# SECTION F — MECHANICAL ENGINEERING; LIGHTING; HEATING; WEAPONS; BLASTING

### F22 STEAM GENERATION

#### Note(s)

In this class, the following term is used with the meaning indicated:

- "steam" covers also other condensable vapours, e.g. mercury, diphenyl, diphenyl oxide.
- **METHODS OF STEAM GENERATION; STEAM BOILERS** (steam engine plants where engine aspects predominate F01K; removal of combustion products or residues, e.g. cleaning of the combustion contaminated surfaces of tubes of boilers, F23J 3/00; domestic central-heating systems using steam F24D; heat exchange or heat transfer in general F28; generation of vapour in the cores of nuclear reactors G21)

## Note(s)

This subclass <u>covers</u> only methods of, or apparatus for, the generation of steam under pressure for heating or power purposes.

#### Subclass index

METHODS FOR STEAM GENERATIONSTEAM BOILERS	1/00, 3/00
General characteristics	
having drum; having furnace tube; having fire tube; having combined fire tube and water tube; having fire-box	5/00, 7/00, 9/00, 11/00, 13/00
having water tubes	
auxiliary tubes	11/00
horizontal; horizontally-inclined; combined horizontally-inclined and vertical; vertical or steeply-inclined	15/00, 17/00, 19/00, 21/00
formed of sets of spaced double-walled water tubes or of return tubes; water tubes with	
internally-arranged flue tubes	23/00, 25/00
Special characteristics	27/00, 29/00
Modifications or arrangements; details of general application	31/00, 37/00
PLANTS; CONTROL SYSTEMS	33/00, 35/00

- 1/00 Methods of steam generation characterised by form of heating method (use of solar heat F24J 2/00; jackets or other cooling means in which steam is generated and which serve for cooling other apparatus, see the subclasses for such apparatus)
- 1/02 by exploitation of the heat content of hot heat carriers
- the heat carrier being hot slag, hot residues, or heated blocks, e.g. iron blocks
- the heat carrier being molten; Use of molten metal,
   e.g. zinc, as heat transfer medium
- 1/08 • the heat carrier being steam
- 1/10 • released from heat accumulators
- 1/12 • produced by an indirect cyclic process
- 1/14 • coming in direct contact with water in bulk or in sprays
- 1/16 the heat carrier being hot liquid or hot vapour, e.g. waste liquid, waste vapour
- the heat carrier being a hot gas, e.g. waste gas such as exhaust gas of internal-combustion engines (use of waste heat of combustion engines, in general, F02)

- using heat evolved in a solution absorbing steam;
   Soda steam boilers
- using combustion under pressure substantially exceeding atmospheric pressure
- Pressure-fired steam boilers, e.g. using turbo air compressors actuated by hot gases from boiler furnace
- 1/26 Steam boilers of submerged-flame type, i.e. the flame being surrounded by, or impinging on, the water to be vaporised
- 1/28 in boilers heated electrically
- 1/30 • Electrode boilers
- 3/00 Other methods of steam generation; Steam boilers not provided for in other groups of this subclass
- 3/02 involving the use of working media other than water
- by drop in pressure of high-pressure hot water within pressure-reducing chambers, e.g. in accumulators (steam accumulators <u>per se</u> F01K 1/00)
- 3/06 by transformation of mechanical, e.g. kinetic, energy into heat energy

edges

37/10	• • Water tubes; Accessories therefor (working of metal tubes B21D; pipes in general F16L; repairing leaks in water tubes F16L 55/16, F28F 11/00; cleaning water tubes of polymers F23J,	37/46 • • • responsive to low or high water level, e.g. for checking, suppressing, extinguishing combustion in boilers (fire-fighting, fire extinction in general A62)
37/12	<ul> <li>F28G; baffles, screens, or deflectors formed of water tubes F23M 9/10)</li> <li>• Forms of water tubes, e.g. of varying cross-</li> </ul>	37/47 • • • responsive to abnormal temperature, e.g. actuated by fusible plugs (such alarms or devices per se G08B)
3//12	section	37/48 • • Devices or arrangements for removing water,
37/14	• • • Supply mains, e.g. rising mains, down-comers, in connection with water tubes	minerals, or sludge from boilers (cleaning water tubes, furnace tubes, or the like of boilers F23J,
37/16	• • • Return bends	F28G)
37/18	<ul> <li>Inserts, e.g. for receiving deposits from water</li> </ul>	Note(s)
37/20	<ul> <li>• Supporting arrangements, e.g. for securing water-tube sets (construction of tube walls of furnaces including boiler furnaces F23M 5/08)</li> </ul>	Group F22B 37/48 <u>covers</u> only systems used while the boiler is in operation, or which remain in position while
37/22	Drums; Headers; Accessories therefor (making)	the boiler is in operation, or are specifically adapted to boilers without any other utility.
	boilers from sheet metal B21D 51/24; pressure	37/50 • • • for draining or expelling water
	vessels in general F16J 12/00; covers or similar closure members for pressure vessels in general	37/52 • • • Washing-out devices
	F16J 13/00)	37/54 • • De-sludging or blow-down devices
37/24	Supporting, suspending, or setting arrangements, e.g. heat shielding (frames, engine beds F16M)	37/56 • • Boiler-cleaning control devices, e.g. for ascertaining proper duration of boiler blow-down
37/26	<ul> <li>Steam-separating arrangements (vapour-liquid separators, e.g. for drying steam, B01D, B04)</li> </ul>	37/58 • • Removing tubes from headers or drums; Extracting tools
37/28	<ul> <li>• involving reversal of direction of flow</li> </ul>	37/60 • specially adapted for steam boilers of instantaneous
37/30	<ul> <li>using impingement against baffle separators</li> </ul>	or flash type
37/32	<ul> <li>using centrifugal force</li> </ul>	• specially adapted for steam boilers of forced-flow
37/34	<ul> <li>Adaptations of boilers for promoting water</li> </ul>	type
27/26	circulation (auxiliary devices for promoting water circulation F22D 7/00)	<ul> <li>Mounting of, or supporting arrangements for, tube units (construction of tube walls of furnaces, e.g. boiler furnaces F23M 5/08)</li> </ul>
37/36	Arrangements for sheathing or casing boilers  Output  Determining or indicating or casing sounditions in	37/66 • • involving vertically-disposed water tubes
37/38	<ul> <li>Determining or indicating operating conditions in steam boilers, e.g. monitoring direction or rate of</li> </ul>	37/68 • • • involving horizontally-disposed water tubes
	water flow through water tubes (measuring or indicating instruments in general G01)	37/70 • • Arrangements for distributing water into water tubes
37/40	<ul> <li>Arrangements of partition walls in flues of steam</li> </ul>	37/72 • • • involving injection devices
	boilers, e.g. built-up from baffles (in flues or chimneys F23J 13/00)	37/74 • • • Throttling arrangements for tubes or sets of tubes
37/42	Applications, arrangements, or dispositions of alarm or automatic safety devices (for feed-water heaters F22D 1/14; alarms responsive to undesired	• Adaptations or mounting of devices for observing existence or direction of fluid flow (devices <u>per se</u> G01P)
27/44	or abnormal conditions G08B)	• Adaptations or mounting of level indicators (level
37/44	• • • of safety valves (safety valves <u>per se</u> F16K)	indicators <u>per se</u> G01F)

PREHEATING, OR ACCUMULATING PREHEATED, FEED-WATER; FEED-WATER SUPPLY; CONTROLLING WATER LEVEL; AUXILIARY DEVICES FOR PROMOTING WATER CIRCULATION WITHIN BOILERS (chemical treatment of water, e.g. purification, C02F; enclosed heat-exchange apparatus in general F28D; controlling in general G05)

1/00	Feed-water heaters, e.g. preheaters	1/16 • with water tubes arranged otherwise than in the boiler
1/02	<ul> <li>with water tubes arranged in the boiler furnace, fire</li> </ul>	furnace, fire tubes, or flue ways
	tubes, or flue ways (heat-exchange tubes in general	1/18 • • and heated indirectly
	F28F)	1/20 • • and directly connected to boilers
1/04	• the tubes having plain outer surfaces, e.g. in	1/22 • • and provided for rotary movement
	vertical arrangement	1/24 • with fire tubes or flue ways traversing feed-water
1/06	• • in horizontal arrangement	vessels
1/08	<ul> <li>the tubes having fins, ribs, gills, corrugations, or the like on their outer surfaces, e.g. in vertical arrangement</li> </ul>	<ul> <li>with means, other than tubes, to separate water and heating medium, e.g. bulk heaters without internal flues or tubes, jacketted smoke-boxes or flues</li> </ul>
1/10	• • • in horizontal arrangement (hollow fire-bars, grates, or the like used as water tubes	1/28 • for direct heat transfer, e.g. by mixing water and steam
	F23H 3/02)	1/30 • • with stages, steps, baffles, dishes, circular troughs,
1/12	<ul> <li>Control devices, e.g. for regulating steam temperature</li> </ul>	or other means to cause interrupted or cascading fall of water
1/14	<ul> <li>Safety or venting devices (safety devices for boilers in general F22B 37/42)</li> </ul>	1/32 • arranged to be heated by steam, e.g. bled from turbines

1/34	<ul> <li>and returning condensate to boiler with main feed supply</li> </ul>	5/10	and with pistons or membranes unitary with the feed inlet valves
1/36	Water and air preheating systems	5/12	and with dipping tubes
1/38	Constructional features of water and air preheating systems	5/14	<ul> <li>responsive to thermal expansion and contraction, e.g. of solid elements</li> </ul>
1/40	<ul> <li>Combinations of exhaust-steam and smoke-gas</li> </ul>	5/16	<ul> <li>of fluids</li> </ul>
	preheaters (for locomotives F22D 1/42)	5/18	<ul> <li>for varying the speed or delivery pressure of feed</li> </ul>
1/42	<ul> <li>specially adapted for locomotives</li> </ul>		pumps
1/44	<ul> <li>Smoke-gas preheaters</li> </ul>	5/20	<ul> <li>without floats</li> </ul>
1/46	<ul> <li>Exhaust-steam preheaters</li> </ul>	5/22	• • with floats
1/48	• • Details	5/24	<ul> <li>with electric switches</li> </ul>
1/50	<ul> <li>incorporating thermal de-aeration of feed-water (de- aeration produced in the course of direct heat transfer</li> </ul>	5/26	<ul> <li>Automatic feed-control systems (automatic safety devices F22B 37/42; controlling in general G05)</li> </ul>
	F22D 1/28; thermal de-aeration of water <u>per se</u> B01D 19/00, C02F 1/20; valves for venting	5/28	<ul> <li>responsive to amount of steam withdrawn; responsive to steam pressure</li> </ul>
2 /00	F16K 24/04) [3]	5/30	<ul> <li>responsive to both water level and amount of steam withdrawn or steam pressure</li> </ul>
3/00	Accumulators for preheated water	5/32	<ul> <li>influencing the speed or delivery pressure of the</li> </ul>
3/02	arranged within combustion chambers		feed pumps
3/04	combined with steam accumulators	5/34	<ul> <li>Applications of valves (valves <u>per se</u> F16K)</li> </ul>
3/06	directly connected to boilers	5/36	• • for feeding a number of steam boilers designed for
3/08	<ul> <li>specially adapted for locomotives (locomotive boilers F22B 13/06)</li> </ul>		different ranges of temperature and pressure
3/10	<ul> <li>Control devices (controlling water feed to boilers, or water level F22D 5/00)</li> </ul>	7/00	Auxiliary devices for promoting water circulation (adaptation of boilers for promoting water circulation F22B 37/34)
5/00	Controlling water feed or water level; Automatic	7/02	<ul> <li>Saddles or like directing plates fitted to furnace tubes</li> </ul>
	water feeding or water-level regulators (steam traps	7/04	Injectors for water or steam
	F16T; measuring or indicating instruments G01; for	7/06	Rotary devices, e.g. propellers
	indicating water level G01F; level control in general	7/08	<ul> <li>Arrangements of pumps, e.g. outside the boilers</li> </ul>
E /02	G05D 9/00)	7/10	• • • within the boilers
5/02	<ul> <li>with an intermediate compartment from which the water is fed by gravity after mechanically moving the</li> </ul>	7/12	<ul> <li>Control devices</li> </ul>
	compartment, the movement being controlled according to water level	7/14	specially adapted for locomotive boilers
5/04	with pivoting buckets	11/00	Feed-water supply not provided for in other main
5/04	<ul> <li>with prvotting buckets</li> <li>with receptacles external to, but in free</li> </ul>		groups
5700	communication with, the boilers and adapted to move up and down in accordance with change in water	11/02	<ul> <li>Arrangements of feed-water pumps (F22D 11/06 takes precedence; pumps <u>per se</u> F04)</li> </ul>
	level	11/04	<ul> <li>with means to eliminate steam formation</li> </ul>
5/08	<ul> <li>with float-actuated valves</li> </ul>	11/06	<ul> <li>for returning condensate to boiler</li> </ul>

**F22G SUPERHEATING OF STEAM** (steam-separating arrangements in boilers F22B 37/26; removal of combustion products or residues, e.g. cleaning of the combustion contaminated surfaces of tubes of boilers, F23J 3/00)

1/00	Steam superheating characterised by heating method (exothermal chemical reactions not involving a supply of free oxygen gas, apparatus or devices for using the heat therefrom F24J)	3/00	Steam superheaters characterised by constructional features; Details or component parts thereof (general aspects of enclosed heat-exchangers F28D)
1/02	<ul> <li>with heat supply by hot flue gases from the furnace of the steam boiler</li> </ul>	5/00	<b>Controlling superheat temperature</b> (control systems for steam boilers F22B; regulating or controlling in general G05)
1/04	<ul> <li>by diverting flow or hot flue gases to separate superheaters operating in reheating cycle, e.g. for reheating steam between a high-pressure turbine</li> </ul>	5/02	<ul> <li>Applications of combustion-control devices, e.g. tangential-firing burners, tilting burners</li> </ul>
1/06	stage and an intermediate turbine stage • with heat supply predominantly by radiation	5/04	<ul> <li>by regulating flue gas flow, e.g. by proportioning or diverting</li> </ul>
1/08 1/10 1/12	<ul> <li>• from heated brickwork or the like</li> <li>• with provision for superheating by throttling</li> <li>• by mixing steam with furnace gases or other</li> </ul>	5/06 5/08	<ul> <li>by recirculating flue gases</li> <li>preventing furnace gas backflow through recirculating fan</li> </ul>
1/14 1/16	<ul><li>combustion products</li><li>using heat generated by chemical reactions</li><li>by using a separate heat source independent from</li></ul>	5/10 5/12	<ul> <li>by displacing superheater sections</li> <li>by attemperating the superheated steam, e.g. by injected water sprays (spray-mixers B01F 5/18)</li> </ul>
	heat supply of the steam boiler, e.g. by electricity, by auxiliary combustion of fuel oil	5/14 5/16	<ul><li> by live steam</li><li> by indirectly cooling or heating the superheated steam in auxiliary enclosed heat-exchanger</li></ul>

5/18 • by by-passing steam around superheater sections

5/20 • by combined controlling procedures

## 7/00 Steam superheaters characterised by location, arrangement, or disposition

7/02 • in fire tubes

7/04 • in jackets around fire tubes

7/06 • in furnace tubes

7/08 • in fire-boxes

7/10 • in smoke-boxes

7/12 • in flues

7/14  $\phantom{0}$   $\phantom{0}$  in water-tube boilers, e.g. between banks of water tubes
