

PCT COR Replacement system PADOS

Peter Waring
Head Technical Cooperation, PCT International Cooperation Division

PADOS Introduction

The PCT COR system is being replaced by a new system:
PCT Automated Document Ordering system (PADOS)

The following slides give an overview of why the PCT-COR system is being replaced and the differences Offices can expect when using the new PADOS system.

PCT COR – Renovation rationale

The PCT COR system was introduced in 2002/3 and has not been significantly updated since.

- It is based on old versions of PCT database libraries and JAVA – it has become difficult to install
- The electronic document delivery formats are no longer compatible with the latest formats sent by PCT
- Document types limited to A20 / R87

date

PCT COR – Renovation PADOS

PADOS is the working project name and may be changed. A production pilot phase is ongoing since Q2 2011.

- All 'PATENTSCOPE®' document types available
- Ordering system (simplified) and IA Subscription lists (new)
- Profile management for document type selection
- Output formatting updated (similar to PCT Forms via EDI)
- Delivery via DVD or EDI (only)

PADOS Overview

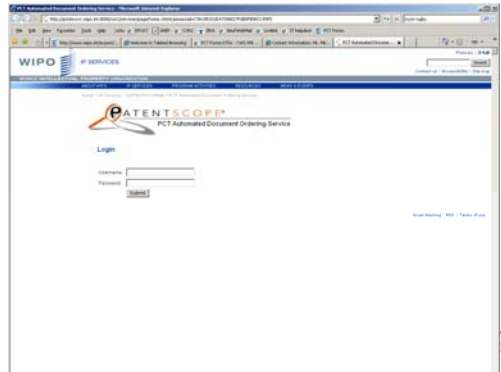

The PADOS system is a browser based application available to Offices via a username and password account. The following slides show a screenshot demonstration of the system giving examples of:

- The User logon and menu screens
- Ordering and upload format checking
- Order History
- Subscription lists and profiles
