The *Hague Yearly Review* was prepared under the direction of Francis Gurry (Director General) and supervised by Carsten Fink (Chief Economist). The report was prepared by a team led by Mosahid Khan; the team comprised Kyle Bergquist, Ryan Lamb, Bruno Le Feuvre and Hao Zhou, all from the Economics and Statistics Division.

Thanks go to Grégoire Bisson from the Brands and Designs Sector for providing valuable comments on drafts at various stages.

Samiah Do Carmo Figueiredo and Caterina Valles Galmès provided valuable administrative support. Gratitude is also due to the Communications Division for the editing and design and to staff in the Printing Plant for their services.

140,127 (+6.2%)
Designs contained in international registrations in force

The Hague System for the International Registration of Industrial Designs allows applicants to register up to 100 different designs through a single international application. Focusing on both the number of applications and the number of designs contained in international applications provides a comprehensive depiction of the use of the Hague System. This Highlights section refers mainly to the number of designs contained in the applications, while the standard figures and tables show the number of Hague applications together with the number of designs contained in those applications.

Statistics on Hague International Registration of Industrial Designs

Highlights

A modest growth in the number of designs contained in Hague applications in 2017

The number of designs contained in applications filed under the Hague System for the International Registration of Industrial Designs of the World Intellectual Property Organization (WIPO) grew by 3.8% in 2017 to reach 19,429 designs (see figure A2). This increase in the number of designs marked 11 years of uninterrupted growth for the Hague System.

However, the total number of applications filed via the Hague System decreased by 6.3% on the previous year, amounting to 5,213 applications in 2017. This follows a 40.6% increase in 2015 and a 35.3% increase in 2016 (see figure A1). The strong growth in applications in 2015 and 2016 was due to the expansion of the Hague System to include Japan, the Republic of Korea and the United States of America (U.S.).

Applicants from at least 56 countries or territories filed at least one Hague application

With the accession of Cambodia in 2017, the total number of Hague members increased to 66. These 66 Hague members offer applicants the possibility to obtain protection for their designs in an area covering a total of 84 countries. The difference between the number of Hague members and the number of countries covered by the System is because the African Intellectual Property Organization (OAPI) and the European Union (EU) are Hague members. By designating these intergovernmental organizations, an applicant can seek protection simultaneously within all their respective member states. In 2017, around 2,160 applicants from at least 56 countries or territories filed at least one Hague international application.

Who were the largest origins of designs filed under the Hague System in 2017?

With 4,261 designs in 2017, applicants based in Germany continue to account for the largest number of designs filed under the Hague System; they were followed by applicants based in Switzerland (2,935), the Republic of Korea (1,742), the U.S. (1,661) and France (1,396). Recent members, the Republic of Korea and the U.S. surpassed both France and Italy in 2016 and are now ranked in third and fourth position, respectively (see figure A10). The top ten origins combined accounted for 80.2% of all designs in 2017, which is similar to their 2016 share.

Among the top 10 origins, Belgium (+189.2%) saw the fastest growth, albeit from a low base (see figure A10). It was followed by the U.S. (+17.8%), France (+15.2%) and Switzerland (+14.9%). The strong growth in Belgium was driven by a single applicant, Drylock Technologies, which sought protection for 315 designs in 2017, compared with 57 designs in 2016. In contrast, the Netherlands (-38.7%) and Turkey (-27%) saw the sharpest declines in 2017. Fonkel Meubelmarketing of the Netherlands sought protection for 490 designs in 2017, compared with 953 in 2016, which explains the sharp drop in design counts for the Netherlands.

Applicants based in Europe accounted for 72.4% of all designs in 2017 (see figure A7). This reflects the membership of the Hague System; the vast majority of Hague members are European countries. Europe was followed by Asia (18.4%) and North America (8.6%). Between 2005 and 2017, Asia saw its share increase by 16.6 percentage points, whereas North America's share increased by 8.6 percentage points (see figure A7). This can largely be attributed to the Republic of Korea becoming a Hague member in 2014, and Japan and the U.S. joining in 2015.

The average number of designs per application varies widely across origins The Hague System allows applicants to register up to 100 different designs through a single international application. However, only a few applicants sought to register the maximum number of designs permitted for a single application. In 2017, only eight applications contained 100 designs per application. For example, I. Paleohorinos Fotistika of Greece, which operates in the decorative lighting industry, filed three applications that contained 100 designs each, and Drylock Technologies of Belgium filed two applications with 100 designs per application.

On average, there were 3.7 designs per application filed in 2017, slightly higher than the previous year (3.4 designs) but considerably fewer than the average of 5.5 designs per application filed in 2007. This can be explained in part by the applications from recent Hague members (i.e., Japan and the Republic of Korea), which contained fewer designs per application compared with those from long-established members Germany and Switzerland. For example, the Republic of Korea had an average of 1.7 designs per application in 2017, compared with an average of 5.9 designs per application for Germany (see figure A11).

The distribution of designs per application varies widely across origins. Among the top eight origins, the Republic of Korea (86.5%) had the highest share of single-design applications, whereas Germany (30%) recorded the lowest share (see figure A12). Applications containing up to two designs accounted for 91% of all applications from the Republic of Korea, while for Germany the share was just 47.2%.

Which companies filed the most designs in 2017?

Two electronics giants from the Republic of Korea, Samsung Electronics (762 designs) and LG Electronics (668 designs), ranked first and second, respectively, in the top applicants list (see table A4). The Netherlands' Fonkel Meubelmarketing (490) dropped from first position in 2016 to third in 2017. It filed 463 fewer designs in 2017 compared with the previous year. Procter & Gamble of the U.S. (488) and Volkswagen of Germany (369) were fourth and fifth, respectively. I. Paleohorinos Fotistika of Greece was ranked sixth with 357 designs. It filed only eight designs in the previous year. The top 10 applicants represent a diverse set of industries, including automobiles, electronics, furnishing, household goods, decorative lighting, software and computer services, and watches and jewelry. The top 50 list for 2017 contains applicants from 18 origins. Germany had the highest number of top-50 applicants from any single country with 16, followed by Switzerland (9) and the U.S. (4).

The share of the number of designs held by the top three applicants from each of the top ten origins ranged from 17.9% in Switzerland to 88.1% in the Republic of Korea (see figure A5). The top Swiss-based applicant, Swatch AG, accounted for 9.7% of all designs from Switzerland, while Samsung Electronics accounted for 43.7% of all designs from the Republic of Korea. For Belgium, Drylock Technologies accounted for 68.9% of all designs – the largest share for a single applicant among the top ten origins.

Where do Hague applicants seek to protect their designs?

The Hague System simplifies the process of multinational registration by creating a single international procedure for protecting a design in multiple jurisdictions. Applicants list the Hague members in whose jurisdictions they wish to protect their designs (known as "designated members"). In 2017, the number of designations in all international applications decreased by 7.9% (see figure A17). However, the number of designs in all designations increased by 5.6%, making 2017 the third successive year of growth (see figure A18). In total, 79,464 designs were contained in all designations made in 2017.

The EU was the most designated Hague member in international applications in 2017, with 3,610 designations containing 15,124 designs (see figure A22). It has been the most designated member since 2010. It was followed by Switzerland (9,604

designs), Turkey (6,615), the U.S. (4,534) and Norway (3,546). Among the top five designated members, Switzerland (+9%) and Turkey (+7.8%) saw strong growth in the number of designs in designations, while the U.S. (-4%) saw a decline.

Applicants can designate every single Hague member in their applications. In 2017, no applicants sought to protect their designs in all member states; however, 2 applications designated 64 Hague members, while 15 applications designated 62 Hague members. A third of all applications included only one designation, while a quarter of all applications included two designations. Only 5.8% of all applications included more than 10 designations (see figure A19).

Which classes are most frequently specified in international applications?

Designs related to furnishing (Class 6; 10.5%) accounted for the largest share of all designs in 2017, closely followed by recording and communication equipment (Class 14; 10.3%) and means of transport (Class 12; 7.6%). Combined, the top ten most specified classes accounted for 70.2% of all designs in 2017, whereas the 10 least specified classes accounted for only 3.8% of all designs (see table A28).

While designs related to furnishing were the most frequently specified class in international applications overall, class shares differed across origins (see table A29). For example, Class 12 was the most frequently specified class in applications from France (15% of all designs); for the Republic of Korea (50.4%), the U.S. (24.2%) and Japan (19%) it was Class 14; and for Switzerland, Class 10 (clocks and watches) accounted for the largest share (31.4%).

Designs contained in international registrations reached a new record in 2017

The International Bureau (IB) recorded 5,041 international registrations containing 19,241 designs in 2017, breaking a 17-year-old record. Registrations declined by 3.7%, while the number of designs in registrations rose by 9.3% – the sixth consecutive year of growth (see figure A33). Holders residing in Germany accounted for 22.6% of all design registrations, followed by holders in Switzerland (15.2%), the U.S. (8.7%), the Republic of Korea (8.3%) and France (6.8%). Each of these origins, except for the Republic of Korea, saw strong growth in registrations between 2016 and 2017. For example, designs contained in registrations from the U.S. grew by 27.5%, while those from Germany increased by 22.1% (see table A34).

Registrations in force have grown for eight consecutive years The number of registrations in force (active registrations) increased by 6.9% in 2017, marking the eighth consecutive year of growth (see figure A43). The approximately 34,700 registrations in force contained around 140,000 designs (see figure A44). Both registrations in force and designs contained in those registrations are concentrated in a small number of countries, with holders residing in Germany (28.1%), Switzerland (19.6%) and France (10.7%) together accounting for around 58.4% of all active designs (see figure A47).

Studying registrations in force by right holders helps to provide insights into the concentration of registrations at the individual and firm level. In 2017, two-thirds of firms or individuals holding an active registration had only one registration in their portfolio (see figure A48). Another 13.9% of holders owned only two active registrations, and holders with three active registrations accounted for 6.2% of the total. Only 31 portfolios had more than 100 active registrations, with 1 holder having 1,174 active registrations. The distribution of active registrations has remained more or less unchanged over the past few years.

Cost of registration through the Hague System

The average fee per Hague international registration amounted to CHF 1,837 in 2017, a small increase on the previous year (see figure A51). The fee per registration ranged from CHF 439 for two single-design registrations to CHF 49,438 for a single registration that designated 62 Hague members and contains 23 designs. Three-quarters of all registrations paid less than CHF 2,000 per registration, and only 11.5% of all registrations paid more than CHF 3,000 per registration.

Hague international applications

This subsection presents statistics on Hague international applications for the international registration of industrial designs. Statistics are presented for both the number of applications and the number of designs contained in applications.

The total number of Hague international applications decreased by 6.3% in 2017, following two successive years of double-digit growth.

| 48 | EWALD SCHILLIG GMBH & CO. KG | Germany | 4 | 2 | 4 | 110 | 38 | 64 | |
| 48 | ZEHNDER GROUP INTERNATIONAL AG | Switzerland | 8 | 4 | 9 | 52 | 29 | 64 | |
| 50 | LENOVO (BEIJING) CO., LTD. | China | 9 | 19 | 11 | 20 | 59 | 62 | |
| | | | | | | | | | |

Note: Rank is based on the number of designs contained in applications in 2017. Applicants residing in a non-member country can file an application for international registration if they have a real and effective industrial or commercial establishment within the jurisdiction of a Hague member. For example, China is not a member of the Hague System, but China's Lenovo filed 11 Hague applications containing 62 designs in 2017 via another Hague member.

Source: WIPO Statistics Database, May 2018.

The top three applicants accounted for 88.1% of all designs originated from the Republic of Korea in 2017.

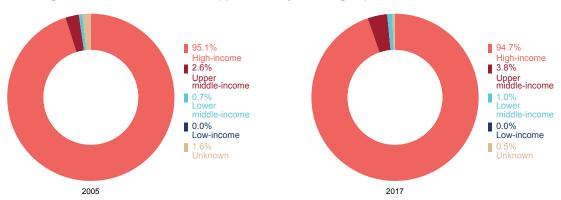

A5. Share of the top three applicants for the top ten origins, 2017

^{..} indicates zero.

High-income countries account for the bulk of Hague filing activity, reflecting Hague System membership.

A6. Designs contained in international applications by income group, 2005 and 2017

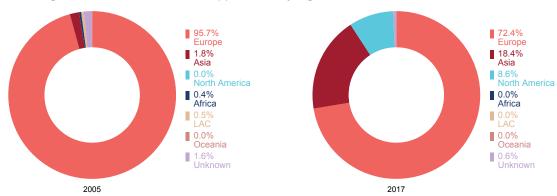

Note: Each income group includes the following number of countries or territories that had filed at least one design application in either 2005 or 2017: high-income (43), upper middle-income (8), lower middle-income (9) and low-income (0). Income groups are defined by the World Bank's income classifications.

Source: WIPO Statistics Database, May 2018.

Europe accounted for 72.4% of total designs in 2017, while Asia accounted for 18.4%.

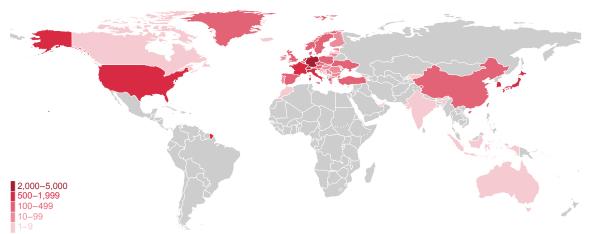

A7. Designs contained in international applications by region, 2005 and 2017

Note: Each geographical region includes the following number of countries or territories that had filed at least one design application in either 2005 or 2017: Africa (3), Asia (14), Europe (38), Latin America and the Caribbean (LAC; 2), North America (2) and Oceania (1). Regions are defined according to United Nations definitions.

Use of the Hague System is highly concentrated in a few origins.

A8. Designs contained in international applications by origin, 2017

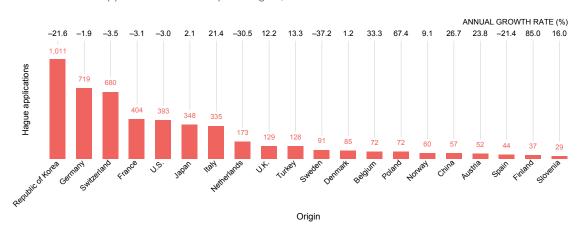

Note: The origin of an application is defined as the country/territory of the stated address of residence of the applicant. Applicants residing in a non-member country can file applications for international registrations if they have a real effective industrial or commercial establishment within the jurisdiction of a Hague member.

Source: WIPO Statistics Database, May 2018.

Applicants from the Republic of Korea filed more than 1,000 Hague applications in 2017.

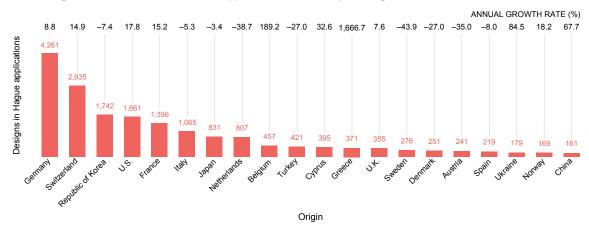

A9. International applications for the top 20 origins, 2017

Note: The origin of an application is defined as the country/territory of the stated address of residence of the applicant. Applicants residing in a non-member country can file applications for international registrations if they have a real effective industrial or commercial establishment within the jurisdiction of a Hague member. For example, China is not a member of the Hague System, but it is ranked the sixteenth top user of the Hague System. The top 20 origins were selected based on the number of applications filed in 2017.

Applicants based in Germany accounted for the largest number of designs, followed by Switzerland.

A10. Designs contained in international applications for the top 20 origins, 2017

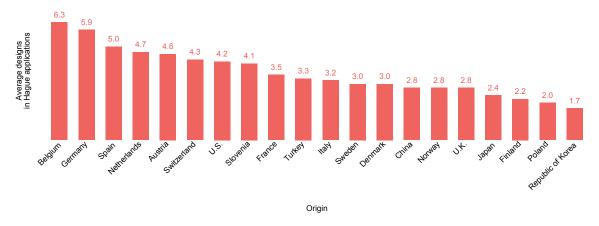

Note: The origin of an application is defined as the country/territory of the stated address of residence of the applicant. Applicants residing in a non-member country can file applications for international registrations if they have a real and effective industrial or commercial establishment within the jurisdiction of a Hague member. The top 20 origins were selected based on the number of designs contained in applications filed in 2017.

Source: WIPO Statistics Database, May 2018.

Applications from Belgium, Germany and Spain contain an average of five or more designs per application.

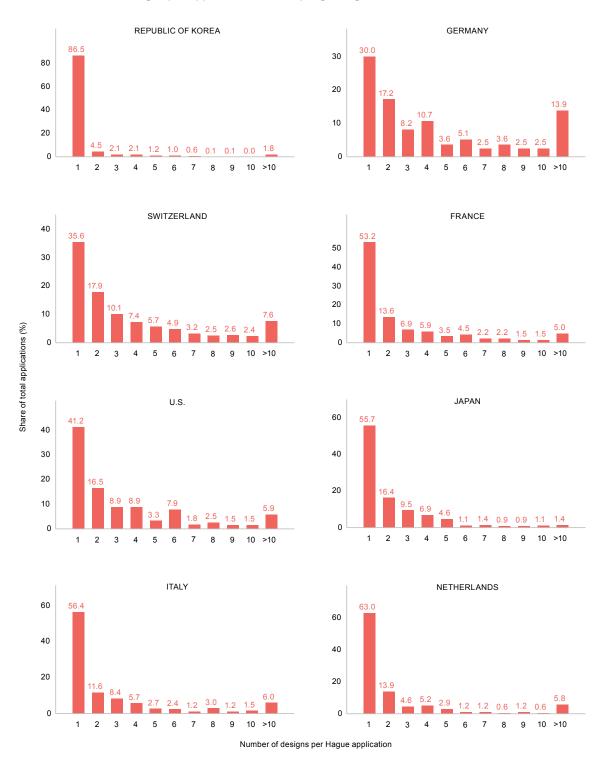

A11. Average number of designs per international application for the top 20 origins, 2017

Note: The origin of an application is defined as the country/territory of the stated address of residence of the applicant. Applicants residing in a non-member country can file applications for international registrations if they have a real and effective industrial or commercial establishment within the jurisdiction of a Hague member.

For the top eight origins, the shares of single-design applications ranged from 86.5% for the Republic of Korea to 30% for Germany.

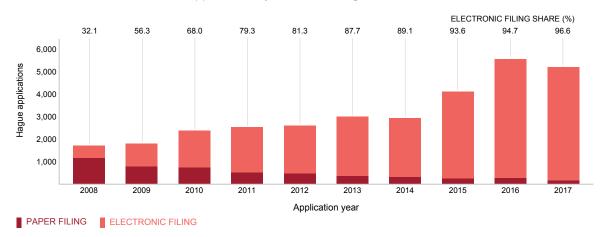

A12. Distribution of designs per application for the top eight origins, 2017

Note: The top eight origins are based on the number of Hague applications as reported in figure A9.

Electronic filings accounted for 96.6% of all Hague international applications in 2017.

A13. Distribution of international applications by medium of filing, 2008–2017

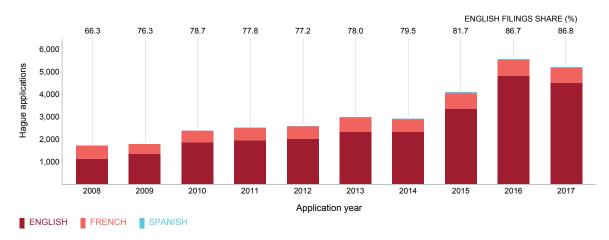

Note: Applications for industrial designs are filed in paper form or through the International Bureau's electronic filing (E-Filing) system. Electronic filing in English was introduced in 2008, and as of 2010 it has also been possible to file electronically in French and Spanish.

Source: WIPO Statistics Database, May 2018.

The share of applications filed in English has remained stable for the past two years – around 87%.

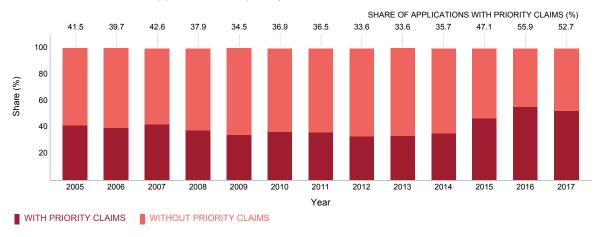

A14. Distribution of international applications by language of filing, 2008–2017

Note: International applications may be filed in English, French or Spanish.

Around 47% of all Hague applications filed in 2017 did not contain priority claims.

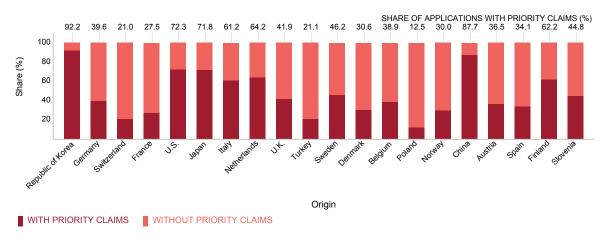

A15. Trend in international applications with priority claims, 2005–2017

Source: WIPO Statistics Database, May 2018.

The Republic of Korea had the highest share of applications with priority claims

A16. Share of international applications with priority claims for the top 20 origins, 2017

Geographical coverage of Hague international applications

The Hague System simplifies the process of multinational registration by creating a single international procedure for protecting a design in multiple jurisdictions. Applicants list the Hague members in whose jurisdictions they wish to protect their designs (known as "designated members"). This subsection presents statistics on designations in order to provide insights into the geographical coverage of international applications.

Following two successive years of strong growth, the total number of designations in Hague applications declined in 2017.

A17. Trend in designations in international applications, 2005–2017

■ DESIGNATIONS IN HAGUE APPLICATIONS ■ GROWTH RATE (%)

Source: WIPO Statistics Database, May 2018

The number of designs contained in designations increased for the third successive year in 2017.

A18. Trend in the number of designs contained in designations in international applications, 2005–2017

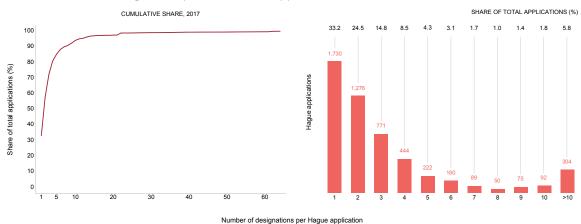

■ DESIGNS IN DESIGNATIONS IN HAGUE APPLICATIONS

■ GROWTH RATE (%)

A third of all Hague applications included only one designation.

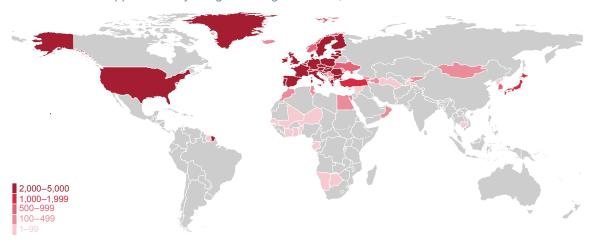

A19. Distribution of designations per international application, 2017

Source: WIPO Statistics Database, May 2018.

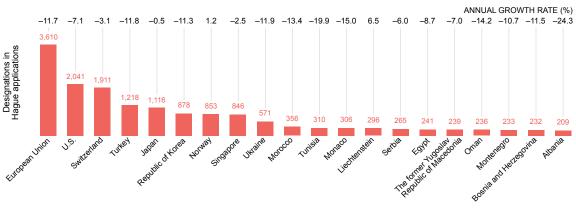

The top five designated Hague members accounted for half of all designations in 2017.

A20. International applications by designated Hague member, 2017

All of the top 20 designated Hague members, except Liechtenstein and Norway, received fewer designations in 2017 than in 2016.

A21. Designations in international applications for the top 20 designated Hague members, 2017

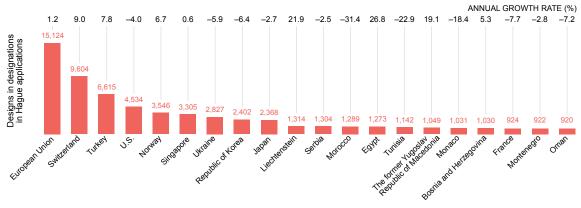

Hague member

Source: WIPO Statistics Database, May 2018.

The European Union and Switzerland continue to attract the most designs in designations.

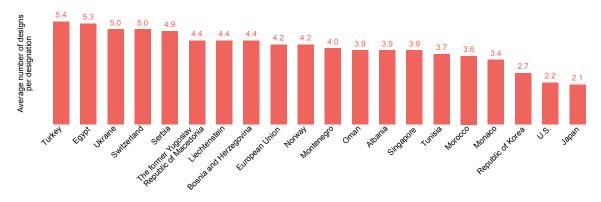

A22. Designs contained in designations in international applications for the top 20 designated Hague members, 2017

Hague member

Designated Hague members Japan, the Republic of Korea and the U.S. had the fewest average number of designs per designation in 2017.

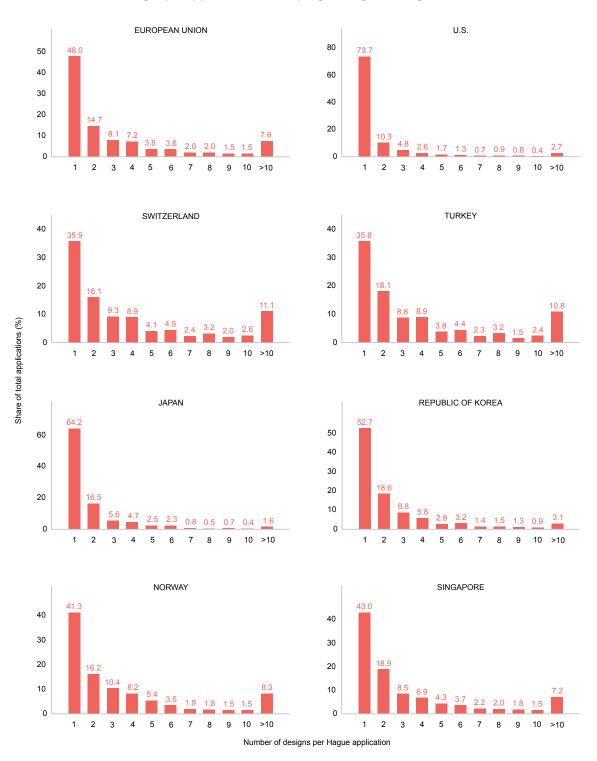

A23. Average number of designs per designation for the top 20 designated Hague members, 2017

Hague member

For the top eight designated Hague members, the share of single-design applications ranged from 73.7% for the U.S. to 35.8% for Turkey.

A24. Distribution of designs per application for the top eight designated Hague members, 2017

Note: The top eight designated members are based on the number of designations in Hague applications as reported in figure A21.

Non-resident applications by filing route

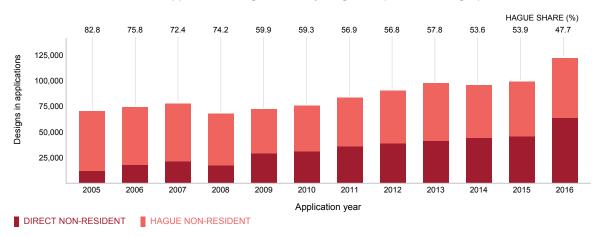

| A26 | Trends in non-resident application design counts by filing route | |
|-----|---|----|
| | (direct and Hague), 2005–2016 | 29 |
| A27 | Non-resident application design counts by filing route for selected | |
| | Hague members, 2016 | 29 |

Non-resident applications by filing route

Applicants seeking design protection in foreign jurisdictions can either file applications directly with national or regional intellectual property (IP) offices (i.e., the Paris route) or, where requirements are met, make use of the Hague System. This subsection presents non-resident application statistics by filing route in order to provide insights into the use of the two routes for non-resident applications.

Around 48% of non-resident applications were filed via the Hague System in 2016.

A26. Trends in non-resident application design counts by filing route (direct and Hague), 2005–2016

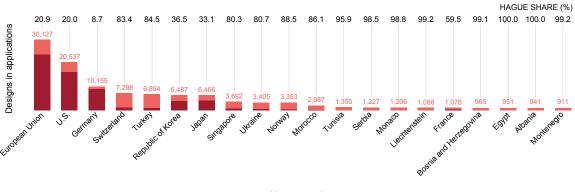

Note: Direct application data are available only up to 2016, so 2017 Hague designation data are not reported. The direct route refers to applications filed directly with national or regional IP offices of Hague members only. The Hague route refers to designations received by offices via the Hague System. For the sake of simplicity, designations are referred to as applications received via the Hague route. The Hague share of non-resident applications has declined from 53.9% in 2015 to 47.7% in 2016, which is mainly explained by the accession of Japan and the U.S. to the Hague System in 2015. Those two members have a high share of direct non-resident filings.

Source: WIPO Statistics Database, May 2018.

The majority of the 20 reported Hague members received more than 80% of the non-resident applications through the Hague System.

A27. Non-resident application design counts by filing route for selected Hague members, 2016

Hague member

DIRECT NON-RESIDENT HAGUE NON-RESIDENT

Note: Direct application data are available only up to 2016, so 2017 Hague designation data are not reported. The direct route refers to applications filed directly with national or regional IP offices of Hague members only. The Hague route refers to designations received by offices via the Hague System. For the sake of simplicity, designations are referred to as applications received via the Hague route.

Hague international applications by class and industry sector

| A28 | Designs contained in international applications by class, 2014–2017 | 31 |
|-----|--|----|

| A30 | Distribution of designs contained in applications by the top three sectors | |
| | for the top ten origins, 2017 | 33 |
| A31 | Designs contained in international applications by class and designated | |
| | Hague member, 2017 | 34 |

Hague international applications by class and by industry sector

The Hague System makes it possible to file, via a single application, up to 100 industrial designs belonging to the same class of the International Classification for Industrial Designs established under the Locarno Agreement. This subsection presents Hague design statistics by class and by industry sector in order to provide insights into the goods incorporating the designs.

Furnishing accounted for the largest share of total designs (10.5%) in 2017, closely followed by recording and communication equipment (10.3%).

A28. Designs contained in international applications by class, 2014–2017

| Class | 2014 | 2015 | 2016 | 2017 | Growth rate (%): 2016–17 | 2017 share of total (%) |

Hague international registrations and refusals

International applications are recorded in the International Register if they fulfill all the requirements of the formal examination conducted by the IB. Designated offices can refuse to grant protection for an international registration. If an IP office refuses to grant protection, it must notify the IB of this decision within 6 or 12 months from the date on which the registration was published in the *International Designs Bulletin*. This subsection presents statistics for international registrations and refusals.

Following strong growth in 2015 and 2016, international registrations decreased by 3.7% in 2017.

A32. Trend in international registrations, 2005–2017

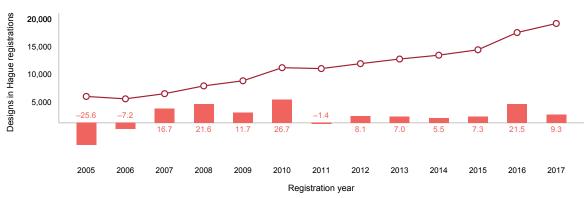

■ HAGUE REGISTRATIONS ■ GROWTH RATE (%)

Renewals of international registrations and registrations in force

International registrations are valid for a period of five years and can be renewed for two additional five-year periods. The maximum duration of protection in each Hague member's jurisdiction depends on the legislation of the granting authority. International registrations must be renewed in order to remain valid. During the renewal process, holders can designate all or only some of the Hague members designated in the initial registration. Holders can also opt to renew all or only some of the designs contained in the initial registration.

Around 3,300 international registrations were renewed in 2017, a 4.7% increase on 2016.

A38. Trend in renewals of international registrations, 2005-2017

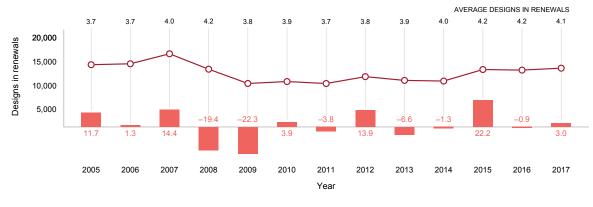

■ RENEWALS ■ GROWTH RATE (%)

| A50 | Fees distributed to Hague members by the IB, 2016–2017 | 47 |
| A51 | Registration fees, 2008–2017 | 49 |

Fees collected and distributed by the International Bureau (IB)

The IB collects fees for its services relating to the registration, renewal and maintenance of industrial designs. These fees comprise a basic standard fee per application and per design together with a fee for each designated Hague member. The IB also collects the standard and individual designation fees on behalf of designated Hague members and distributes them accordingly.

The IB fee share has declined considerably over the past 13 years.

A49. Trend in fees collected by the IB, 2005-2017

Source: WIPO Statistics Database, May 2018.

Japan received 23.5% of the CHF 6.3 million distributed among Hague members in 2017.

Note: Only countries/territories of origin and designated Hague member countries or jurisdictions for which Hague System statistics exist for 2017 are listed.

- (b) The country is a member of the Hague System via its membership of the European Union.
- (c) The IP office is the Benelux Office for Intellectual Property.
- n.a. indicates not applicable.
- .. indicates zero.

¹ Origin is defined as the country/territory of the stated address of residence of the holder of the international application.

⁽a) Not a member of the Hague System. Applicants from this country are able to file via the Hague System by claiming commercial activity or domicile in a country or in the jurisdiction of a regional office that is a member of the Hague System. The IP office of the country cannot be designated by an applicant that uses the Hague System.

Applicants from this country are able to file via the Hague System by claiming commercial activity or domicile in a country or in the jurisdiction of a regional office that is a member of the Hague System. The IP office of the country cannot be designated by an applicant that uses the Hague System.
- n.a. indicates not applicable.
- .. indicates zero.

A brief presentation of the Hague System

Introduction

The WIPO-administered Hague System for the International Registration of Industrial Designs comprises two international treaties: the Hague Act (1960) and the Geneva Act (1999). If the Hague System had not been established, the procedure for protecting designs in multiple jurisdictions would involve filing a separate application with each national or regional intellectual property (IP) office. The Hague System simplifies this process by creating a single international procedure for the protection of a design in multiple jurisdictions. It makes it possible for an applicant to obtain protection for up to 100 industrial designs for products belonging to the same class in multiple jurisdictions by filing a single application with the International Bureau (IB) of WIPO. It also simplifies the subsequent management of the industrial design, since it is possible to record changes or renew the registration through a single procedural step.

As of December 31, 2017, the Hague System comprised 66 members. These 66 Hague members offer applicants the possibility to obtain protection for their designs in an area covering a total of 84 countries. The difference between the number of Hague members and the number of countries covered by the

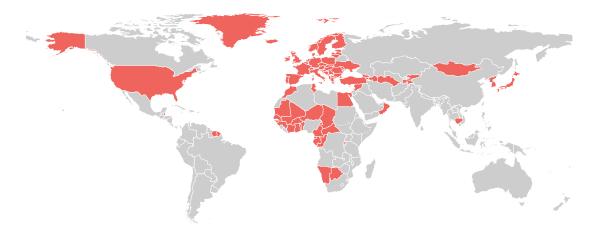

System is due to the fact that the African Intellectual Property Organization (OAPI) and the European Union (EU) are Hague members. By designating these intergovernmental organizations, an applicant can seek protection simultaneously within all their respective member states.

Advantages of the Hague System

The Hague System lowers transaction costs for design registrations through the creation of a single application in one language, with one set of fees in a single currency denomination. Applicants are therefore not burdened by having to apply at multiple offices, which would mean they would have to deal with different formalities in different languages, and would involve purchasing several currency denominations and paying varying fees.

The System also simplifies the subsequent management of international registrations. Applications are handled through a single institution, which allows future amendments to registrations and renewals of registrations to be carried out by a single office (the IB) rather than requiring the designer/holder of the registration to request such amendments at multiple IP offices.

Hague members in 2017

International application and registration procedures

When deciding to seek protection for designs in multiple jurisdictions, an applicant can file separate applications with each office directly ("the Paris route") or file a single international application through the Hague System. The overview of industrial design registration process (shown opposite) illustrates the procedure for filing applications in multiple jurisdictions via the Hague System.

An international application¹ is normally filed directly with the IB,² which is responsible for carrying out an examination to verify that the application meets all formal requirements. In case of noncompliance, applicants are invited to correct the application within a three-month time limit. If corrections are not made in time, the application is considered abandoned. The IB does not undertake substantive examination (for example, for novelty of design) and therefore cannot reject an application based on substantive grounds. The decision whether or not to grant protection remains the prerogative of national or regional offices, and the rights are limited to the jurisdiction of the granting authority.

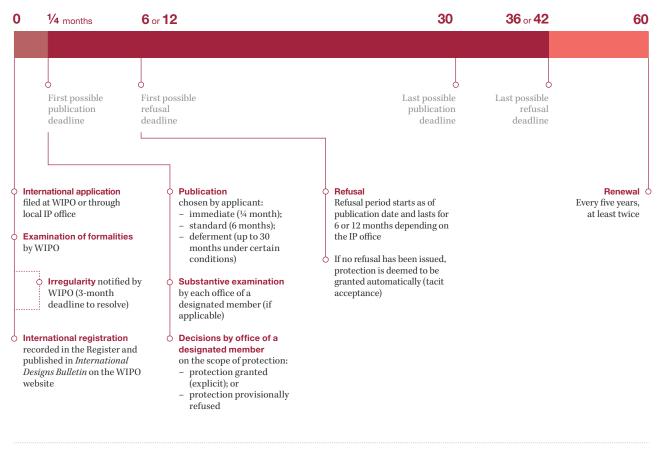

International applications are recorded in the International Register if they fulfill all the requirements of the formal examination conducted by the IB. The general rule is that international registrations are published in the International Designs Bulletin (IDB) six months after the date of international registration, unless applicants request an immediate publication or a deferment of publication.3 Once the registrations are published in the IDB, national and regional offices identify those international registrations that have designated their country or intergovernmental organization, and then carry out a substantive examination according to their respective national or regional legislation, if any.4 If an office refuses to issue protection, it must notify the IB of the refusal within six months from the date of publication of the international registration in the IDB.5 In the case of refusal, applicants have the same right of appeal as those who file directly with the national or regional office.⁶ However, if the IB does not receive a notification of refusal from a national or regional office within the prescribed time limit, the international registration is considered valid within that jurisdiction and has effect as a grant of protection in the jurisdiction concerned.7

International registrations are valid for a period of five years and may be renewed for at least two additional five-year periods. The maximum duration of protection afforded by each designated Hague member depends on the locally applicable legislation. The IB administers the renewal process.

For more information on the Hague System, visit: www.wipo.int/hague

- An international application does not require a prior national application or registration. It must be filed in one of the working languages English, French or Spanish and list the designated members (that is, states or intergovernmental organizations such as the EU or the OAPI) in which protection is sought.
- 2 An international application may be filed directly with the IB or indirectly through a national/regional IP office of the applicant's choice. Under certain conditions, and under the Hague Act only, an international application must be filed through a national IP office.
- 3 An applicant can defer publication for up to 12 months under the Hague Act, or for up to 30 months under the Geneva Act.
- 4 Some offices carry out substantive examination for every design, whereas others automatically issue protection for designs barring opposition by third parties.
- 5 Under certain circumstances, and under the Geneva Act only, the time period for notifying the IB of a refusal is 12 months instead of 6 months.
- 6 The applicant can appeal against a refusal according to the rules and regulations outlined in the domestic/regional legislation of the office refusing protection.
 The IB is not involved in this procedure.
- In some cases, national or regional offices notify the IB that protection is granted for an international registration by sending a Statement of Grant, However, where an office does not provide the IB with a statement, the international registration is nevertheless valid unless the office refuses the registration and communicates the refusal to the IB within the prescribed time limit (that is, within 6 months or 12 months, as the case may be)

Overview of the industrial design registration process

Benefits

- Apply just once in one language for registration of up to a 100 industrial designs for products belonging to one and the same class in multiple jurisdictions
- Pay one set of fees in a single currency
- Time the publication of your registration to fit your business strategy
- Manage renewals and registration changes through a single central system

Data description

Data are compiled by WIPO on the processing of international applications, registrations and renewals through the Hague System for the International Registration of Industrial Designs. Complete data exist up to calendar year 2017. However, figures shown in this *Review* are subject to change. For example, country of origin information for 35 international Hague applications was missing at the time of data extraction. When this information becomes available, applications by origin statistics for a few countries may change, but the change will be minimal. Regular updates are available at *www.wipo.int/ipstats*.

Statistics on direct non-resident (Paris route) applications at national and regional IP offices are extracted from the WIPO Statistics Database, primarily based on WIPO's Annual IP Survey. The latest available year for complete direct applications data is therefore 2016.

Income groups correspond to those used by the World Bank (http://data.worldbank. org/about/country-and-lending-groups) and groupings by region are based on the United Nations (UN) definition of regions (https://unstats.un.org/unsd/methodology/m49/). Although the geographical terms used by WIPO may differ slightly from those defined by the UN, the composition of regions and subregions remains identical.

Glossary

This glossary provides definitions of key technical terms and concepts.

Applicant: An individual or other legal entity that files an application for an industrial design. There may be more than one applicant in an application. For the statistics in this publication, the name of the first named applicant is used to determine the origin of the application.

Application: The procedure for requesting industrial designs rights at an office which then examines the application and decides whether to grant protection. Also refers to a set of documents submitted to an office by the applicant.

Application date: The date on which an IP office or the IB receives an application that meets the requirements for registration of an industrial design.

Class: Refers to the classes defined in the Locarno Classification. Classes indicate the categories of products for which industrial design protection is requested. (See "Locarno Classification".)

Design count: The number of designs contained in an industrial design application or registration. Under the Hague System for the International Registration of Industrial Designs, it is possible for an applicant to obtain protection for up to 100 industrial designs for products belonging to one and the same class by filling a single application. Some national or regional IP offices allow applications to contain more than one design for the same product or within the same class, while others allow only one design per application. In order to capture the differences in application and registration numbers across offices, it is useful to compare their respective application and registration design counts.

Designation: Designation in an international application or registration means the request by which the applicant/international registration holder specifies the jurisdiction(s) in which they seek to protect their industrial designs.

Direct filing: See "National route".

European Union Intellectual Property Office (EUIPO): The EUIPO is the office responsible for managing the EU trademark and the registered community design. The validity of these two intellectual property rights extends across the jurisdictions of the EU's 28 member states.

Filing: See "Application".

Hague international application: An application for the international registration of an industrial design filed under the WIPO-administered Hague System.

Hague international registration: An international registration issued via the Hague System, which facilitates the acquisition of industrial design rights in multiple jurisdictions. An application for international registration of an industrial design leads to its recording in the International Register and the publication of the registration in the *International Designs Bulletin (IDB)*. If the registration is not refused by the IP office of a designated Hague member, the international registration will have the same effect as a registration made in that jurisdiction.

Hague member (Contracting Party): A state or intergovernmental organization that is a member of the Hague System. Includes any state or intergovernmental organization party to the Geneva Act of 1999 and/or the Hague Act of 1960. Entitlement to file an international application under the Hague Agreement is limited to natural persons or legal entities having a real and effective industrial or commercial establishment, or a domicile, in at least one of the Contracting Parties to the Agreement, or being a national of one of those Contracting Parties or of a member state of an intergovernmental organization that is a Contracting Party. In addition – but only under the 1999 Act – an international application may be filed on the basis of habitual residence in the jurisdiction of a Contracting Party.

Hague route: An alternative to the Paris route (i.e., the direct national or regional route), the Hague route enables an application for international registration of industrial designs to be filed using the Hague System.

Hague System: The abbreviated form of the Hague System for the International Registration of Industrial Designs. This System comprises two international treaties: the Hague Act of 1960 and the Geneva Act of 1999. The Hague System makes it possible for an applicant to register up to 100 industrial designs in multiple jurisdictions by filing a single application with the International Bureau (IB) of WIPO. It simplifies multinational registration by reducing the requirement to file separate applications with each IP office. The System also simplifies the subsequent management of the industrial design, since it is possible to record changes or renew a registration through a single procedural step.

Industrial design: Industrial designs are applied to a wide variety of industrial products and handicrafts. They refer to the ornamental or aesthetic aspects of a useful article, including compositions of lines or colors or any three-dimensional forms that give a special appearance to a product or handicraft. The holder of a registered industrial design has exclusive rights against unauthorized copying or imitation of the design by third parties. Industrial design registrations are valid for a limited period. The term of protection is usually 15 years in most jurisdictions. However, differences in legislation exist, notably in China (which provides for a 10-year term from the application date).

Intellectual property (IP): Creations of the mind: inventions; literary and artistic works; symbols, names and images used in commerce. IP is divided into two categories: industrial property – which includes patents, utility models, trademarks, industrial designs and geographical indications of source – and copyright – which includes literary and artistic works such as novels, poems, plays, films, musical works, artistic works (such as drawings, paintings, photographs and sculptures) and architectural designs. Rights related to copyright include those of performing artists in their performances, those of producers of sound recordings in their recordings and those of broadcasters in their radio and television programs.

International Bureau (IB) of WIPO: In the context of the Hague System, the International Bureau of WIPO acts as a receiving office for international applications. International applications are filed directly with the IB or indirectly through the IP office of a Contracting Party. The IB handles processing tasks with respect to these applications and the subsequent management of Hague System registrations.

International Designs Bulletin (IDB): The official publication of the Hague System, containing data on new international registrations, as well as renewals and modifications affecting existing international registrations. It is published on the WIPO website at www. wipo.int/hague/en/bulletin.

International Register: A register maintained by the IB in which it registers industrial designs applied for in international applications that conform to the applicable requirements.

International registrations in force: International registrations that are currently valid. To remain in force, international registrations must be renewed by paying a renewal fee to the International Bureau after each five-year term of protection. The period of protection of a designation of a Contracting Party in an international registration must be at least 15 years, subject to renewal of that designation. However, depending on the domestic laws of individual Contracting Parties, the period of protection may be longer than 15 years. For example, under the legislation of Switzerland, the period of protection of industrial design registrations is 25 years, subject to renewal.

Locarno Classification (LOC): The abbreviated form of the International Classification for Industrial Designs under the Locarno Agreement, used for registering industrial designs. The LOC comprises a list of 32 classes and their respective subclasses with explanatory notes plus an alphabetical list of the goods in which industrial designs are incorporated and an indication of the classes and subclasses into which they fall.

Maintenance: An act by the applicant to keep an IP grant/registration valid (in force), primarily by paying the required fee to the IP office of the state or jurisdiction providing protection. That fee is also known as a "maintenance fee". Industrial designs can be maintained for only a limited number of years (see "Renewal").

National route: Applications for industrial design protection filed directly with the national office of, or acting for, the relevant state/jurisdiction (see also "Hague route"). The national route is also called the "direct route" or "Paris route".

Non-resident application: For statistical purposes, a non-resident application refers to an application filed with the IP office of, or acting for, a state or jurisdiction in which the first named applicant in the application is not domiciled. For example, an application filed with the Japan Patent Office (JPO) by an applicant residing in France is considered a non-resident application from the perspective of the JPO. Non-resident applications are sometimes referred to as foreign applications.

Opposition: An administrative process for disputing the protection of an industrial design that is often limited to a specific time period after the industrial design has been published. For the Hague System, opposition rules are defined by national laws; however, national IP offices must provide any refusal process on the grounds of opposition within 6 or 12 months (depending on the Hague member concerned) from the publication date of the international registration in the *International Designs Bulletin*.

Origin (country or region): For statistical purposes, the origin of an application means the country or territory of residence of the first named applicant in the application. In some cases (notably in the U.S.), the country of origin is determined by the residence of the assignee rather than that of the applicant.

Paris Convention: The Paris Convention for the Protection of Industrial Property (1883), signed on March 20, 1883, is one of the most important treaties, as it establishes general principles applicable to all IP rights. It establishes the "right of priority" that enables an IP applicant, when filing an application in countries other than the original country of filling, to claim priority of an earlier application filed up to 12 months previously for patents and utility models, and up to six months previously for trademarks and industrial designs.

Paris route: An alternative to the Hague route, the Paris route (also called the "direct route" or "national route") enables individual IP applications to be filed directly with an office that is a signatory to the Paris Convention.

Priority date: The filing date of the application on the basis of which priority is claimed. (See "Paris Convention".)

Publication date: The general rule is that international registrations are published in the *International Designs Bulletin* six months after the date of registration, unless applicants request an immediate publication or a deferment of publication. Publication of an international registration can be deferred for up to 12 months under the Hague Act, or for up to 30 months under the Geneva Act.

Regional application (registration): An application filed with (or registered by) an IP office having regional jurisdiction over more than one country. There are currently three regional offices that are members of the Hague System: the African Intellectual Property Organization (OAPI), the Benelux Office for Intellectual Property (BOIP) and the European Union Intellectual Property Office (EUIPO).

Registered Community Design (RCD): A registration issued by the EUIPO based on a single application filed directly with the office by an applicant seeking protection within the EU as a whole.

Registration: An exclusive set of rights legally accorded to the applicant when an industrial design is issued. Registrations are issued to applicants to make use of and exploit their industrial design for a limited period of time.

Renewal: The process by which the protection of industrial design rights is maintained (i.e., kept in force). Usually consists of paying renewal fees to an IP office at regular intervals. If renewal fees are not paid, the international registration may lapse. (See also "Maintenance".)

Resident application: For statistical purposes, a "resident" application refers to an application filed with the IP office of, or acting for, the state or jurisdiction in which the first named applicant in the application has residence. For example, an application filed with the JPO by a resident of Japan is considered a resident application for the JPO. Resident applications are sometimes referred to as "domestic applications." A resident grant/registration is an IP right issued on the basis of a resident application.

Statement of Grant: A voluntary communication from an IP office to the IB informing it that an industrial design has been granted protection within its jurisdiction.

World Intellectual Property Organization (WIPO):

A United Nations specialized agency dedicated to the promotion of innovation and creativity for the economic, social and cultural development of all countries through a balanced and effective international IP system. WIPO was established in 1967 with a mandate to promote the protection of IP throughout the world through cooperation among states and in collaboration with other international organizations.
