

PCT FAQs

Protecting your Inventions Abroad:
Frequently Asked Questions About
the Patent Cooperation Treaty (PCT)

Overview of the PCT System

INTRODUCTION

These frequently asked questions about the Patent Cooperation Treaty (PCT) outline the PCT procedure from an applicant's perspective. For specific questions, further information and contact points, see Question 29.

1) What is the Patent Cooperation Treaty (PCT)?

The PCT is an international treaty with more than 150 Contracting States.¹ The PCT makes it possible to seek patent protection for an invention simultaneously in a large number of countries by filing a single "international" patent application instead of filing several separate national or regional patent applications. The granting of patents remains under the control of the national or regional patent Offices in what is called the "national phase".

The PCT procedure includes:

Filing: you file an international application with a national or regional patent Office or WIPO, complying with the PCT formality requirements, in one language, and you pay one set of fees.

International Search: an "International Searching Authority" (ISA) (one of the world's major patent Offices) identifies the published patent documents and technical literature ("prior art") which may have an influence on whether your invention is patentable, and establishes a written opinion on your invention's potential patentability.

International Publication: as soon as possible after the expiration of 18 months from the earliest filing date, the content of your international application is disclosed to the world.

Supplementary International Search (optional): a second ISA identifies, at your request, published documents which may not have been found by the first ISA which carried out the main search because of the diversity of prior art in different languages and different technical fields.

International Preliminary Examination (optional): one of the ISAs at your request, carries out an additional patentability analysis, usually on an amended version of your application.

National Phase: after the end of the PCT procedure, usually at 30 months from the earliest filing date of your initial application, from which you claim priority, you start to pursue the grant of your patents directly before the national (or regional) patent Offices of the countries in which you want to obtain them.

2) How do I protect my invention in several countries?

Patents are territorially limited. In order to protect your invention in multiple countries you have a few options:

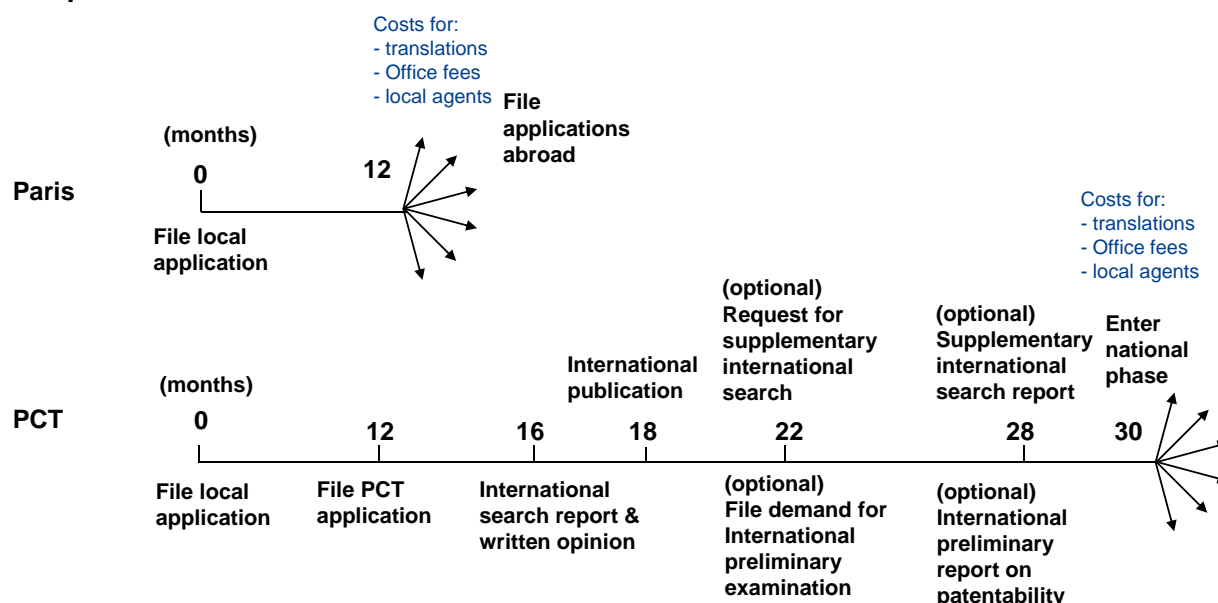

- (a) Direct or Paris route: you can directly file separate patent applications at the same time in all of the countries in which you would like to protect your invention (for some countries, regional patents may be available) or, having filed in a Paris Convention country (one of the Member States of the Paris Convention for the Protection of Industrial Property), then file separate patent applications in other Paris Convention countries within 12 months from the filing date of that first patent application, giving you the benefit in all those countries of claiming the filing date of the first application (see Question 11);

¹

The list of those States can be found on the WIPO website at www.wipo.int/pct/en/pct_contracting_states.html.

- (b) PCT route: you can file an application under the PCT, directly or within the 12-month period provided for by the Paris Convention from the filing date of a first application, which is valid in all Contracting States of the PCT and, therefore, simpler, easier and more cost-effective than both, direct or Paris route filings.

Comparison of Paris and PCT Route

3) Who uses the PCT?

The PCT is used by the world's major corporations, research institutions, and universities when they seek international patent protection. It is also used by small and medium-sized enterprises (SMEs) and individual inventors. The *PCT Newsletter* (see www.wipo.int/edocs/pctndocs/en/2017/pct_news_2017_3.pdf) contains a yearly list of the largest PCT filers.

FILING

4) What is the effect of an international patent application?

In general terms, your international patent application, provided that it complies with the minimum requirements for obtaining an international filing date, has the effect of a national patent application (and certain regional patent applications) in or for all PCT Contracting States. Moreover, if you comply with certain formal requirements set out in the Treaty and Regulations, which are binding on all of the PCT Contracting States, subsequent adaptation to varying national (or regional) formal requirements (and the cost associated therewith) will not be necessary.

5) Who has the right to file an international patent application under the PCT?

You are entitled to file an international patent application if you are a national or resident of a PCT Contracting State. If there are several applicants named in the international application, only one of them needs to comply with this requirement.

6) Where can I file my international patent application?

You can file an international patent application, in most cases, with your national patent Office, or directly with WIPO if permitted by your State's national security provisions. Both of those Offices act as PCT "receiving Offices". If you are a national or resident of a country

which is party to the ARIPO Harare Protocol, the OAPI Bangui Agreement, the Eurasian Patent Convention or the European Patent Convention, you may alternatively file your international patent application with the regional patent Office concerned, if permitted by the applicable national law.

7) Can I file PCT applications electronically?

In the majority of cases, applicants file PCT applications electronically. You can file PCT applications electronically with any competent receiving Offices which accepts such filings. Preparing the PCT application using the WIPO web service (ePCT-filing) or the software provided by WIPO (PCT-SAFE) helps you to prepare your applications by automatically validating the entered data and drawing your attention to incorrectly or inconsistently completed parts. Moreover, it helps you to manage your applications, for example, with monitoring time limits for relevant actions. You are also entitled to certain PCT fee reductions when filing electronically. More details about PCT electronic filing can be found at www.wipo.int/pct-safe/en/.

8) What are the costs associated with the filing and processing of an international application under the PCT? What are the costs for entering the national phase?

PCT applicants generally pay three types of fees when they file their international applications:

- (a) an international filing fee of 1,330 Swiss francs²,
- (b) a search fee which can vary from approximately 150 to 2,000 Swiss francs² depending on the ISA chosen, and
- (c) a small transmittal fee which varies depending on the receiving Office.

Because an international patent application is effective in all PCT Contracting States, you do not incur, at this stage in the procedure, the costs that would arise if you prepared and filed separate applications at national and regional Offices. Further information about PCT fees can be obtained from the receiving Offices, the Fee Tables (www.wipo.int/pct/en/fees.pdf), the *PCT Applicant's Guide* and the *PCT Newsletter* (see Question 29).

The fees you will need to pay as you enter the national phase represent the most significant pre-grant costs. They can include fees for translations of your application, national (or regional) Office filing fees and fees for acquiring the services of local patent agents or attorneys. In several Offices however, national filing fees are lower for international patent applications than they are for direct national applications in recognition of the work already done during the international phase. You should also remember that in the case of all granted patents, whether or not the PCT is used to obtain them, you will need to pay maintenance fees in each country in order to keep the patents alive.

9) Are there any fee reductions available under the PCT?

PCT fee reductions are available to all applicants who file electronically, based on the type of filing and the format of the application submitted (see Question 7).

In addition, to encourage the use of the PCT System by applicants from developing countries fee reductions of 90% for certain fees, including the international filing fee, are available to natural persons.³ This same 90% reduction applies to any person, whether a natural person

² Amount applicable on October 1, 2017.

³ See full list of States www.wipo.int/pct/en/fees/fee_reduction.pdf.

or not, who is a national of and resides in a State that is classed as a least developed country by the United Nations. If there are several applicants, each must satisfy those criteria.

Some ISAs also provide for a reduction of the international search fee if the applicant or applicants are nationals or residents from certain countries (see Annex D of the *PCT Applicant's Guide* www.wipo.int/pct/en/appguide/index.jsp).

Some national or regional Offices provide for fee reductions for natural persons, universities, not-for-profit research institutes and small and medium-sized enterprises (SMEs) for the fees you will need to pay as you enter the national phase (see respective National Chapters of the *PCT Applicant's Guide* www.wipo.int/pct/en/appguide/index.jsp).

10) How long does the PCT process take?

You have, in most cases, up to an additional 18 months from the time you file your international patent application (or usually 30 months from the filing date of the initial patent application of which you claim priority – see Question 11) before you have to begin the national phase procedures with individual patent Offices and to fulfill the national requirements (see Question 26).

This additional time can be useful for evaluating the chances of obtaining patents and exploiting your invention commercially in the countries in which you plan to pursue patent protection, and for assessing both the technical value of your invention and the continued need for protection in those countries.

It is important to note, however, that you do not have to wait for the expiration of 30 months from the earliest filing date of your patent application (“priority date”) before you enter the national phase – you can always request an early entry into the national phase.

Since, in the national phase, each patent Office is responsible for examining your application in accordance with national or regional patent laws, regulations and practices, the time required for the examination and grant of a patent varies across patent Offices.

11) What does it mean to “claim priority” of an earlier patent application?

Generally, patent applicants who wish to protect their invention in more than one country usually first file a national or regional patent application with their national or regional patent Office, and within 12 months from the filing date of that first application (a time limit set in the Paris Convention, see Question 2), they file their international application under the PCT.

The effect of claiming the priority of an earlier patent application is that a patent shall not be invalidated by reasons of any acts accomplished in the interval, such as another filing, the publication or sale of the invention.

12) In what languages can an international patent application be filed?

You can file an international patent application in any language which the receiving Office accepts. If you file your application in a language which is not accepted by the ISA that is to carry out the international search, you will be required to furnish a translation of the application for the purposes of international search. Receiving Offices are, however, obliged to accept filings in at least one language which is both a language accepted by the competent ISA that is to carry out the international search (see Question 13) and a “publication language”, that is, one of the languages in which international patent applications are published (Arabic, Chinese, English, French, German, Japanese, Korean, Portuguese, Russian and Spanish). You therefore always have the option of filing your international patent application in at least one language from which no translation is required for either PCT international search or publication purposes.

INTERNATIONAL SEARCH

13) Which Office will carry out the international search of my PCT application?

The following have been appointed by the PCT Contracting States as International Searching Authorities (ISAs): the national Offices of Australia, Austria, Brazil, Canada, China, Chile, Egypt, Finland, India, Israel, Japan, the Philippines⁴, the Republic of Korea, the Russian Federation, Singapore, Spain, Sweden, Turkey, Ukraine and the United States of America, and the following regional Offices, the European Patent Office, the Nordic Patent Institute and the Visegrad Patent Institute. The availability of a particular ISA to the nationals or residents of a country is determined by the receiving Office where the international application was filed. Some receiving Offices provide a choice of more than one competent ISA. If your receiving Office is one of those, you can choose any one of them, taking into account differing requirements relating to language, fees, etc.

14) What is a PCT international search?

A PCT international search is a high quality search of the relevant patent documents and other technical literature in those languages in which most patent applications are filed (Chinese, English, German and Japanese, and in certain cases, French, Korean, Russian and Spanish). The high quality of the search is assured by the standards prescribed in the PCT for the documentation to be consulted, and by the qualified staff and uniform search methods of the ISAs, which are all experienced patent Offices. The results are published in an international search report and a written opinion of the ISA on the potential patentability of your invention (see Questions 15 and 18).

15) What is an international search report?

The international search report consists mainly of a listing of references to published patent documents and technical journal articles which might affect the patentability of the invention disclosed in the international application. The report contains indications for each of the documents listed as to their possible relevance to the critical patentability questions of novelty and inventive step (non-obviousness). Together with the search report, the ISA prepares a written opinion on patentability, which will give you a detailed analysis of the potential patentability of your invention (see Question 18). The international search report and the written opinion are sent to you by the ISA.

16) What is the value of the international search report?

The report enables you to evaluate your chances of obtaining patents in PCT Contracting States. An international search report which is favorable, that is, in which the documents (prior art) cited would appear not to prevent the grant of a patent, assists you in the further processing of your application in those countries in which you wish to obtain protection. If a search report is unfavorable (for example, if it lists documents which challenge the novelty and/or inventive step of your invention), you have the opportunity to amend the claims in your international patent application (to better distinguish your invention from those documents), and have them published, or to withdraw the application before it is published.

⁴ This Office has been appointed, but has not yet confirmed when it will commence operations as an ISA.

17) Will an international search be carried out for all international applications?

As a rule, an international search is carried out for all international applications. There are instances, however, where the ISA will not be able to carry out a search. For example, where the international application relates to subject matter which the ISA is not required to search or if the description, claims or drawings are not sufficiently clear for it to carry out a meaningful search. In such cases, the ISA will issue a declaration that no international search report will be issued.

There are also circumstances where the ISA will issue a partial search report. This can occur when, in the view of the ISA, the international application contains multiple inventions but the applicant has not paid additional search fees to cover the work required to search those additional invention(s).

18) What is the written opinion of the International Searching Authority?

For every international application, the ISA will establish, at the same time that it establishes the international search report, a preliminary and non-binding opinion on whether the invention appears to meet the patentability criteria in light of the search report results. The written opinion, which is sent to you together with the international search report, helps you understand and interpret the results of the search report with specific reference to the text of your international application, being of special help to you in evaluating your chances of obtaining a patent. The written opinion is made available to the public at the same time as the application.

SUPPLEMENTARY INTERNATIONAL SEARCH

19) What is the PCT supplementary international search?

Supplementary international search permits the applicant to request, in addition to the international search (the “main international search”), one or more supplementary international searches each to be carried out by an ISA other than the ISA which carried out the main international search. The additional search has the potential of reducing the risk of new patent documents and other technical literature being discovered in the national phase since, by requesting supplementary search the applicant can enlarge the linguistic and/or technical scope of the documentation searched.

20) What is the supplementary international search report?

The supplementary international search report is generally similar in content and appearance to the main international search report; it contains a listing of references to patent documents and other technical literature which may affect the patentability of the invention claimed in the international application. However, it does not repeat documents which have already been cited in the international search report, unless this is necessary because of new relevance when read in conjunction with other documents discovered during the supplementary international search. On occasion, the supplementary international search report may contain more detailed explanations than those in the main international search report. This is due to the fact that, unlike the main international search, no written opinion is established with the supplementary international search report, and these additional details are helpful for a full understanding of the references listed.

INTERNATIONAL PUBLICATION

21) What does international publication under the PCT consist of?

WIPO publishes the international application shortly after the expiration of 18 months from the priority date (if it has not been withdrawn earlier), together with the international search report. PCT international applications are published online on PATENTSCOPE (www.wipo.int/patentscope/search/en/structuredSearch.jsf), a powerful, fully searchable database with flexible, multilingual interfaces and translation tools to assist users and the public in understanding the content of published applications.

22) Can third parties access documents contained in the file of the international application? If so, when?

Until international publication (18 months after the priority date), no third party is allowed access to your international application unless you as applicant request or authorize it. If you wish to withdraw your application (and you do so before international publication), international publication does not take place and, as a consequence, no access by third parties is permitted. However, when international publication occurs, certain documents in the international application file are made available on PATENTSCOPE together with the published international application, for example, the written opinion of the ISA and any informal comments on the written opinion.

INTERNATIONAL PRELIMINARY EXAMINATION

23) What is international preliminary examination?

International preliminary examination is a second evaluation of the potential patentability of the invention, using the same standards on which the written opinion of the ISA was based (see Question 18). If you wish to make amendments to your international application in order to overcome documents identified in the international search report and conclusions made in the written opinion of the ISA, international preliminary examination provides the only possibility to actively participate in the examination process and potentially influence the findings of the examiner before entering the national phase – you can submit amendments and arguments and are entitled to an interview with the examiner. At the end of the procedure, an international preliminary report on patentability (IPRP Chapter II) will be issued.

The International Preliminary Examining Authorities (IPEAs) which carry out the international preliminary examination are the ISAs mentioned above (see Question 13). For a given PCT application, there may be one or more competent IPEAs; your receiving Office can supply details or you may consult the *PCT Applicant's Guide* and the *PCT Newsletter*.

24) What is the value of the international preliminary report on patentability (Chapter II)?

The IPRP (Chapter II) which is provided to you, to WIPO and to the national (or regional) patent Offices, consists of an opinion on the compliance with the international patentability criteria of each of the claims which have been searched. It provides you with an even stronger basis on which to evaluate your chances of obtaining patents, in most cases on an amended application, and, if the report is favorable, a stronger basis on which to continue with your application before the national and regional patent Offices. The decision on the granting of a patent remains the responsibility of each of the national or regional Offices in which you enter the national phase; the IPRP (Chapter II) should be considered by the Offices but is not binding on them.

NATIONAL PHASE

25) How do I enter the national phase?

It is only after you have decided whether, and in respect of which States, you wish to proceed further with your international application that you must fulfill the requirements for entry into the national phase. These requirements include paying national fees and, in some cases, filing translations of the application. These steps must be taken, in relation to the majority of PCT Contracting States' patent Offices, before the end of the 30th month from the priority date. There may also be other requirements in connection with the entry into the national phase – for example, the appointment of local agents. More general information on national phase entry can be found in the *PCT Applicant's Guide, National Phase*, and specific information concerning fees and national requirements can be found in the national chapters for each PCT Contracting State in the same *Guide*.

26) What happens to my application in the national phase?

Once you have entered the national phase, the national or regional patent Offices concerned begin the process of determining whether they will grant you a patent. Any examination which these Offices may undertake should be made easier by the PCT international search report and the written opinion and even more by an international preliminary examination report.

FURTHER INFORMATION

27) What is the role of WIPO in the PCT?

WIPO administers the PCT. It also organizes the PCT Assembly, the PCT Working Group and the Meeting of International Authorities. Further, for each PCT application filed, WIPO is responsible for:

- receiving and storing all application documents;
- performing a formality examination;
- publishing the international application on WIPO's online database PATENTSCOPE;
- publishing data about the PCT application as prescribed in the Treaty and Regulations;
- translating various portions of the PCT application and certain associated documents into English and/or French, where necessary;
- communicating documents to Offices and third parties; and
- providing legal advice on request to Offices and users.

WIPO also:

- provides overall coordination of the PCT System;
- provides assistance to existing, new and potential Contracting States and their Offices;
- provides advice on implementing the PCT in the national legislation and on setting up internal procedures in the Contracting States' patent Offices;
- publishes the *PCT Applicant's Guide* and the *PCT Newsletter*;
- creates and disseminates PCT information via the PCT website, webinars, and through telephone and e-mail assistance; and
- organizes and gives PCT seminars and training courses.

28) What are the advantages of the Patent Cooperation Treaty?

The PCT System has many advantages for you as an applicant, for the patent Offices and for the general public:

- (a) you have up to 18 months more than if you had not used the PCT to reflect on the desirability of seeking protection in foreign countries, to appoint local patent agents in each foreign country, to prepare the necessary translations and to pay the national fees;
- (b) if your international application is in the form prescribed by the PCT, it cannot be rejected on formal grounds by any PCT Contracting State patent Office during the national phase of the processing of the application;
- (c) the international search report and written opinion contain important information about the potential patentability of your invention, providing a strong basis for you to make business decisions about how to proceed;
- (d) you have the possibility during the optional international preliminary examination to amend the international application, enter into dialogue with the examiner to fully argue your case and put the application in order before processing by the various national patent Offices;
- (e) the search and examination work of patent Offices in the national phase can be considerably reduced thanks to the international search report, the written opinion and, where applicable, the international preliminary report on patentability that accompany the international application;
- (f) you may be able to fast-track examination procedures in the national phase in Contracting States that have PCT-Patent Prosecution Highway (PCT-PPH) agreements or similar arrangements (see www.wipo.int/pct/en/filing/pct_pph.html);
- (g) since each international application is published together with an international search report, third parties are in a better position to evaluate the potential patentability of the claimed invention;
- (h) for you as an applicant, international publication online puts the world on notice of your invention. You may also highlight your interest in concluding licensing agreements on PATENTSCOPE, which can be an effective means of advertising and looking for potential licensees;
- (i) you also achieve other savings in document preparation, communication and translations because the work done during the international processing is generally not repeated before each Office (for example, you submit only one copy of the priority document instead of having to submit several copies); and
- (j) if your invention appears to be not patentable at the end of the international phase, you may abandon the PCT application and you will have saved the costs you would otherwise have incurred by directly seeking protection in foreign countries, appointing local patent agents in each foreign country, preparing the necessary translations and paying the national fees.

Ultimately, the PCT:

- brings the world within reach;
- streamlines the process of fulfilling diverse formality requirements;
- postpones the major costs associated with seeking multinational patent protection;
- provides a strong basis for patenting decisions; and
- is used by the world's major corporations, research institutions and universities when they seek multinational patent protection.⁵

⁵

29) Where can I find out more about the PCT?

On the PCT website (www.wipo.int/pct/en/) and in the various PCT publications you will find information in various language versions, including:

- *PCT Applicant's Guide* (www.wipo.int/pct/en/appguide/index.jsp);
- *PCT Newsletter* (monthly) (www.wipo.int/pct/en/newslett/index.html); and
- *PCT Highlights* (www.wipo.int/pct/en/highlights/).

If you are considering filing an international patent application under the PCT, you are advised to consult a qualified patent attorney or agent in your country, and/or your national or regional patent Office.
