#### SECTION H — ELECTRICITY

#### H04 ELECTRIC COMMUNICATION TECHNIQUE

#### Note(s)

This class <u>covers</u> electrical communication systems with propagation paths employing beams of corpuscular radiation, acoustic waves or electromagnetic waves, e.g. radio or optical communication.

#### H04B TRANSMISSION [4]

#### Note(s)

This subclass <u>covers</u> the transmission of information-carrying signals, the transmission being independent of the nature of the information, and includes monitoring and testing arrangements and the suppression and limitation of noise and interference.

#### Subclass index

DETAILS	1/00
SYSTEMS CHARACTERISED BY THE MEDIUM USED FOR TRANSMISSION	
Using conductors	
Using free-space propagation	5/00-11/00
Others	
SYSTEMS NOT CHARACTERISED BY THE MEDIUM USED FOR TRANSMISSION	14/00
SUPPRESSION OR LIMITATION OF NOISE OR INTERFERENCE	15/00
MONITORING, TESTING	

1/00 Details of transmission systems, not covered by a single one of groups H04B 3/00-H04B 13/00; Details of transmission systems not characterised by the	1/28 • • • • the receiver comprising at least one semiconductor device having three or more electrodes
medium used for transmission [4]	1/30 • • • for homodyne or synchrodyne receivers
1/02 • Transmitters	(demodulator circuits H03D 1/22)
1/03 • • Constructional details, e.g. casings, housings [2]	1/38 • Transceivers, i.e. devices in which transmitter and
1/034 • • • Portable transmitters [2]	receiver form a structural unit and in which at least
1/036 • • • Cooling arrangements [2]	one part is used for functions of transmitting and receiving
1/04 • • Circuits	1/40 • • Circuits
1/06 • Receivers	
1/08 • • Constructional details, e.g. cabinet	1/44 • • Transmit/receive switching <b>[2]</b>
1/10 • • Means associated with receiver for limiting or	1/46 • • • by voice-frequency signals; by pilot signals
suppressing noise or interference	1/48 • • • in circuit for connecting transmitter and
1/12 • • • Neutralising, balancing, or compensation	receiver to a common transmission path, e.g. by energy of transmitter
arrangements	
1/14 • • • Automatic detuning arrangements	1/50 • • • using different frequencies for the two directions of communication
1/16 • • Circuits	1/52 • • • • Hybrid arrangements, i.e. for transition from
<ul> <li>1/18 • • • Input circuits, e.g. for coupling to an aerial or a transmission line (coupling networks between aerials or lines and receivers independent of the nature of the receiver H03H)</li> </ul>	1732 <b>1 i v v v v v v v v v v</b>
1/20 • • • for coupling gramophone pick-up, recorder	1/54 • • • using the same frequency for both directions of
output, or microphone to receiver	communication (H04B 1/44 takes precedence)
1/22 • • • for receivers in which no local oscillation is	1/56 • • • • with provision for simultaneous communication in both directions
generated 1/24 • • • the receiver comprising at least one semiconductor device having three or more electrodes	<ul> <li>1/58 • • • Hybrid arrangements, i.e. for transition from single-path two-way transmission to single transmission on each of two paths, or vice versa</li> </ul>
1/26 • • • for superheterodyne receivers (multiple	1/59 • Responders; Transponders
frequency-changing H03D 7/16)	1/60 • Supervising unattended repeaters
	1,00 Supervising undurended repetiters

1/62	<ul> <li>for providing a predistortion of the signal in the transmitter and corresponding correction in the</li> </ul>	1/7183 • • • Synchronisation [2011.01] 1/719 • • • Interference-related aspects [2011.01]

10/30	output [2013.01]	13/02	• Transmission systems in which the medium consists
10/588	• • • in external modulation systems [2013.01]		of the earth or a large mass of water thereon, e.g.
10/60	• Receivers [2013.01]		earth telegraphy
10/61	Coherent receivers [2013.01]	14/00	Transmission systems not characterised by the
10/63	• • • Homodyne <b>[2013.01]</b>	14/00	medium used for transmission (details thereof
10/64	• • • Heterodyne <b>[2013.01]</b>		H04B 1/00) <b>[4]</b>
10/66	<ul> <li>Non-coherent receivers, e.g. using direct detection [2013.01]</li> </ul>	14/02	characterised by the use of pulse modulation (in radio transmission relays H04B 7/17) [4]
10/67	• • • Optical arrangements in the receiver [2013.01]	14/04	• • using pulse code modulation [4]
10/69	• • Electrical arrangements in the receiver [2013.01]	14/06	• • using differential modulation, e.g. delta modulation [4]
10/70	Photonic quantum communication [2013.01]	14/08	<ul> <li>characterised by the use of a sub-carrier [4]</li> </ul>
10/80	• Optical aspects relating to the use of optical transmission for specific applications, not provided for in groups H04B 10/03-H04B 10/70, e.g. optical	15/00	<b>Suppression or limitation of noise or interference</b> (by means associated with receiver H04B 1/10)
	power feeding or optical transmission through water <b>[2013.01]</b>	15/02	• Reducing interference from electric apparatus by means located at or near the interfering apparatus
10/85	<ul> <li>Protection from unauthorised access, e.g. eavesdrop protection [2013.01]</li> </ul>	15/04	• the interference being caused by substantially sinusoidal oscillations, e.g. in a receiver or in a
10/90	Non-optical transmission systems, e.g. transmission		tape-recorder
	systems employing non-photonic corpuscular radiation [2013.01]	15/06	• • • by local oscillators of receivers
		17/00	Monitoring; Testing [2]
11/00	Transmission systems employing ultrasonic, sonic or infrasonic waves	17/02	of relay systems [2]

H04H BROADCAST COMMUNICATION (multiplex communication H04J; pictorial communication aspects of broadcast systems H04N)

#### Note(s)

In this subclass, the following terms or expressions are used with the meaning indicated: 1.

- "broadcast" is simultaneous distribution of identical signals to plural receiving stations. The term "broadcast" does not include distribution to receiving stations which is controlled by requests or responses from the receiving stations;
  - "broadcast information" covers all kinds of information distributed by broadcast systems;
  - "broadcast-related information" is information required by services provided via broadcast systems, other than broadcast information;
  - "broadcast time" is a time when particular broadcast information exists and is available;
  - "broadcast channel" is a channel via which broadcast information is distributed, e.g. carrier waves, time slots, cables or wireless broadcast service areas;
  - "broadcast space" is either a set of broadcast channels in which particular broadcast information exists and is available or a geographical area determined by the set of broadcast channels;
  - "broadcast space-time" is space-time determined by broadcast space and broadcast time in which particular broadcast information exists and is available:
  - "broadcast system" is a system which consists of transmitter, transponder and receiver for broadcast;
  - "broadcast-related system" is a system which is directly affected by generation, broadcast, reception or use of broadcast information:
  - "broadcast service" is a service directly provided by a broadcast system, i.e. distribution service of broadcast information;
  - "broadcast-related service" is a service provided by broadcast-related systems;
  - "A with a direct linkage to B" means that A directly affects B or that A is directly affected by B.
- In this subclass, multi-aspect classification is applied, so that subject matter characterised by aspects covered by more than one of its 2. groups, which is considered to represent information of interest for search, may also be classified in each of those groups.

20/00	Arrangements for broadcast or for distribution combined with broadcast [2008.01]	20/12 • Arrangements for monitoring, testing or troubleshooting [2008.01]
20/02	<ul> <li>Arrangements for relaying broadcast</li> </ul>	20/14 • • for monitoring programmes [2008.01]
	information [2008.01]	• Arrangements for broadcast or distribution of
20/04	• • from field pickup units [FPU] [2008.01]	identical information repeatedly [2008.01]
20/06	• • among broadcast stations [2008.01]	20/18 • Arrangements for synchronising broadcast or
20/08	• • among terminal devices [2008.01]	distribution via plural systems [2008.01]
20/10	Arrangements for replacing or switching information	20/20 • Arrangements for broadcast or distribution of
	during the broadcast or during the	identical information via plural systems [2008.01]
	distribution <b>[2008.01]</b>	

20/22	•	<ul> <li>Arrangements for broadcast of identical information via plural broadcast systems [2008.01]</li> </ul>
20/24	•	<ul> <li>Arrangements for distribution of identical information via broadcast system and non- broadcast system [2008.01]</li> </ul>
20/26	•	Arrangements for switching distribution systems [2008.01]
20/28	•	Arrangements for simultaneous broadcast of plural pieces of information <b>[2008.01]</b>
20/30	•	• by a single channel <b>[2008.01]</b>
20/31	•	<ul> <li>using in-band signals, e.g. subsonic or cue signal [2008.01]</li> </ul>

**H04J MULTIPLEX COMMUNICATION** (peculiar to transmission of digital information H04L 5/00; systems for the simultaneous or sequential transmission of more than one television signal H04N 7/08; in exchanges H04Q 11/00)

#### Note(s)

This subclass covers:

circuits or apparatus for combining or dividing signals for the purpose of transmitting them simultaneously or sequentially over the same transmission path;
monitoring arrangements therefor.

1/00	Frequency-division multiplex systems (H04J 14/02 takes precedence) [5]					
1/02	Details					
1/04	Frequency-transposition arrangements					
1/05	• • • using digital techniques <b>[3]</b>					
1/06	• • Arrangements for supplying the carrier waves					
1/08	Arrangements for combining channels					
1/10	Intermediate station arrangements, e.g. for branching, for tapping-off					
1/12	Arrangements for reducing cross-talk between channels					
1/14	• • Arrangements providing for calling or supervisory signals					
1/16	Monitoring arrangements					
1/18	• in which all the carriers are amplitude-modulated (H04J 1/02 takes precedence) <b>[3]</b>					
1/20	<ul> <li>in which at least one carrier is angle-modulated (H04J 1/02 takes precedence) [3]</li> </ul>					
2 / 2 2						
3/00		<b>Time-division multiplex systems</b> (H04J 14/08 takes				
2/02	<ul><li>precedence) [4, 5]</li><li>Details</li></ul>					
3/02						
3/04	Distributors combined with modulators or demodulators					
3/06	<ul> <li>Synchronising arrangements</li> </ul>					
3/07	• • • using pulse stuffing for systems with different or fluctuating information rates [3]					
3/08	• Intermediate station arrangements, e.g. for branching, for tapping-off					
3/10	Arrangements for reducing cross-talk between channels					
3/12	• • Arrangements providing for calling or supervisory signals					
3/14	Monitoring arrangements					
3/16	• in which the time allocation to individual channels within a transmission cycle is variable, e.g. to accommodate varying complexity of signals, to vary number of channels transmitted (H04J 3/17,					
3/17	<ul><li>H04J 3/24 take precedence) [4]</li><li>in which the transmission channel allotted to a first</li></ul>					
3/1/	• in which the transmission channel allotted to a first user may be taken away and re-allotted to a second user if the first user becomes inactive, e.g. TASI [4]					
3/18	• using frequency compression and subsequent expansion of the individual signals					
3/20	using resonant transfer [2]					
3/22	• in which the sources have different rates or codes <b>[4]</b>					

- in which the allocation is indicated by an address (H04J 3/17 takes precedence) [4]
- 3/26 in which the information and the address are simultaneously transmitted [4]
- 4/00 Combined time-division and frequency-division multiplex systems (H04J 13/00 takes precedence) [2]
- 7/00 Multiplex systems in which the amplitudes or durations of the signals in individual channels are characteristic of those channels
- 7/02 in which the polarity of the amplitude is characteristic
- 9/00 Multiplex systems in which each channel is represented by a different type of modulation of the carrier
- 11/00 Orthogonal multiplex systems (H04J 13/00 takes precedence) [2]
- 13/00 Code division multiplex systems (for frequency hopping H04B 1/713) [2, 2011.01]

#### Note(s) [2011.01]

	When classifying in this group, any aspect of spread spectrum techniques not specific to frequency hopping, and which is considered to represent information of interest for search, may also be classified in group H04B 1/69.		
13/10	Code generation [2011.01]		
13/12	• • Generation of orthogonal codes [2011.01]		
13/14	• • Generation of codes with a zero correlation zone [2011.01]		
13/16	Code allocation [2011.01]		
13/18	• • Allocation of orthogonal codes [2011.01]		
13/20	• • having an orthogonal variable spreading factor [OVSF] [2011.01]		
13/22	Allocation of codes with a zero correlation zone [2011.01]		
14/00	Optical multiplex systems [5]		
14/02	• Wavelength-division multiplex systems [5]		
14/04	Mode multiplex systems [5]		
14/06	Polarisation multiplex systems [5]		
14/08	• Time-division multiplex systems [5]		
99/00	Subject matter not provided for in other groups of this subclass [2009.01]		

#### H04K SECRET COMMUNICATION; JAMMING OF COMMUNICATION

#### <u>Note(s)</u>

In this subclass, the following expression is used with the meaning indicated:

#### H04K

- "secret communication" includes secret line and radiation transmission systems, i.e. those in which apparatus at the transmitting station modifies the signal in such a way that the information cannot be intelligibly received without corresponding modifying apparatus at the receiving station.
- 1/00 Secret communication (ciphering or deciphering apparatus <u>per se</u> G09C; systems with reduced bandwidth or suppressed carrier H04B 1/66; spread spectrum techniques H04B 1/69; by using a sub-carrier H04B 14/08; by multiplexing H04J; transmission systems for secret digital information H04L 9/00; secret or subscription television systems H04N 7/16, H04N 21/00)
- 1/02 by adding a second signal to make the desired signal unintelligible
- 1/04 by frequency scrambling, i.e. by transposing or inverting parts of the frequency band or by inverting the whole band
- 1/06 by transmitting the information or elements thereof at unnatural speeds or in jumbled order or backwards
- 1/08 by varying the polarisation of transmitted waves
- 1/10 by using two signals transmitted simultaneously or successively
- **3/00** Jamming of communication; Counter-measures (counter-measures used in radar or analogous systems G01S 7/00)
- H04L TRANSMISSION OF DIGITAL INFORMATION, e.g. TELEGRAPHIC COMMUNICATION (arrangements common to telegraphic and telephonic communication H04M) [4]

#### Note(s)

This subclass <u>covers</u> transmission of signals having been supplied in digital form and includes data transmission, telegraphic communication, or methods or arrangements for monitoring.

#### Subclass index

SYSTEMS CHARACTERISED BY:	
The code used: Morse; Baudot; details	
Otherwise: step by step; mosaic printers; other systems	19/00, 21/00, 23/00
BASEBAND SYSTEMS	25/00
MODULATED-CARRIER SYSTEMS	27/00
DATA SWITCHING NETWORKS	12/00
ARRANGEMENTS OF GENERAL APPLICATION	
Security: errors; secret	
Multiple communications; synchronising	5/00, 7/00
OTHER ARRANGEMENTS, APPARATUS OR SYSTEMS	

1/00	Arrangements for detecting or preventing errors in the information received	5/08
1/02	by diversity reception	
1/04	<ul> <li>using frequency diversity</li> </ul>	5/10
1/06	<ul> <li>using space diversity</li> </ul>	
1/08	• by repeating transmission, e.g. Verdan system	5/12
1/12		
1/14	• • in which the signals are sent back to the	5/14
	transmitter to be checked	
1/16	• • in which the return channel carries supervisory	5/16
	signals, e.g. repetition request signals	= /40
1/18	• • • Automatic repetition systems, e.g. van Duuren	5/18
	system	5/20
1/20	<ul> <li>using signal-quality detector [3]</li> </ul>	= (22
1/22	<ul> <li>using redundant apparatus to increase reliability [3]</li> </ul>	5/22
1/24	<ul> <li>Testing correct operation [3]</li> </ul>	5/24
		5/26
5/00	Arrangements affording multiple use of the transmission path	7/00
5/02	Channels characterised by the type of signal	
5/04	<ul> <li>the signals being represented by different</li> </ul>	7/02
	amplitudes or polarities, e.g. quadriplex	
5/06	<ul> <li>the signals being represented by different frequencies (combined with time-division multiplexing H04L 5/26)</li> </ul>	7/027

5/08	<ul> <li>each combination of signals in different channels being represented by a fixed frequency</li> </ul>
5/10	• • with dynamo-electric generation of carriers; with mechanical filters or demodulators
5/12	• • the signals being represented by different phase modulations of a single carrier
5/14	• Two-way operation using the same type of signal, i.e. duplex
5/16	<ul> <li>Half-duplex systems; Simplex/duplex switching; Transmission of break signals</li> </ul>
5/18	Automatic changing of the traffic direction
5/20	<ul> <li>using different combinations of lines, e.g. phantom working</li> </ul>
5/22	<ul> <li>using time-division multiplexing</li> </ul>
5/24	• • with start-stop synchronous converters
5/26	• • combined with the use of different frequencies
7/00	Arrangements for synchronising receiver with transmitter
7/02	• Speed or phase control by the received code signals, the signals containing no special synchronisation information
7/027	<ul> <li>extracting the synchronising or clock signal from the received signal spectrum, e.g. by using a resonant or bandpass circuit [5]</li> </ul>

7/033	• using the transitions of the received signal to control the phase of the synchronising-signal-generating means, e.g. using a phase-locked
	loop [5]
7/04	Speed or phase control by synchronisation signals
7/06	• • the synchronisation signals differing from the
	information signals in amplitude, polarity, or frequency
7/08	• • the synchronisation signals recurring cyclically
7/10	• • Arrangements for initial synchronisation
9/00	Arrangements for secret or secure communication
	<u>Note(s)</u>
	In group H04L 9/06-H04L 9/32, in the absence of an indication to the contrary, classification is made in the last appropriate place.
9/06	<ul> <li>the encryption apparatus using shift registers or memories for blockwise coding, e.g. D.E.S.</li> </ul>
	systems [5]
9/08	Key distribution [5]
9/10	• with particular housing, physical features or manual controls [5]
9/12	• Transmitting and receiving encryption devices synchronised or initially set up in a particular
0/14	manner <b>[5]</b>
9/14 9/16	<ul> <li>using a plurality of keys or algorithms [5]</li> <li>the keys or algorithms being changed during</li> </ul>
9/16	the keys or algorithms being changed during operation [5]
9/18	• Encryption by serially and continuously modifying data stream elements, e.g. stream cipher systems [5]
9/20	• • Pseudorandom key sequence combined element- for-element with data sequence [5]
9/22	<ul> <li>• with particular pseudorandom sequence generator [5]</li> </ul>
9/24	• • • sequence produced by more than one generator [5]
9/26	• • • producing a nonlinear pseudorandom sequence [5]
9/28	• using particular encryption algorithm [5]
9/30	<ul> <li>Public key, i.e. encryption algorithm being computationally infeasible to invert and users' encryption keys not requiring secrecy [5]</li> </ul>
9/32	<ul> <li>including means for verifying the identity or authority of a user of the system [5]</li> </ul>
9/34	• Bits, or blocks of bits, of the telegraphic message being interchanged in time <b>[5]</b>
9/36	• with means for detecting characters not meant for transmission [5]
9/38	• Encryption being effected by mechanical apparatus, e.g. rotating cams, switches, keytape punchers <b>[5]</b>
12/00	Data switching networks (interconnection of, or
	transfer of information or other signals between,
	memories, input/output devices or central processing units G06F 13/00) <b>[5]</b>
12/02	Details [5]
12/04	• • Switchboards [5]
12/06	• • Answer-back mechanisms or circuits [5]
12/08	• • Allotting numbers to messages; Counting characters, words or messages [5]
12/10	Current supply arrangements [5]
12/12	Arrangements for remote connection or disconnection of substations or of equipment
10/4 4	thereof [5]
12/14	Charging arrangements [5]

12/16	•	<ul> <li>Arrangements for providing special services to substations [5]</li> </ul>
12/18		<ul> <li>for broadcast or conference [5]</li> </ul>
12/10 12/20		<ul> <li>for converting transmission speed from the</li> </ul>
12/20	·	inherent speed of a substation to the inherent speed of other substations <b>[5]</b>
12/22	•	• Arrangements for preventing the taking of data from a data transmission channel without authorisation (means for verifying the identity or the authority of a user of a secure or secret communication system H04L 9/32) <b>[5]</b>
12/24	•	<ul> <li>Arrangements for maintenance or administration [5]</li> </ul>
12/26	•	<ul> <li>Monitoring arrangements; Testing arrangements [5]</li> </ul>
12/28	•	characterised by path configuration, e.g. LAN [Local
		Area Networks] or WAN [Wide Area Networks]
10/10		(wireless communication networks H04W) <b>[5, 6]</b>
12/40	•	• Bus networks [5, 6]
12/403	•	• • with centralised control, e.g. polling <b>[6]</b>
12/407	•	• • with decentralised control [6]
12/413	•	<ul> <li>with random access, e.g. carrier-sense multiple-access with collision detection (CSMA-CD) [6]</li> </ul>
12/417	•	• • • with deterministic access, e.g. token passing <b>[6]</b>
12/42	•	Loop networks [5, 6]
12/423	•	• • with centralised control, e.g. polling [6]
12/427	•	• • with decentralised control [6]
12/43	•	• • • with synchronous transmission, e.g. time division multiplex (TDM), slotted rings <b>[6]</b>
12/433	•	• • • with asynchronous transmission, e.g. token ring, register insertion <b>[6]</b>
12/437	•	• • Ring fault isolation or reconfiguration [6]
12/44	•	• Star or tree networks [5, 6]
12/46	•	• Interconnection of networks <b>[5, 6]</b>
12/50	•	Circuit switching systems, i.e. systems in which the path is physically permanent during the communication <b>[5, 6]</b>
12/52	•	<ul> <li>using time division techniques (in digital transmission systems H04L 5/22) [5, 6]</li> </ul>
12/54	•	Store-and-forward switching systems (packet switching systems H04L 12/70) <b>[5, 6, 2013.01]</b>
12/58	•	• Message switching systems [5, 6]
12/60	•	<ul> <li>Manual relay systems, e.g. push-button switching [5, 6]</li> </ul>
12/62	•	• • • with perforated tape storage <b>[5, 6]</b>
12/64	•	Hybrid switching systems <b>[5, 6]</b>
12/66	•	Arrangements for connecting between networks having differing types of switching systems, e.g. gateways <b>[5, 6]</b>
12/70	•	Packet switching systems [2013.01]
12/701	•	Routing or path finding [2013.01]
12/703		<ul> <li>Route fault prevention or recovery, e.g.</li> </ul>
12//00		rerouting, route redundancy, virtual router redundancy protocol [VRRP] or hot standby router protocol [HSRP] <b>[2013.01]</b>
12/705	•	• • Loop or livelock prevention, e.g. time to live [TTL] or spanning tree [2013.01]
12/707	•	• • • using path redundancy [2013.01]
12/709	•	• • • using M+N parallel active paths [2013.01]
12/711	•	• • • • using M:N active or standby paths [2013.01]
12/713	•	• • • using node redundancy, e.g. VRRP [2013.01]

H04L

#### H04L

12/715	•	•	•	Hierarchical routing, e.g. clustered networks or
				inter-domain routing [2013.01]
12/717	•	•	•	Centralised routing [2013.01]
12/721	•	•	•	Routing procedures, e.g. shortest path routing,
				source routing, link state routing or distance
40/500				vector routing [2013.01]
12/723	•	•	•	<ul> <li>Label or tag based routing, e.g. multi- protocol label switching [MPLS] or</li> </ul>
				generalised multi-protocol label switching
				[GMPLS] [2013.01]
12/725	•	•	•	• Selecting a path with suitable quality of
				service [QoS] <b>[2013.01]</b>
12/727	•	•	•	Selecting a path with minimum
				delay <b>[2013.01]</b>
12/729	•	•	•	• • Selecting a path with suitable bandwidth
				or throughput <b>[2013.01]</b>
12/733	•	•	•	• Selecting a path with minimum length or
10/705		_	_	minimum hop count <b>[2013.01]</b>
12/735	•	•	•	<ul> <li>Disjoint routing, e.g. path disjoint or node disjoint [2013.01]</li> </ul>
12/741				Header address processing for routing, e.g.
12//41				table lookup <b>[2013.01]</b>
12/743	•	•	•	<ul> <li>using hashing techniques [2013.01]</li> </ul>
12/745	•	•	•	• using longest matching prefix <b>[2013.01]</b>
12/747	•	•	•	Address caching [2013.01]
12/749	•	•	•	Address processing over inter-domain or
				inter-network, e.g. mapping different
				addresses between IPv6 and IPv4 networks
10/851				for routing <b>[2013.01]</b>
12/751 12/753	•	•	•	<ul><li>Topology update or discovery [2013.01]</li><li>Routing tree discovery, e.g. converting from</li></ul>
12/755	•	•	•	mesh topology to tree topology [2013.01]
12/755	•	•	•	<ul> <li>Topology update consistency, e.g. link state</li> </ul>
				advertisement [LSA], time stamping or
				sequence numbers in the updates [2013.01]
12/757	•	•	•	• Synchronised activation of routing updates,
				e.g. delaying or holding routing table
12/759				<ul><li>updates [2013.01]</li><li>Dynamic adaptation of update interval, e.g.</li></ul>
12//55	-	-	-	event-driven updates <b>[2013.01]</b>
12/761	•	•	•	Broadcast or multicast routing [2013.01]
12/763	•	•	•	Shortcut routing, e.g. next hop resolution
				protocol [NHRP] [2013.01]
12/771	•	•	•	Router architecture [2013.01]
12/773	•	•	•	• for supporting layer 3 switching, e.g. IP
				switching, cell switch relay [CSR] or tag switching <b>[2013.01]</b>
12/775				<ul> <li>multiple routing entities, e.g. multiple</li> </ul>
12///3	-	-	-	software or hardware instances <b>[2013.01]</b>
12/781	•	•	•	Multiprotocol routing, e.g. for protocol
				adaptation between IPv4 and IPv6 or dual
				stack <b>[2013.01]</b>
12/801	•	•	F	ow control or congestion control [2013.01]
12/803	•	•	•	Load balancing, e.g. traffic distribution over
10/005				multiple links <b>[2013.01]</b>
12/805	•	•	•	Determination of the optimum packet size, e.g. maximum transmission unit [MTU] [2013.01]
12/807	•	•	•	Calculation or update of the congestion
				window [2013.01]
12/811	•	•	•	Bitrate adaptation in active flows [2013.01]
12/813	•	•	•	• Policy-based control, e.g. policing [2013.01]
12/815	•	•	•	• Shaping [2013.01]
12/819	•	•	•	• Leaky bucket <b>[2013.01]</b>
12/823	•	•	•	Packet dropping [2013.01]

12/825	•	•	•	• Adaptive control, at the source or intermediate nodes, upon congestion feedback, e.g. X-on X-off <b>[2013.01]</b>
12/827	•	•	•	<ul> <li>sent by intermediate network nodes [2013.01]</li> </ul>
12/829				<ul> <li>sent by the destination endpoint [2013.01]</li> </ul>
12/823				<ul> <li>Marking packets or altering packet priority</li> </ul>
12/033	•	•	•	upon congestion or for congestion prevention [2013.01]
12/835	•	•	•	• using buffer capacity information at the endpoints or transit nodes <b>[2013.01]</b>
12/841	•	•	•	Flow control actions using time consideration, e.g. round trip time [RTT] <b>[2013.01]</b>
12/851	•	•	•	Traffic type related actions, e.g. QoS or priority <b>[2013.01]</b>
12/853	•	•	•	• for real time traffic <b>[2013.01]</b>
12/855	•	•	•	<ul> <li>for signalling traffic, e.g. operations,</li> </ul>
				administration and maintenance [OAM] or acknowledge [ACK] packets <b>[2013.01]</b>
12/857	•	•	•	• Mapping QoS constraints between layers or between different networks <b>[2013.01]</b>
12/859	•	•	•	• Flow control actions based on the nature of the application, e.g. controlling web browsing or e-mail traffic <b>[2013.01]</b>
12/861	•	•	•	Packet buffering or queuing arrangements; Queue scheduling <b>[2013.01]</b>
12/863	•	•	•	<ul> <li>Queue scheduling [2013.01]</li> <li>Queue scheduling, e.g. Round Robin [2013.01]</li> </ul>
12/865	•	•	•	<ul> <li>Priority-based scheduling [2013.01]</li> </ul>
12/867	•			<ul> <li>Fair share scheduling [2013.01]</li> </ul>
12/869				<ul> <li>Multilevel scheduling; Hierarchical</li> </ul>
12/005				scheduling [2013.01]
12/873	•	•	•	<ul> <li>Bandwidth-aware scheduling [2013.01]</li> </ul>
12/875	•	•	•	<ul> <li>Delay-aware scheduling [2013.01]</li> </ul>
12/877	•			<ul> <li>Distribution of residual bandwidth, e.g.</li> </ul>
12/0//				distribution of unused bandwidth to best effort traffic [BET] <b>[2013.01]</b>
12/879	•	•	•	• Single buffer operations, e.g. buffer pointers or buffer descriptors <b>[2013.01]</b>
12/883	•	•	•	<ul> <li>Packet storage using a linked list of buffers [2013.01]</li> </ul>
12/885	•	•	•	<ul> <li>Jitter compensation buffering [2013.01]</li> </ul>
12/891	•	•	•	Flow control of aggregated links or flows [2013.01]
12/893	•	•	•	Connection splitting, e.g. IP splitting [2013.01]
12/901	•	•	In	gress point selection by the source endpoint, e.g. ternet service provider [ISP] or point of presence POP] selection <b>[2013.01]</b>
12/903	•	•	•	Selection among a plurality of different networks <b>[2013.01]</b>
12/905	•	•	•	• Dynamic network selection or re-selection, e.g. after degradation of quality <b>[2013.01]</b>
12/911	•	•		etwork admission control and resource location, e.g. bandwidth allocation or in-call
				negotiation [2013.01]
12/913	•	•	•	Reservation actions involving intermediate
				nodes, e.g. resource reservation protocol [RSVP] <b>[2013.01]</b>
12/915	•	•	•	Reservation actions involving several network domains, e.g. multilateral agreements or mapping of resources <b>[2013.01]</b>
12/917				Dynamic resource allocation, e.g. in-call
14/31/		5	5	renegotiation requested by the user or upon changing network conditions requested by the
				network <b>[2013.01]</b>
12/919	•	•	•	• initiated by the source endpoint <b>[2013.01]</b>
12/923	•	•	•	• initiated by the network <b>[2013.01]</b>

12/925	• • • Reservation of resources at the destination
	endpoint <b>[2013.01]</b>
12/927	• • • Allocation of resources based on type of traffic,
10/001	QoS or priority [2013.01]
12/931	• • Switch fabric architecture [2013.01]
12/933	• • • Switch core, e.g. crossbar, shared memory or shared medium [2013.01]
12/935	<ul> <li>• • Switch interfaces, e.g. port details [2013.01]</li> </ul>
12/937	<ul> <li>• • Switch control, e.g. arbitration [2013.01]</li> </ul>
12/939	<ul> <li>Provisions for redundant switching, e.g. using</li> </ul>
12/000	parallel switching planes <b>[2013.01]</b>
12/943	• • • Transferring a complete packet or cell from
	each plane <b>[2013.01]</b>
12/945	• • • • Transferring a part of the packet or cell from
	each plane, e.g. bit slice [2013.01]
12/947	• • Address processing within a device, e.g. using
	internal ID or tags for routing within a switch [2013.01]
12/951	<ul> <li>Assembling and disassembling of packets, e.g.</li> </ul>
12/331	segmentation and reassembly [SAR] in
	asynchronous transfer mode [ATM] [2013.01]
12/953	• • Packet sequencing arrangements for supporting
	message reassembly, e.g. packet sequence
	number <b>[2013.01]</b>
12/955	• • Padding or de-padding, e.g. inserting or
	removing dummy data in or from unused packet segments <b>[2013.01]</b>
13/00	Details of the apparatus or circuits covered by
10 (00	groups H04L 15/00 or H04L 17/00
13/02	Details not particular to receiver or transmitter
13/04	Driving mechanisms; Clutches
13/06	Tape or page guiding or feeding devices
13/08	Intermediate storage means     Distributors
13/10	• • Distributors
	<ul><li>Distributors</li><li>Non-mechanical distributors, e.g. relay</li></ul>
13/10	• • Distributors
13/10 13/12	<ul> <li>Distributors</li> <li>Non-mechanical distributors, e.g. relay distributors</li> </ul>
13/10 13/12 13/14	<ul> <li>Distributors</li> <li>Non-mechanical distributors, e.g. relay distributors</li> <li>Electronic distributors</li> </ul>

2//1 <del>4</del>	Demodulator circuits, receiver circuits	29/14 • Counter-measures to a fault [5]

H04M TELEPHONIC COMMUNICATION (circuits for controlling other apparatus via a telephone cable and not involving telephone switching apparatus G08)

#### Note(s)

2.

- This subclass covers : 1
  - telephonic communication systems combined with other electrical systems;
  - testing arrangements specially adapted for telephonic communication systems.
  - In this subclass, the following terms or expressions are used with the meanings indicated:
  - "subscriber" is a general term for terminal equipment, e.g. telephones for public use;
    - "substation" means subscriber or monitoring equipment which may connect a single subscriber to a line without choice as to subscriber;
  - "satellite" is a type of exchange the operation of which depends upon control signals received from a supervisory exchange;
  - "switching centres" includes exchanges and satellites.

#### Subclass index

#### TELEPHONIC SYSTEMS

Combined; party-line systems; prepayment systems......11/00, 13/00, 17/00

### EQUIPMENT AND ARRANGEMENTS

EQUIMENTINE INCOMENTS	
Equipment	1/00
Exchanges: automatic; manual	
Interconnection arrangements: centralised; non-centralised	
Monitoring and control; supply arrangements	
SUBJECT MATTER NOT PROVIDED FOR IN OTHER GROUPS OF THIS SUBCLASS	

1/00	<b>Substation equipment, e.g. for use by subscribers</b> (subscriber services or facilities provided at exchanges	1/274 • • • with provision for storing more than one subscriber number at a time <b>[2]</b>
	H04M 3/00; prepayment telephone coin boxes H04M 17/00; current supply arrangements H04M 19/08) <b>[1, 7]</b>	1/2745 • • • using static electronic memories, i.e. memories whose operation does not require relative movement between storage means
1/02	Constructional features of telephone sets	and a transducer, e.g. chips [7]
1/03	<ul> <li>Constructional features of telephone transmitters or receivers, e.g. telephone hand-sets [2]</li> </ul>	1/275 • • • • implemented by means of portable electronic directories <b>[7]</b>
1/04 1/05	<ul> <li>Supports for telephone transmitters or receivers</li> <li>specially adapted for use on head, throat or</li> </ul>	1/2755 • • • • • whose contents are provided by optical scanning <b>[7]</b>
	breast	1/276 • • • • using magnetic recording, e.g. on tape [2]
1/06	• • • Hooks; Cradles	1/278 • • • • using punched cards or tapes [2]
1/08	• • • associated with switches operated by the weight of the receiver or hand-set	1/30 • • Devices which can set up and transmit only one digit at a time
1/10	<ul> <li>• sassociated with switches operated by magnetic effect due to proximity of receiver or hand-set</li> </ul>	<ul> <li>1/31 • • by interrupting current to generate trains of pulses; by periodically opening and closing contacts to generate trains of pulses [2]</li> </ul>
1/11	Supports for sets, e.g. incorporating armrests	1/315 • • • Clutches, spring assemblies, speed
1/12 1/13	• • Adjustable supports, e.g. extensible	regulators, e.g. centrifugal brakes (H04M 1/32-H04M 1/40 take
1/13	<ul> <li>• • pantographic</li> <li>• with resilient means to eliminate extraneous</li> </ul>	precedence) [3]
	vibrations	1/32 • • • Locking setting devices during transmission to prevent interference by user
1/15	Protecting or guiding telephone cords [5]	1/34 • • • Lost-motion or other arrangements for
1/17	Hygienic or sanitary devices on telephone equipment (for mouthpieces or earpieces H04R 1/12) [2]	ensuring a pause between successive digit transmissions
1/18	• • Telephone sets specially adapted for use in ships,	1/38 • • • Pulses transmitted by a movement variably limited by the setting of a stop
	mines, or other places exposed to adverse	1/40 • • • • wherein the setting-operation short-circuits
1/19	<ul> <li>environment (H04M 1/19 takes precedence)</li> <li>Arrangements of transmitters, receivers, or complete sets to prevent eavesdropping, to</li> </ul>	or open-circuits the transmitting mechanism during a variable part of a cycle
	attenuate local noise or to prevent undesired	1/50 • • • by generating or selecting currents of
	transmission; Mouthpieces or receivers specially	predetermined frequencies or combinations of frequencies <b>[2]</b>
	adapted therefor (circuit arrangements for preventing eavesdropping H04M 1/68; telephone	1/515 • • by generating or selecting signals other than trains
	cabinets E04H 1/14)	of pulses of similar shape, or signals other than
1/20	<ul> <li>Arrangements for preventing acoustic feedback (H04M 1/62 takes precedence)</li> </ul>	currents of one or more different frequencies, e.g. generation of dc signals of alternating polarity,
1/21	• • Combinations with auxiliary equipment, e.g. with	coded pulses or impedance dialling [2]
1/215	<ul><li>clocks or memoranda pads</li><li>by non-intrusive coupling means, e.g. acoustic</li></ul>	<ul><li>1/52 • Arrangements wherein a dial or the like is mechanically coupled to a line selector</li></ul>
	couplers [7]	1/53 • • Generation of additional signals, e.g. additional
1/22	• Illumination; Arrangements for improving the visibility of characters on dials	pulses <b>[2]</b> 1/54 • • Arrangements wherein a dial or the like
1/23	Construction or mounting of dials or of equivalent	generates identifying signals, e.g. in party-line
	devices; Means for facilitating the use thereof (by	systems [2]
1/04	improving visibility H04M 1/22)	1/56 • Arrangements for indicating or recording the called number at the calling subscriber's set
1/24	Arrangements for testing     There are an including your guidence or factors	1/57 • Arrangements for indicating or recording the number
1/247	• Telephone sets including user guidance or feature selection means facilitating their use <b>[7]</b>	of the calling subscriber at the called subscriber's set (at the operator set in a manual exchange
1/253	• Telephone sets using digital voice transmission [7]	H04M 5/20) [2]
1/26	• Devices for calling a subscriber (H04M 1/66 takes	1/58 • Anti-side-tone circuits
1/07	<ul><li>precedence) [1, 7]</li><li>Devices whereby a plurality of signals may be</li></ul>	1/60 • including speech amplifiers

19/04	the ringing-current being generated at the substations
19/06	<ul> <li>in which current supply sources at subordinate switching centres are charged from the main exchange</li> </ul>
19/08	<ul> <li>with current supply sources at the substations (generating ringing current H04M 19/04) [1, 7]</li> </ul>

99/00 Subject matter not provided for in other groups of this subclass [2006.01]

#### H04N PICTORIAL COMMUNICATION, e.g. TELEVISION [4]

#### <u>Note(s)</u>

#### 1. This subclass <u>covers</u>:

- transmission of pictures or their transient or permanent reproduction either locally or remotely, by methods involving both the following steps:
  - step (a): the scanning of a picture, i.e. resolving the whole picture-containing area into individual picture-elements and the derivation of picture-representative electric signals related thereto, simultaneously or in sequence; step (b): the reproduction of the whole picture-containing area by the reproduction of individual picture-elements into which the picture is resolved by means of picture-representative electric signals derived therefrom, simultaneously or in sequence;
  - (in group H04N 1/00) systems for the transmission or the reproduction of arbitrarily composed pictures or patterns in which the local light variations composing a picture are <u>not</u> subject to variation with time, e.g. documents (both written and printed), maps, charts, photographs (other than cinematograph films);
  - circuits specially designed for dealing with pictorial communication signals, e.g. television signals, as distinct from merely signals of a particular frequency range.
- 2. This subclass <u>does not cover</u>:
  - circuits or other parts of systems which form the subject of other subclasses, which are covered by the corresponding subclasses, e.g. H03C, H03F, H03J, H04B, H04H;
  - systems in which legible alphanumeric or like character forms are analysed according to step (a) of Note (1) to derive an electric signal from which the character is recognised by comparison with stored information, which are covered by subclass G06K;
  - systems for the direct photographic copying of an original picture in which an electric signal representative of the picture is derived according to the said step (a) and employed to modify the operation of the system, e.g. to control exposure, which are covered by class G03;
  - systems for the reproduction according to step (b) of Note (1) of pictures comprising alphanumeric or like character forms but involving the production of the <u>equivalent</u> of a signal which would be derived according to the above-mentioned step (a), e.g. by cams, punched card or tape, coded control signal, or other means, which are covered by the subclass for the application, e.g. G01D, G06T, H04L;
  - systems for the reproduction according to the above-mentioned step (b) of pictures comprising alphanumeric or like character forms and involving the generation according to the above-mentioned step (a) of picture-representative electric signals from a prearranged assembly of such characters, or records thereof, forming an integral part of the systems, which are covered by the subclass for the application, e.g. B41B, G06K, subject to those applications which are covered by this subclass;
  - printing, duplication or marking processes, or materials therefor, which are covered by the relevant subclasses, e.g. B41C, B41J, B41M, G03C, G03F, G03G.
- 3. In this subclass, the following expression is used with the meaning indicated:
  - "television systems" means those systems for the transmission and reproduction of arbitrarily composed pictures in which the local light variations composing a picture <u>may</u> change with time, e.g. natural "live" scenes, recordings of such scenes such as cinematograph films.

1/06 1/08

5/00	Details of television systems (scanning details or						
	combination thereof with generation of supply voltage						
			N 3/00; specially adapted for colour television				
	H04N 9/00; servers specially adapted for the distribution of the d						
			ntent H04N 21/20; client devices specially adapted				
	H	for the reception of or interaction with content H04N 21/40) <b>[4, 2011.01]</b>					
5/04	•		ynchronising (for television systems using pulse				
			ode modulation H04N 7/24) [4]				
5/05	•	•	Synchronising circuits with arrangements for				
			extending range of synchronisation, e.g. by using				
			switching between several time constants [2]				
5/06	•	•	Generation of synchronising signals				
5/067	•	•	• Arrangements or circuits at the transmitter end <b>[4]</b>				
5/073			<ul> <li>for mutually locking plural sources of</li> </ul>				
5/0/5			synchronising signals, e.g. studios or relay				
			stations [4]				
5/08	•	•	Separation of synchronising signals from picture				
			signals				
5/10	•	•	• Separation of line synchronising signal from				
			frame synchronising signal				
5/12	•	•	Devices in which the synchronising signals are				
			only operative if a phase difference occurs				
			between synchronising and synchronised scanning				
		_	devices, e.g. flywheel synchronising [2]				
5/14	•		icture signal circuitry for video frequency region				
E /1C		(1	I04N 5/222 takes precedence) <b>[2]</b>				
5/16	•	•	Circuitry for reinsertion of dc and slowly varying components of signal; Circuitry for preservation of				
			black or white level				
5/18			<ul> <li>by means of "clamp" circuit operated by</li> </ul>				
5/10			switching circuit				
5/20	•	•	Circuitry for controlling amplitude response				
5/202	•	•	• Gamma control [4]				
5/205	•	•	• for correcting amplitude <u>versus</u> frequency				
			characteristic [4]				
5/208	•	•	• • for compensating for attenuation of high				
			frequency components, e.g. crispening,				
			aperture distortion correction [4]				
5/21	•	•	Circuitry for suppressing or minimising				
			disturbance, e.g. moire, halo (suppression of noise				
E /010			in television recording H04N 5/911)				
5/213	•	•	Circuitry for suppressing or minimising impulsive noise (H04N 5/217 takes				
			precedence) [4]				
5/217			<ul> <li>in picture signal generation (noise reduction or</li> </ul>				
5, 21/			noise suppression involving solid-state image				
			sensors H04N 5/357) <b>[4, 2011.01]</b>				
5/222	•	St	udio circuitry; Studio devices; Studio				
		ec	Juipment [4]				
5/225	•	•	Television cameras [4]				
5/228	•	•	<ul> <li>Circuit details for pick-up tubes [4]</li> </ul>				
5/232	•	•	• Devices for controlling television cameras, e.g.				
			remote control (H04N 5/235 takes				
			precedence) [4]				
5/235	•	•	• Circuitry for compensating for variation in the				
-			brightness of the object <b>[4]</b>				
5/238	•	•	• • by influencing optical part of the camera [4]				
5/243	•	•	• • by influencing the picture signal <b>[4]</b>				
5/247	•	•	• Arrangement of television cameras <b>[4]</b>				
5/253	•	•	Picture signal generating by scanning motion				
			picture films or slide opaques, e.g. for telecine (scanning details therefor H04N 3/36) [4]				
5/257			Picture signal generators using flying-spot				
51231	-	-	scanners (H04N 5/253 takes precedence) <b>[4]</b>				
			i i ( i i i i i i i i i i i i i i i i				

5/262	•	•	ch	udio circuits, e.g. for mixing, switching-over, ange of character of image, other special fects <b>[4]</b>
5/265	•	•	•	Mixing [4]
5/268				-
5/200	•	•	•	Signal distribution or switching (for broadcasting H04H 20/00) <b>[4]</b>
5/272	•	•	•	Means for inserting a foreground image in a background image, i.e. inlay, outlay <b>[4]</b>
5/275	•	•	•	• Generation of keying signals [4]
5/278				Subtitling [4]
5/28			м	obile studios
5/30		т		sforming light or analogous information into
5/50	•	el	ect	ric information (H04N 5/222 takes precedence; hing details H04N 3/00) <b>[2, 4, 7]</b>
5/32	•	•	Tr	ansforming X-rays
5/321	•	•	•	with video transmission of fluoroscopic
0/011				images [5]
5/325	•	•	•	• Image enhancement, e.g. by subtraction
			_	techniques using polyenergetic X-rays [5]
5/33	•	•	Tr	ansforming infra-red radiation [2]
5/335	•	•		ing solid-state image sensors [SSIS]
				104N 5/32, H04N 5/33 take
			pr	ecedence) <b>[4, 2011.01]</b>
	N	[		[2011.01]
	IN	ote	<u> (S)</u>	[2011.01]
	Ir	ı th	is g	group, at each hierarchical level, in the absence
	0	f ar	ı in	dication to the contrary, classification is made in
	th	ne f	irst	appropriate place.
5/341	•	•	•	Extracting pixel data from an image sensor by
				controlling scanning circuits, e.g. by modifying
				the number of pixels having been sampled or to
				be sampled <b>[2011.01]</b>
5/343	•	•	•	• by switching between different modes of
				operation using different resolutions or
				aspect ratios, e.g. between still and video
				mode or between interlaced and non-
				interlaced mode [2011.01]
5/345	•	•	•	• by partially reading an SSIS array [2011.01]
5/347	•	•	•	• by combining or binning pixels in
				SSIS [2011.01]
5/349	•	•	•	• for increasing resolution by shifting the
				sensor relative to the scene <b>[2011.01]</b>
5/351	•	•	•	Control of the SSIS depending on the scene,
				e.g. brightness or motion in the scene <b>[2011.01]</b>
5/353	•	•	•	• Control of the integration time <b>[2011.01]</b>
5/355	•	•	•	• Control of the dynamic range <b>[2011.01]</b>
5/357				Noise processing, e.g. detecting, correcting,
5/55/				reducing or removing noise <b>[2011.01]</b>
5/359	•	•	•	• applied to excess charges produced by the
				exposure, e.g. smear, blooming, ghost
				image, crosstalk or leakage between
				pixels <b>[2011.01]</b>
5/361	•	•	•	• applied to dark current <b>[2011.01]</b>
5/363	•	•	•	<ul> <li>applied to reset noise, e.g. KTC</li> </ul>
5/505				noise <b>[2011.01]</b>
5/365				applied to fixed-pattern noise, e.g. non-
5/505				uniformity of response <b>[2011.01]</b>
5/367				<ul> <li>applied to defects, e.g. non-responsive</li> </ul>
5/50/	-	-	-	pixels [2011.01]
5/369				SSIS architecture; Circuitry associated
5, 505				therewith [2011.01]
5/372	•	•	•	Charge-coupled device [CCD] sensors; Time
5,572				delay and integration [TDI] registers or shift
				registers specially adapted for
				SSIS [2011.01]
				• • using frame interline transfer

5/3722 • • • • using frame interline transfer [FIT] [2011.01]

- (0-0-		
5/3725	•	• • • • using frame transfer [FT] <b>[2011.01]</b>
5/3728	•	• • • • using interline transfer [IT] [2011.01]
5/374	•	• • • Addressed sensors, e.g. MOS or CMOS
5/3745	•	<ul> <li>sensors [2011.01]</li> <li>• • • having additional components embedded within a pixel or connected to a group of</li> </ul>
		pixels within a sensor matrix, e.g. memories, A/D converters, pixel amplifiers, shared circuits or shared
		components [2011.01]
5/376		• • • Addressing circuits [2011.01]
5/378		<ul> <li>• Readout circuits, e.g. correlated double</li> </ul>
5/5/0	-	sampling [CDS] circuits, output amplifiers or A/D converters <b>[2011.01]</b>
5/38	•	Transmitter circuitry (H04N 5/14 takes precedence) [4]
5/40	•	Modulation circuits
5/42	•	<ul> <li>for transmitting at will black-and-white or colour</li> </ul>
		signals
5/44	•	Receiver circuitry (H04N 5/14 takes precedence) [4, 2011.01]
5/445	•	<ul> <li>for displaying additional information (H04N 5/50 takes precedence) [4, 2011.01]</li> </ul>
5/45	•	• • Picture in picture [4, 2011.01]
5/455	•	Demodulation-circuits [4]
5/46	•	<ul> <li>for receiving on more than one standard at will</li> </ul>
		(deflecting circuits of multi-standard receivers H04N 3/27) [4]
5/50	•	<ul> <li>Tuning indicators; Automatic tuning control [4]</li> </ul>
5/52	•	Automatic gain control [4]
5/53	•	Keyed automatic gain control [4]
5/54	•	<ul> <li>for positively-modulated picture signals (H04N 5/53 takes precedence) [4]</li> </ul>
5/56	•	<ul> <li>for negatively-modulated picture signals (H04N 5/53 takes precedence) [4]</li> </ul>
5/57	•	Control of contrast or brightness [4]
5/58	•	• • in dependence upon ambient light [4]
5/59	•	• • in dependence upon beam current of cathode
		ray tube [4]
5/60	•	<ul> <li>for the sound signals</li> </ul>
5/62	•	Intercarrier circuits, i.e. heterodyning sound and vision carriers
5/63	•	Generation or supply of power specially adapted for
		television receivers (generation of supply voltages in
		combination with electron beam deflecting
		H04N 3/18) [4]
5/64	•	Constructional details of receivers, e.g. cabinets, dust
		covers (furniture aspects A47B, e.g. A47B 81/06) [2]
5/645	•	Mounting of picture tube on chassis or in housing
5/65	•	<ul> <li>Holding-devices for protective discs or for picture masks</li> </ul>
5/655	•	<ul> <li>Construction or mounting of chassis, e.g. for varying the elevation of the tube</li> </ul>
5/66		Transforming electric information into light
5/00		information (scanning details H04N 3/00)
5/68	•	Circuit details for cathode-ray display tubes
5/70		Circuit details for electroluminescent devices
5/72	•	Modifying the appearance of television pictures by
		optical filters or diffusing screens
5/74	•	Projection arrangements for image reproduction, e.g.
		using eidophor
5/76	•	Television signal recording [3, 4]
5/761	•	• Systems for programming the time at which
		predetermined television channels will be selected
		for recording [7]

5/7613	•	•	<ul> <li>by using data entered by the user and a reference timing clock incorporated in the recorder [7]</li> </ul>
5/7617	•	•	• by using data entered by the user and reference data transmitted by the broadcasting station [7]
5/765	•	•	Interface circuits between an apparatus for recording and another apparatus (associated working of recording or reproducing apparatus with a television camera or receiver in which the television signal is not significantly involved G11B 31/00) <b>[6]</b>
5/77	•	•	<ul> <li>between a recording apparatus and a television camera [6]</li> </ul>
5/775	•	•	<ul> <li>between a recording apparatus and a television receiver [6]</li> </ul>
5/78	•	•	using magnetic recording (H04N 5/91 takes precedence) <b>[3]</b>
5/781			• on discs or drums [3]
	·	•	
5/782	•	•	• on tape <b>[3]</b>
5/7822	•	•	• • with stationary magnetic heads [6]
5/7824	•	•	• • with rotating magnetic heads [6]
5/7826			<ul> <li>involving helical scanning of the</li> </ul>
	•	•	magnetic tape [6]
5/7828	•	•	• • • involving transversal scanning of the magnetic tape <b>[6]</b>
5/783	•	•	• • Adaptations for reproducing at a rate different from the recording rate [3]
5/784	•	•	• on a sheet [6]
5/80	•	•	using electrostatic recording (H04N 5/91 takes
5/82	•	•	<ul><li>precedence) [3]</li><li>using deformable thermoplastic recording</li></ul>
	_	_	medium
5/83	•	•	• • on discs or drums [3]
5/84	•	•	using optical recording (H04N 5/80, H04N 5/89, H04N 5/91 take precedence) <b>[3, 4]</b>
5/85	•	•	on discs or drums [3]
5/87	•	•	<ul> <li>Producing a motion picture film from a television signal [3, 4]</li> </ul>
5/89	•	•	using holographic recording (H04N 5/91 take precedence) [3]
5/90	•	•	• on discs or drums [3]
5/903	•	•	using variable electrical capacitive recording
E (00E			(H04N 5/91 takes precedence) [4]
5/907	•	•	using static stores, e.g. storage tubes, semiconductor memories (H04N 5/91 takes
			precedence; based on relative movement between
			record carrier and transducer H04N 5/78- H04N 5/903) <b>[4]</b>
5/91	•	•	Television signal processing therefor (of colour
			signals H04N 9/79) <b>[3]</b>
5/911	•	•	• for the suppression of noise <b>[6]</b>
5/913			<ul> <li>for scrambling [6]</li> </ul>
	•	•	
5/915	•	•	<ul> <li>for field- or frame-skip recording or reproducing [6]</li> </ul>
5/917	•	•	<ul> <li>for bandwidth reduction (using pulse code modulation H04N 7/24) [6]</li> </ul>
5/919	•	•	<ul> <li>by dividing samples or signal segments, e.g. television lines, among a plurality of recording channels [6]</li> </ul>
5/02			-
5/92	•	•	• Transformation of the television signal for
			recording, e.g. modulation, frequency
			changing; Inverse transformation for
			playback <b>[3]</b>
5/921	•	•	• • by recording or reproducing the baseband signal <b>[6]</b>

5/922	•	•	•	•	by modulation of the signal on a carrier wave, e.g. amplitude or frequency
					modulation [6]
5/923	•	•	•	•	using preemphasis of the signal before
					modulation and deemphasis of the signal after demodulation <b>[6]</b>
F (00.4	_				
5/924	•	•	•	•	using duty cycle modulation <b>[6]</b>
5/926	•	•	•	•	by pulse code modulation (H04N 5/919 takes precedence) <b>[6]</b>
5/928					the sound signal being pulse code modulated
5/920	•	·	•	•	and recorded in time division multiplex with
					the modulated video signal [6]
5/93				R	egeneration of the television signal or of
5/55					lected parts thereof <b>[3]</b>
5/931	•	•	•	•	for restoring the level of the reproduced
					signal [6]
5/932	•	•	•	•	Regeneration of analogue synchronisation
					signals [6]
5/935	•	•	•	•	Regeneration of digital synchronisation
					signals [6]
5/937	•	•	•	•	by assembling picture element blocks in an
					intermediate store [6]
5/94	•	•	•	•	Signal drop-out compensation [3]
5/945	•	•	•	•	<ul> <li>for signals recorded by pulse code</li> </ul>
					modulation [6]
5/95	•	•	•	•	Time-base error compensation [3]
5/953	•	•	•	•	<ul> <li>by using an analogue memory, e.g. a</li> </ul>
					CCD-shift register, the delay of which is
					controlled by a voltage controlled
					oscillator [6]
5/956	•	•	•	•	• by using a digital memory with
					independent write-in and read-out clock
					denerators 16
					generators [6]

77	•	Circuits for processing the brightness signal and the

9/

9/84

9/888

- 9/ chrominance signal relative to each other, e.g. adjusting the phase of the brightness signal relative to the colour signal, correcting differential gain or differential phase (circuits for matrixing H04N 9/67) [4]
- 9/78 for separating the brightness signal or the chrominance signal from the colour television signal, e.g. using comb filter [4]
- 9/79Processing of colour television signals in connection with recording [4]
- 9/793 for controlling the level of the chrominance signal, e.g. by means of automatic chroma control circuits [6]
- 9/797 . . for recording the signal in a plurality of channels, the bandwidth of each channel being less than the bandwidth of the signal (H04N 9/804, H04N 9/81, H04N 9/82 take precedence) [6]
- 9/80 Transformation of the television signal for recording, e.g. modulation, frequency changing; Inverse transformation for playback [4]
- 9/802 involving processing of the sound signal (H04N 9/806, H04N 9/835 take precedence) [6] 9/804
  - involving pulse code modulation of the colour picture signal components [6]
- 9/806 with processing of the sound signal [6] 9/808 involving pulse code modulation of the
- composite colour video-signal [6] 9/81 the individual colour picture signal components
- being recorded sequentially only [4] 9/815 the luminance signal and the sequential colour component signals being recorded in separate recording channels [6]
- the individual colour picture signal components 9/82 being recorded simultaneously only [4] 9/825
  - the luminance and chrominance signals being recorded in separate channels [6] the recorded chrominance signal occupying
- 9/83 a frequency band under the frequency band of the recorded brightness signal [4]
- 9/835 involving processing of the sound signal [6] the recorded signal showing a feature,
- which is different in adjacent track parts, e.g. different phase or frequency [4] the recorded brightness signal occupying a 9/85 frequency band totally overlapping the frequency band of the recorded chrominance
- signal, e.g. frequency interleaving [4] the individual colour picture signal components 9/86 being recorded sequentially and simultaneously, e.g. corresponding to SECAM-system [4]
- Regeneration of colour television signals 9/87 (H04N 9/80 takes precedence) [4]
- for restoring the colour component sequence of 9/873 the reproduced signal [6] by assembling picture element blocks in an 9/877
- intermediate memory [6] 9/88 Signal drop-out compensation [4]
- 9/882 the signal being a composite colour television signal [6] 9/885 using a digital intermediate memory [6]
  - for signals recorded by pulse code
- modulation [6] 9/89 Time-base error compensation [4]

9/893	<ul> <li>• • • using an analogue memory, e.g. a CCD-shift register, the delay of which is controlled by a voltage controlled oscillator [6]</li> </ul>
9/896	• • • using a digital memory with independent write-in and read-out clock generators <b>[6]</b>
9/898	<ul> <li>• using frequency multiplication of the reproduced colour signal with another auxiliary reproduced signal, e.g. a pilot signal carrier [6]</li> </ul>

10,00					Hierarchical motion estimation [2014.01]
19/533	•	•	•	•	Motion estimation using multistep search,
					e.g. 2D-log search or one-at-a-time search [OTS] <b>[2014.01]</b>
19/537					Motion estimation other than block-
10/00/					based [2014.01]
19/54	•	•	•	•	• using feature points or meshes [2014.01]
19/543	•	•	•	•	• using regions [2014.01]
19/547	•	•	•	•	Motion estimation performed in a transform domain [2014.01]
19/55	•	•	•	•	Motion estimation with spatial constraints,
10,00					e.g. at image or region borders [2014.01]
19/553	•	•	•	•	Motion estimation dealing with
19/557					occlusions <b>[2014.01]</b> Motion estimation characterised by stopping
19/33/	•	•	•	•	computation or iteration based on certain
					criteria, e.g. error magnitude being too large
					or early exit <b>[2014.01]</b>
19/56	•	•	•	•	Motion estimation with initialisation of the vector search, e.g. estimating a good
					candidate to initiate a search [2014.01]
19/563	•	•	•	•	Motion estimation with padding, i.e. with
					filling of non-object values in an arbitrarily
					shaped picture block or region for estimation purposes <b>[2014.01]</b>
19/567	•	•	•	•	Motion estimation based on rate distortion
					criteria <b>[2014.01]</b>
19/57	•	•	•	•	Motion estimation characterised by a search
					window with variable size or shape <b>[2014.01]</b>
19/573	•	•	•	•	Motion compensation with multiple frame
					prediction using two or more reference
					frames in a given prediction direction <b>[2014.01]</b>
19/577	•	•	•	•	Motion compensation with bidirectional
					frame interpolation, i.e. using B-
10/50					pictures <b>[2014.01]</b>
19/58	•	•	•	•	Motion compensation with long-term prediction, i.e. the reference frame for a
					current frame not being the temporally
					closest one (H04N 19/23 takes
					precedence) <b>[2014.01]</b>

19/583	•	• • Motion compensation with overlapping blocks [2014.01]
19/587	•	• involving temporal sub-sampling or interpolation, e.g. decimation or subsequent interpolation of
		pictures in a video sequence [2014.01]
19/59	•	• involving spatial sub-sampling or interpolation,
		e.g. alteration of picture size or
		resolution <b>[2014.01]</b>
19/593	•	<ul> <li>involving spatial prediction techniques [2014.01]</li> </ul>
19/597	•	<ul> <li>specially adapted for multi-view video sequence encoding [2014.01]</li> </ul>
19/60	•	using transform coding [2014.01]
19/61	•	• in combination with predictive coding [2014.01]
19/615	•	<ul> <li>using motion compensated temporal filtering [MCTF] [2014.01]</li> </ul>
19/62	•	• by frequency transforming in three dimensions (H04N 19/63 takes precedence) [2014.01]
19/625	•	• using discrete cosine transform [DCT] [2014.01]
19/63	•	• using sub-band based transform, e.g.
10/00		wavelets [2014.01]
19/635	•	• • characterised by filter definition or
		implementation details [2014.01]
19/64	•	• characterised by ordering of coefficients or of bits for transmission [2014.01]
19/645	•	• • • by grouping of coefficients into blocks after the transform [2014.01]
19/65	•	using error resilience [2014.01]
19/66	•	• involving data partitioning, i.e. separation of data
		into packets or partitions according to importance [2014.01]
19/67	•	• involving unequal error protection [UEP], i.e.
		providing protection according to the importance
		of the data <b>[2014.01]</b>
19/68	•	<ul> <li>involving the insertion of resynchronisation</li> </ul>
		markers into the bitstream [2014.01]
19/69	•	<ul> <li>involving reversible variable length codes [RVLC] [2014.01]</li> </ul>
19/70	•	characterised by syntax aspects related to video
		coding, e.g. related to compression
		standards [2014.01]
19/80	•	Details of filtering operations specially adapted for
		video compression, e.g. for pixel interpolation
		(H04N 19/635, H04N 19/86 take precedence) [2014.01]
19/82		<ul> <li>involving filtering within a prediction</li> </ul>
15/02		loop [2014.01]
19/85	•	using pre-processing or post-processing specially
		adapted for video compression [2014.01]
19/86	•	<ul> <li>involving reduction of coding artifacts, e.g. of blockiness [2014.01]</li> </ul>
19/87	•	• involving scene cut or scene change detection in combination with video compression [2014.01]
19/88	•	• involving rearrangement of data among different
		coding units, e.g. shuffling, interleaving,
		scrambling or permutation of pixel data or
		permutation of transform coefficient data among
		different blocks [2014.01]
19/89	•	• involving methods or arrangements for detection of transmission errors at the decoder [2014.01]
19/895	•	<ul> <li>in combination with error</li> </ul>
2. 500		concealment [2014.01]
19/90	•	using coding techniques not provided for in groups
		H04N 19/10-H04N 19/85, e.g. fractals [2014.01]
19/91	•	• Entropy coding, e.g. variable length coding [VLC]
		or arithmetic coding [2014.01]
19/93	•	Run-length coding [2014.01]
19/94	•	Vector quantisation [2014.01]

- 19/96 Tree coding, e.g. quad-tree coding [2014.01]
- 19/97 • Matching pursuit coding [2014.01]
- 19/98 • Adaptive-dynamic-range coding
  - [ADRC] **[2014.01]**
- 21/00 Selective content distribution, e.g. interactive television, VOD [Video On Demand] (broadcast communication H04H; arrangements, apparatus, circuits or systems for communication control or processing being characterised by a protocol H04L 29/06; real-time bi-directional transmission of motion video data H04N 7/14) [2011.01]

#### Note(s) [2011.01]

- 1. This group <u>covers</u>:
  - interactive video distribution processes, systems, or elements thereof, which are characterised by point-to-multipoint system configurations, and which are mainly used for motion video data unidirectional distribution or delivery resulting from interactions between systems operators, e.g. access or service providers, or users e.g. subscribers, and system elements.
    - such systems include dedicated communication systems, such as television distribution systems, which primarily distribute or deliver motion video data in the manner indicated, which may, in addition, provide a framework for further, diverse data communications or services in either unidirectional or bi-directional form. However, video will occupy most of the downlink bandwidth in the distribution process.
    - typically, system operators interface with transmitter-side elements or users' interface with receiver-side elements in order to facilitate, through interaction with such elements, the dynamic control of data processing or data flow at various points in the system. This interaction is typically occasional or intermittent in nature.
       processes, systems or elements thereof
    - specially adapted to the generation, distribution and processing of data, which is either associated with video content, e.g. metadata, ratings, or related to the user or his environment and which has been actively or passively gathered. This data is either used to facilitate interaction or to alter or target the content.
- 2. In this main group, at each hierarchical level, in the absence of an indication to the contrary, classification is made in the first appropriate place.
- 21/20 Servers specifically adapted for the distribution of content, e.g. VOD servers; Operations thereof [2011.01]
  21/21 Server components or server architectures [2011.01]
  21/214 Specialised server platform, e.g. server located in an airplane, hotel or hospital [2011.01]
- 21/218 • Source of audio or video content, e.g. local disk arrays [2011.01]
  21/2183 • Cache memory [2011.01]
  21/2187 • Live feed [2011.01]
- 21/222 • Secondary servers, e.g. proxy server or cable television Head-end **[2011.01]**
- 21/2225 • Local VOD servers [2011.01]

H04Q SELECTING (switches, relays, selectors H01H; wireless communication networks H04W) [1, 2009.01]

#### Note(s) [1, 2009.01]

1. This subclass <u>covers</u> :

methods, circuits, or apparatus for establishing selectively a connection between a desired number of stations (normally two), or between a main station and a desired number of substations (normally one) for the purpose of transferring information <u>via</u> this connection after it has been established;

#### • selective calling arrangements over connections already established.

#### 2. In this subclass, the following terms or expressions are used with the meanings indicated:

- "subscriber" is a general term for terminal equipment, e.g. telephone for public use;
- "substation" means a subscriber or monitoring equipment which may connect a single subscriber to a line without choice as to subscriber;
- "satellite" is a kind of exchange the operation of which depends upon control signals received from a supervisory exchange;
- "switching centres" includes exchanges and satellites.

#### Subclass index

SELECTING ARRANGEMENTS	
General; by line; multiplex	
DISPOSITIONS FOR TELECONTROL OR TELEMETRY	
DETAILS	

## 1/00 Details of selecting apparatus or arrangements

- 1/02 Constructional details
- 1/04 Frames or mounting racks for selector switches; Accessories therefor, e.g. frame cover
- 1/06 Cable ducts or mountings specially adapted for exchange installations
- 1/08 Frames or mounting racks for relays; Accessories therefor
- 1/10 • Exchange station construction

1/12	•	Arrangements of multiple bars with or without
1 / 1 4		pivotable frames
1/14	•	Distribution frames
1/16	•	<ul> <li>Wiring arrangements for selector switches or relays in frames</li> </ul>
1/18	•	Electrical details
1/20	•	Testing circuits or apparatus; Circuits or apparatus
		for detecting, indicating, or signalling faults or
		troubles
1/22	•	Automatic arrangements
1/24	•	• • • for connection devices
1/26	•	for signalling trouble in unoccupied sub- exchanges
1/28	•	<ul> <li>Current-supply circuits or arrangements for selection equipment at exchanges</li> </ul>
1/30	•	Signalling arrangements; Manipulation of
		signalling currents (multiplex systems providing
		for calling or supervisory signals H04J 1/14,
1/32		<ul><li>H04J 3/12)</li><li>using trains of dc pulses (H04Q 1/39 takes</li></ul>

5/24	<ul> <li>for two-party-line systems</li> </ul>	
	1 5 5	11/02
		11/04

- 9/00 Arrangements in telecontrol or telemetry systems for selectively calling a substation from a main station, in which substation desired apparatus is selected for applying a control signal thereto or for obtaining measured values therefrom
- /02 Automatically-operated arrangements
- Arrangements for synchronous operation
- Calling by using amplitude or polarity of dc
- /08 Calling by using continuous ac
- 10 • using single different frequencies
- /12 • using combinations of frequencies
- 9/14 Calling by using pulses
- 0/16 • by predetermined number of pulses
- **11/00** Selecting arrangements for multiplex systems (multiplex systems H04J)
- 11/02 for frequency-division multiplexing
- 11/04 for time-division multiplexing
- 11/06 • Time-space-time switching [5]
- 11/08 • Time only switching [5]

# H04R LOUDSPEAKERS, MICROPHONES, GRAMOPHONE PICK-UPS OR LIKE ACOUSTIC ELECTROMECHANICAL TRANSDUCERS; DEAF-AID SETS; PUBLIC ADDRESS SYSTEMS (producing sounds with frequency not determined by supply frequency G10K) [6]

#### Note(s)

- 1. This subclass <u>covers</u>:
  - loudspeakers, microphones, gramophone pick-ups or like transducers producing acoustic waves or variations of electric current or voltage;
  - arrangements actuated by variations of electric current or voltage for cutting grooves in records;
  - circuits for the above-mentioned arrangements;
  - monitoring or testing the above-mentioned equipment.
- 2. Attention is drawn to the Notes following the titles of class B81 and subclass B81B relating to "micro-structural devices" and "microstructural systems".

#### Subclass index

TYPES OF TRANSDUCER	
With magnetic circuit:	
moving coil; moving armature; magnetisable diaphragm; magnetostriction	9/00, 11/00, 13/00, 15/00
piezo-electric; electrostatic; with variable resistance Other types Details	
general; circuits; diaphragms and cones APPLICATIONS	1/00, 3/00, 7/00
Stereophonic arrangements; deaf-aid; public address systems	5/00, 25/00, 27/00
MONITORING, TESTING; MANUFACTURE	29/00, 31/00

1/00 Details of transducers (diaphragms H04R 7/00; characterised by the nature of the transducer, see the relevant group of main groups H04R 9/00-H04R 23/00; mountings specially adapted for telephone equipment H04M 1/02)

- 1/02 Casings; Cabinets; Mountings therein (H04R 1/28 takes precedence)
- 1/04 Structural association of microphone with electric circuitry therefor (in deaf-aid sets H04R 25/00)
- 1/06 Arranging circuit leads; Relieving strain on circuit leads
- 1/08 Mouthpieces; Attachments therefor
- 1/10 Earpieces; Attachments therefor

1/12	• Sanitary or hygienic devices for mouthpieces or earpieces, e.g. for protecting against infection	
1/14	<ul> <li>Throat mountings for microphones</li> </ul>	
1/16	• Mounting or connecting stylus to transducer with without damping means	or
1/18	• • Holders for styli; Mounting holders on transdu	icers
1/20	<ul> <li>Arrangements for obtaining desired frequency or directional characteristics (for stereophonic purpor H04R 5/00)</li> </ul>	oses
1/22	• • for obtaining desired frequency characteristic	only
1/24	<ul> <li>Structural combinations of separate transdu or of parts of the same transducer and responsive respectively to two or more frequency ranges</li> </ul>	cers

1/26	• • • Spatial arrangement of separate transducers
	responsive to two or more frequency ranges
1/28	• • Transducer mountings or enclosures designed
	for specific frequency response; Transducer
	enclosures modified by provision of mechanical or acoustic impedances, e.g. resonator, damping
	means
1/30	<ul> <li>Combinations of transducers with horns, e.g.</li> </ul>
1,00	with mechanical matching means
1/32	• • for obtaining desired directional characteristic
	only
1/34	• • • by using a single transducer with sound
	reflecting, diffracting, directing or guiding
1/36	<ul><li>means</li><li>• • • by using a single aperture of dimensions not</li></ul>
1/30	greater than the shortest operating
	wavelength
1/38	• • • in which sound waves act upon both sides of
	a diaphragm and incorporating acoustic
	phase-shifting means, e.g. pressure-gradient
1/40	<ul><li>microphone</li><li>• • by combining a number of identical transducers</li></ul>
1/40	<ul> <li>Combinations of transducers with fluid-pressure or</li> </ul>
1/ 42	other non-electrical amplifying means
1/44	Special adaptations for subaqueous use, e.g. for
	hydrophone
1/46	Special adaptations for use as contact microphones,
	e.g. on musical instrument, on stethoscope (throat
	mountings H04R 1/14)
3/00	Circuits for transducers (arrangements for producing a
	reverberation or echo sound G10K 15/08; amplifiers
	H03F)
3/02	for preventing acoustic reaction
3/04	for correcting frequency response
3/06	of electrostatic transducers

1//00	<ul> <li>signals being recorded or played-back by vibration of a stylus in two orthogonal directions</li> </ul>
	simultaneously
17/10	Resonant transducers, i.e. adapted to produce
	maximum output at a predetermined frequency
10 / 60	
<b>19/00</b>	Electrostatic transducers
19/01	characterised by the use of electrets [3]
19/02	<ul> <li>Loudspeakers (H04R 19/01 takes precedence) [3]</li> </ul>

#### H04R

19/04	• Microphones (H04R 19/01 takes precedence) [3]	23/0
19/06	Gramophone pick-ups using a stylus; Recorders	
	using a stylus (H04R 19/01 takes precedence) [3]	23/02
19/08	<ul> <li>comprising two or more styli or transducers (H04R 19/10 takes precedence)</li> </ul>	
19/10	<ul> <li>signals being recorded or played-back by vibration</li> </ul>	25/0
10/10	of a stylus in two orthogonal directions	25/02
	simultaneously	25/04
21/00	Variable-resistance transducers (gaseous-resistance	27/0
	transducers H04R 23/00; magneto-resistive transducers	
	H04R 23/00)	27/02
21/02	Microphones	27/04
21/04	<ul> <li>Gramophone pick-ups using a stylus; Recorders</li> </ul>	
	using a stylus	29/00
		31/0

#### 23/00 Transducers other than those covered by groups H04R 9/00-H04R 21/00

3/02 • Transducers using more than one principle simultaneously

#### 25/00 Deaf-aid sets

- 5/02 adapted to be supported entirely by ear
  - comprising pocket amplifiers
- **27/00 Public address systems** (circuits for preventing acoustic reaction H04R 3/02)
  - 7/02 Amplifying systems for the deaf
- 7/04 Electric megaphones
- 29/00 Monitoring arrangements; Testing arrangements
- 31/00 Apparatus or processes specially adapted for the manufacture of transducers or diaphragms therefor
- H04S STEREOPHONIC SYSTEMS (information storage on discs or tapes G11B; broadcast systems for the distribution of stereophonic information H04H 20/88; multiplex systems in general H04J) [3]

#### Note(s)

- In this subclass, the following expression is used with the meaning indicated: • "stereophonic systems" covers quadraphonic or similar systems.
  - **1/00 Two-channel systems** (H04S 5/00, H04S 7/00 take precedence) **[3]**
  - 3/00 Systems employing more than two channels, e.g. quadraphonic (H04S 5/00, H04S 7/00 take precedence) [3]
  - 3/02 of the matrix type, i.e. in which input signals are combined algebraically, e.g. after having been phase shifted with respect to each other **[3]**
- 5/00 Pseudo-stereo systems, e.g. in which additional channel signals are derived from monophonic signals by means of phase shifting, time delay or reverberation (arrangements for producing a reverberation or echo sound G10K 15/08) [3]
- 5/02 of the pseudo four-channel type, e.g. in which rear channel signals are derived from two-channel stereo signals [3]
- 7/00 Indicating arrangements; Control arrangements, e.g. balance control [3]

#### H04W WIRELESS COMMUNICATION NETWORKS [2009.01]

#### Note(s) [2009.01]

- 1. This subclass <u>covers</u>:
  - communication networks for selectively establishing one or a plurality of wireless communication links between a desired number of users or between users and network equipment, for the purpose of transferring information via these wireless communication links;
  - networks deploying an infrastructure for mobility management of wireless users connected thereto, e.g. cellular networks, WLAN [Wireless Local Area Network], wireless access networks, e.g. WLL [Wireless Local Loop] or self-organising wireless communication networks, e.g. ad hoc networks;
  - planning or deployment specially adapted for the above-mentioned wireless networks;
  - services or facilities specially adapted for the above-mentioned wireless networks;
  - arrangements or techniques specially adapted for the operation of the above-mentioned wireless networks.
- 2. This subclass <u>does not cover</u>:
  - communication systems using wireless extensions, i.e. wireless links without selective communication, e.g. cordless telephones, which are covered by group H04M 1/72;
    - broadcast communication, which is covered by subclass H04H.
  - In this subclass, at each hierarchical level, in the absence of an indication to the contrary, classification is made in the first appropriate place.

### 4/00 Services or facilities specially adapted for wireless communication networks [2009.01]

- 4/02 Services making use of the location of users or terminals [2009.01]
- 4/04 in a dedicated environment, e.g. buildings or vehicles [2009.01]
- 4/06 Selective distribution of broadcast; Services to user groups; One-way selective calling services [2009.01]
   4/08 Lion group management [2009.01]
- 4/08 • User group management **[2009.01]**

3.

4/10	• Push-to-Talk or Push-on-Call services [2009.01]
4/12	<ul> <li>Messaging, e.g. SMS [Short Messaging Service]; Mailboxes; Announcements, e.g. informing users on</li> </ul>
	the status or progress of a communication
	request [2009.01]
4/14	Short messaging services, e.g. SMS or USSD
	[Unstructured Supplementary Service Data] [2009.01]
4/16	Communication-related supplementary services, e.g.
4/10	call-transfer or call-hold <b>[2009.01]</b>
4/18	• Information format or content conversion, e.g.
	adaptation by the network of the transmitted or received information for the purpose of wireless
	delivery to users or terminals <b>[2009.01]</b>
4/20	• Auxiliary data signalling, i.e. transmitting data via a
	non-traffic channel [2009.01]
4/22	Emergency connection handling [2009.01]
4/24 4/26	<ul> <li>Accounting or billing [2009.01]</li> <li>Usage measurement [2009.01]</li> </ul>
4/20	
8/00	Network data management [2009.01]
8/02	• Processing of mobility data, e.g. registration information at HLR [Home Location Register] or
	VLR [Visitor Location Register]; Transfer of
	mobility data, e.g. between HLR, VLR or external
0.10.4	networks <b>[2009.01]</b>
8/04	Registration at HLR or HSS [Home Subscriber Server] [2009.01]
8/06	Registration at serving network Location Register,
	VLR or user mobility server [2009.01]
8/08	Mobility data transfer [2009.01]
8/10	• • • between location register and external networks [2009.01]
8/12	<ul> <li>• • between location registers or mobility</li> </ul>
	servers [2009.01]
8/14	• • • between corresponding nodes [2009.01]
8/16	• • selectively restricting mobility tracking [2009.01]
8/18	<ul> <li>Processing of user or subscriber data, e.g. subscribed</li> </ul>
	services, user preferences or user profiles; Transfer of
0.000	user or subscriber data [2009.01]
8/20 8/22	<ul> <li>Transfer of user or subscriber data [2009.01]</li> <li>Processing or transfer of terminal data, e.g. status or</li> </ul>
0/22	physical capabilities [2009.01]
8/24	Transfer of terminal data [2009.01]
8/26	<ul> <li>Network addressing or numbering for mobility support [2009.01]</li> </ul>
8/28	• • Number portability <b>[2009.01]</b>
8/30	Network data restoration [2009.01]
17/00	
12/00	Security arrangements, e.g. access security or fraud detection; Authentication, e.g. verifying user identity
	or authorisation; Protecting privacy or
	anonymity [2009.01]
12/02	Protecting privacy or anonymity [2009.01]
12/04 12/06	<ul><li>Key management [2009.01]</li><li>Authentication [2009.01]</li></ul>
12/08	Access security [2009.01]
12/10	• Integrity [2009.01]
12/12	• Fraud detection [2009.01]
16/00	Network planning, e.g. coverage or traffic planning
10/00	tools; Network deployment, e.g. resource partitioning
	or cell structures [2009.01]
16/02	• Resource partitioning among network components,
	e.g. reuse partitioning <b>[2009.01]</b>

16/04	•	•	Traffic adaptive resource partitioning [2009.01]	
-------	---	---	--	--

16/06	•••	Hybrid resource partitioning, e.g. channel
		borrowing [2009.01]
16/08	•••	
16/10	•••	
16/12	•••	
16/14		Spectrum sharing arrangements [2009.01]
16/16	• •	for i Do [i fiftate Dabe blatton]
10/10		arrangements [2009.01]

#### H04W

36/18	•	• for allowing seamless reselection, e.g. soft
		reselection [2009.01]
36/20	•	• for optimising the interference level <b>[2009.01]</b>
36/22	•	• for handling the traffic <b>[2009.01]</b>
36/24	•	Reselection being triggered by specific parameters <b>[2009.01]</b>
36/26	•	<ul> <li>by agreed or negotiated communication parameters [2009.01]</li> </ul>
36/28	•	• involving a plurality of connections, e.g. multi- call or multi-bearer connections [2009.01]
36/30	•	<ul> <li>by measured or perceived connection quality data [2009.01]</li> </ul>
36/32	•	<ul> <li>by location or mobility data, e.g. speed data [2009.01]</li> </ul>
36/34	•	Reselection control [2009.01]
36/36	•	• by user or terminal equipment <b>[2009.01]</b>
36/38	•	• by fixed network equipment [2009.01]
40/00		ommunication routing or communication path nding [2009.01]
40/02	•	Communication route or path selection, e.g. power-
		based or shortest path routing [2009.01]
40/04	•	<ul> <li>based on wireless node resources [2009.01]</li> </ul>
40/06	•	<ul> <li>based on characteristics of available antennas [2009.01]</li> </ul>
40/08	•	<ul> <li>based on transmission power [2009.01]</li> </ul>
40/10	•	• • based on available power or energy [2009.01]
40/12	•	<ul> <li>based on transmission quality or channel quality [2009.01]</li> </ul>
40/14	•	• • based on stability <b>[2009.01]</b>
40/16	•	<ul> <li>based on interference [2009.01]</li> </ul>
40/18	•	based on predicted events [2009.01]
40/20	•	<ul> <li>based on geographic position or location [2009.01]</li> </ul>
40/22	•	• using selective relaying for reaching a BTS [Base Transceiver Station] or an access point <b>[2009.01]</b>
40/24	•	Connectivity information management, e.g. connectivity discovery or connectivity
10 / 0.0		update <b>[2009.01]</b>
40/26	•	<ul> <li>for hybrid routing by combining proactive and reactive routing [2009.01]</li> </ul>
40/28	•	<ul> <li>for reactive routing [2009.01]</li> </ul>
40/30	•	• for proactive routing [2009.01]
40/32	•	<ul> <li>for defining a routing cluster membership [2009.01]</li> </ul>
40/34	•	Modification of an existing route <b>[2009.01]</b>
40/36	•	• due to handover [2009.01]
40/38	•	<ul> <li>adapting due to varying relative distances between nodes [2009.01]</li> </ul>
48/00		ccess restriction; Network selection; Access point lection [2009.01]
48/02	•	Access restriction performed under specific conditions [2009.01]
48/04	•	<ul> <li>based on user or terminal location or mobility data, e.g. moving direction or speed [2009.01]</li> </ul>
48/06	•	<ul> <li>based on traffic conditions [2009.01]</li> </ul>
48/08	•	Access restriction or access information delivery, e.g. discovery data delivery <b>[2009.01]</b>
48/10	•	• using broadcasted information [2009.01]
48/12	•	• using downlink control channel [2009.01]
48/14	•	• using user query [2009.01]
48/16	•	Discovering; Processing access restriction or access information [2009.01]
48/18	•	Selecting a network or a communication service <b>[2009.01]</b>
48/20	•	Selecting an access point [2009.01]

52/00	Power management, e.g. TPC [Transmission Power Control], power saving or power classes [2009.01]
52/02	Power saving arrangements [2009.01]
52/04	• TPC [Transmission power control] [2009.01]
52/06	• • TPC algorithms <b>[2009.01]</b>
52/08	• • • Closed loop power control <b>[2009.01]</b>
52/10	<ul> <li>Open loop power control [2009.01]</li> </ul>
52/12	<ul> <li>Outer and inner loops [2009.01]</li> </ul>
52/12	<ul> <li>Separate analysis of uplink or</li> </ul>
	downlink <b>[2009.01]</b>
52/16	• • Deriving transmission power values from another channel [2009.01]
52/18	TPC being performed according to specific parameters [2009.01]
52/20	• • • using error rate [2009.01]
52/22	<ul> <li>• taking into account previous information or commands [2009.01]</li> </ul>
52/24	• • using SIR [Signal to Interference Ratio] or other wireless path parameters [2009.01]
52/26	• • • using transmission rate or quality of service
FD / 20	QoS [Quality of Service] [2009.01]
52/28	<ul> <li>using user profile, e.g. mobile speed, priority or network state, e.g. standby, idle or non- transmission [2009.01]</li> </ul>
52/30	<ul> <li>using constraints in the total amount of available transmission power [2009.01]</li> </ul>
52/32	<ul> <li>• • TPC of broadcast or control channels [2009.01]</li> </ul>
52/34	• • • TPC management, i.e. sharing limited amount of power among users or channels or data
52/36	<ul> <li>types, e.g. cell loading [2009.01]</li> <li>with a discrete range or set of values, e.g. step size, ramping or offsets [2009.01]</li> </ul>
52/38	<ul> <li>TPC being performed in particular situations [2009.01]</li> </ul>
52/40	<ul> <li>• • during macro-diversity or soft handoff [2009.01]</li> </ul>
52/42	• • • in systems with time, space, frequency or
52/44	<ul> <li>polarisation diversity [2009.01]</li> <li>in connection with interruption of</li> </ul>
52/46	<ul> <li>transmission [2009.01]</li> <li>in multi-hop networks, e.g. wireless relay networks [2009.01]</li> </ul>
52/48	• • • during retransmission after error or non-
52/50	<ul> <li>acknowledgment [2009.01]</li> <li>at the moment of starting communication in a</li> </ul>
52/52	<ul> <li>multiple access environment [2009.01]</li> <li>using AGC [Automatic Gain Control] circuits or</li> </ul>
52/54	<ul><li>amplifiers [2009.01]</li><li>Signalisation aspects of the TPC commands, e.g.</li></ul>
	frame structure [2009.01]
52/56	• • • Detection of errors of TPC bits [2009.01]
52/58	• • • Format of the TPC bits <b>[2009.01]</b>
52/60	• • • using different transmission rates for TPC commands [2009.01]
56/00	Synchronisation arrangements [2009.01]
60/00	Registration, e.g. affiliation to network; De- registration, e.g. terminating affiliation [2009.01]
60/02	<ul> <li>by periodical registration [2009.01]</li> </ul>
60/02 60/04	<ul> <li>using triggered events [2009.01]</li> </ul>
60/04 60/06	<ul> <li>De-registration or detaching [2009.01]</li> </ul>
00/00	
64/00	Locating users or terminals for network management purposes, e.g. mobility management [2009.01]

68/00	Notification of users, e.g. alerting for incoming communication or change of service [2009.01]
68/02	Arrangements for increasing efficiency of notification or paging channel [2009.01]
68/04	<ul> <li>multi-step notification using statistical or historical mobility data [2009.01]</li> </ul>
68/06	<ul> <li>using multi-step notification by changing the notification area [2009.01]</li> </ul>
68/08	<ul> <li>using multi-step notification by increasing the notification area [2009.01]</li> </ul>
68/10	<ul> <li>using simulcast notification [2009.01]</li> </ul>
68/12	Inter-network notification [2009.01]
72/00	Local resource management, e.g. selection or
	allocation of wireless resources or wireless traffic
	scheduling [2009.01]
72/02	<ul> <li>Selection of wireless resources by user or terminal [2009.01]</li> </ul>
72/04	<ul> <li>Wireless resource allocation [2009.01]</li> </ul>
72/06	<ul> <li>based on ranking criteria of the wireless resources [2009.01]</li> </ul>
72/08	• • based on quality criteria [2009.01]
72/10	• • based on priority criteria [2009.01]
72/12	Wireless traffic scheduling [2009.01]
72/14	• • using a grant channel [2009.01]
74/00	Wireless channel access, e.g. scheduled or random access [2009.01]
74/02	Hybrid access techniques [2009.01]
74/04	Scheduled access [2009.01]
74/06	• • using polling <b>[2009.01]</b>
74/08	• Non-scheduled access, e.g. random access, ALOHA or CSMA [Carrier Sense Multiple Access] [2009.01]
76/00	Connection management, e.g. connection set-up, manipulation or release [2009.01]
76/02	Connection set-up [2009.01]
76/04	Connection manipulation [2009.01]
76/06	Connection release [2009.01]
80/00	Wireless network protocols or protocol adaptations to wireless operation, e.g. WAP [Wireless Application Protocol] [2009.01]
80/02	Data link layer protocols [2009.01]
80/04	<ul> <li>Network layer protocols, e.g. mobile IP [Internet Protocol] [2009.01]</li> </ul>
80/06	<ul> <li>Transport layer protocols, e.g. TCP [Transport Control Protocol] over wireless [2009.01]</li> </ul>
80/08	Upper layer protocols [2009.01]
80/10	• • adapted for session management, e.g. SIP [Session Initiation Protocol] [2009.01]
80/12	• • Application layer protocols, e.g. WAP [2009.01]
84/00	Network topologies [2009.01]
84/02	<ul> <li>Hierarchically pre-organised networks, e.g. paging networks, cellular networks, WLAN [Wireless Local Area Network] or WLL [Wireless Local Loop] [2009.01]</li> </ul>

84/04	•	<ul> <li>Large scale networks; Deep hierarchical networks [2009.01]</li> </ul>
84/06	•	Airborne or Satellite Networks [2009.01]
84/08	•	<ul> <li>Trunked mobile radio systems [2009.01]</li> </ul>
84/10		Small scale networks; Flat hierarchical
04/10		networks [2009.01]
84/12	•	• WLAN [Wireless Local Area
04/14		Networks] [2009.01]
84/14	•	WLL [Wireless Local Loop]; RLL [Radio Local Loop] [2009.01]
84/16	•	WPBX [Wireless Private Branch Exchange] [2009.01]
84/18	•	Self-organising networks, e.g. <u>ad hoc</u> networks or
		sensor networks [2009.01]
84/20	•	Master-slave arrangements [2009.01]
84/22	•	• with access to wired networks [2009.01]
88/00	D	evices specially adapted for wireless
		mmunication networks, e.g. terminals, base
	st	ations or access point devices [2009.01]
88/02	•	Terminal devices [2009.01]
88/04	•	<ul> <li>adapted for relaying to or from another terminal or user [2009.01]</li> </ul>
88/06	•	• adapted for operation in multiple networks, e.g.
		multi-mode terminals [2009.01]
88/08	•	Access point devices [2009.01]
88/10	•	• adapted for operation in multiple networks, e.g. multi-mode access points [2009.01]
88/12	•	Access point controller devices <b>[2009.01]</b>
88/14	•	Backbone network devices <b>[2009.01]</b>
88/16	•	Gateway arrangements [2009.01]
88/18	•	Service support; Network management
		devices [2009.01]
92/00		terfaces specially adapted for wireless
00 (00		mmunication networks [2009.01]
92/02	•	Inter-networking arrangements <b>[2009.01]</b>
92/04	•	Interfaces between hierarchically different network devices <b>[2009.01]</b>
92/06	•	<ul> <li>between gateways and public network devices [2009.01]</li> </ul>
92/08	•	• between user and terminal device [2009.01]
92/10	•	• between terminal device and access point, i.e.
		wireless air interface [2009.01]
92/12	•	<ul> <li>between access points and access point controllers [2009.01]</li> </ul>
92/14	•	<ul> <li>between access point controllers and backbone network device [2009.01]</li> </ul>
92/16	•	Interfaces between hierarchically similar devices [2009.01]
92/18	•	<ul> <li>between terminal devices [2009.01]</li> </ul>
92/20	•	<ul> <li>between access points [2009.01]</li> </ul>
92/22	•	<ul> <li>between access point controllers [2009.01]</li> </ul>
92/24	•	<ul> <li>between backbone network devices [2009.01]</li> </ul>
99/00		ıbject matter not provided for in other groups of is subclass [2009.01]
