

Avv. Serena Corbellini

Phd Intellectual property and competition law

In my opinion it's possible to find a solution to this matter even with the existing rules. I think it's not correct the assumption that an AI creation could be publicly available. Every creation needs a creative efforts (economical and/or physical) and that effort must be recognized with moral and economic rights, if it would not be so it will be as a discouragement for creativity work. I think that the solution could be similar to the one with invention/creation in a working relationship: distribution between moral and economical rights. In my opinion an AI creator can't become a stranger for the creation/invention of the AI that he or she creates.
