Action Plan for Utilization of AI Technology (Rev.2024)

What's NEW!!

(※) The initiatives of each project are rough assumptions and may change in the future depending on the progress, budget conditions, and other various circumstances.

Patent Classification & Prior Art Search①

- Transitioned to **agile development phase**.

Prior Art Search②

- PoC will be conducted in FY2024, study on **“Developing AI-Based Patent Classification”** has launched.

Application of Generative AI to JPO administrative work

- Planning and PoC will be conducted in FY2024, paying attention to changes in technological trends due to rapid evolution and government policies on handling of **generative AI**.

Reclassification

Efficient Patent Classification System

AI Utilization

FI coverage

CC00 CONTROL PURPOSE

DA00 CONTROL INPUT SIGNAL

DA01 . Steering condition

DA02 . Front wheel steering angle

DA03 . . . Steering angle of wheel

DA04 . . . Steering angle of tyre

DA05 . . . Displacement of tie rod in the axial direction

DA06 . . Rear wheel steering angle including angular velocity of front wheels

DA08 . . Steering angular velocity of front wheels

DA09 . . . Steering angular velocity of steering wheels

DA10 . . . Steering angular velocity of tyre

DA12 . . Steering angular acceleration of front wheels

Steering angular acceleration of steering wheels

Steering angular acceleration of tyres

Patent Classification by Machine Learning (for foreign patent documents)

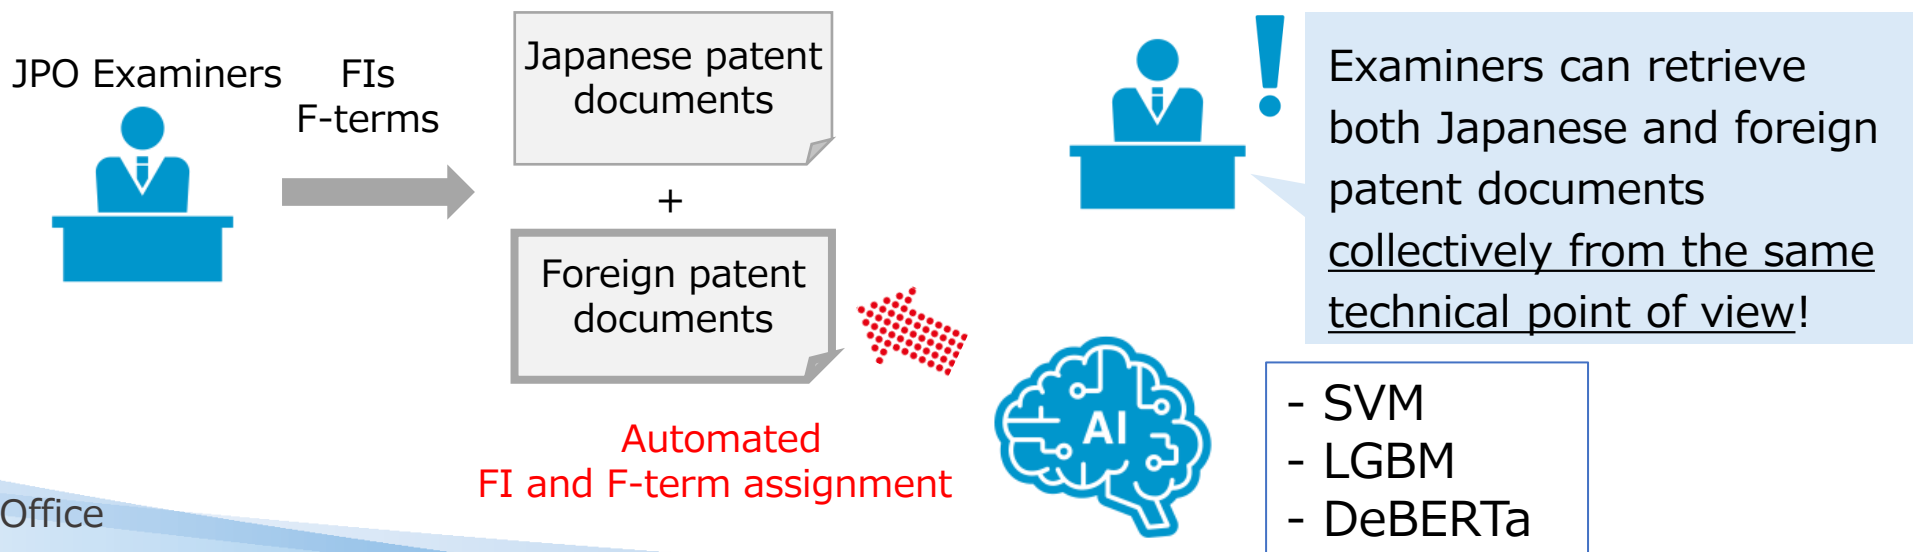

#Patent Classification,
#Agile Development Phase

Patent classification(for foreign patent documents)

Main Points

Issue: JPO examiners couldn't use FIs and F-terms (JPO-specific search indexes) to retrieve foreign patent documents though they are useful to retrieve relevant documents to Japanese applications.

Solution: Assigning FIs and F-terms to foreign patent documents automatically, JPO examiners can conduct collective search on Japanese and foreign documents with the indexes.

Method for Patent Classification by Machine Learning(1)

We use **F-value**, a common metric for evaluating machine learning models, for Patent Classification.

$$\text{Recall} : \frac{\text{Correct}(7)}{\text{Correct}(7)+\text{Missed}(3)} = \frac{7}{10} = \mathbf{0.7}$$

Classification allotted by AI(12)

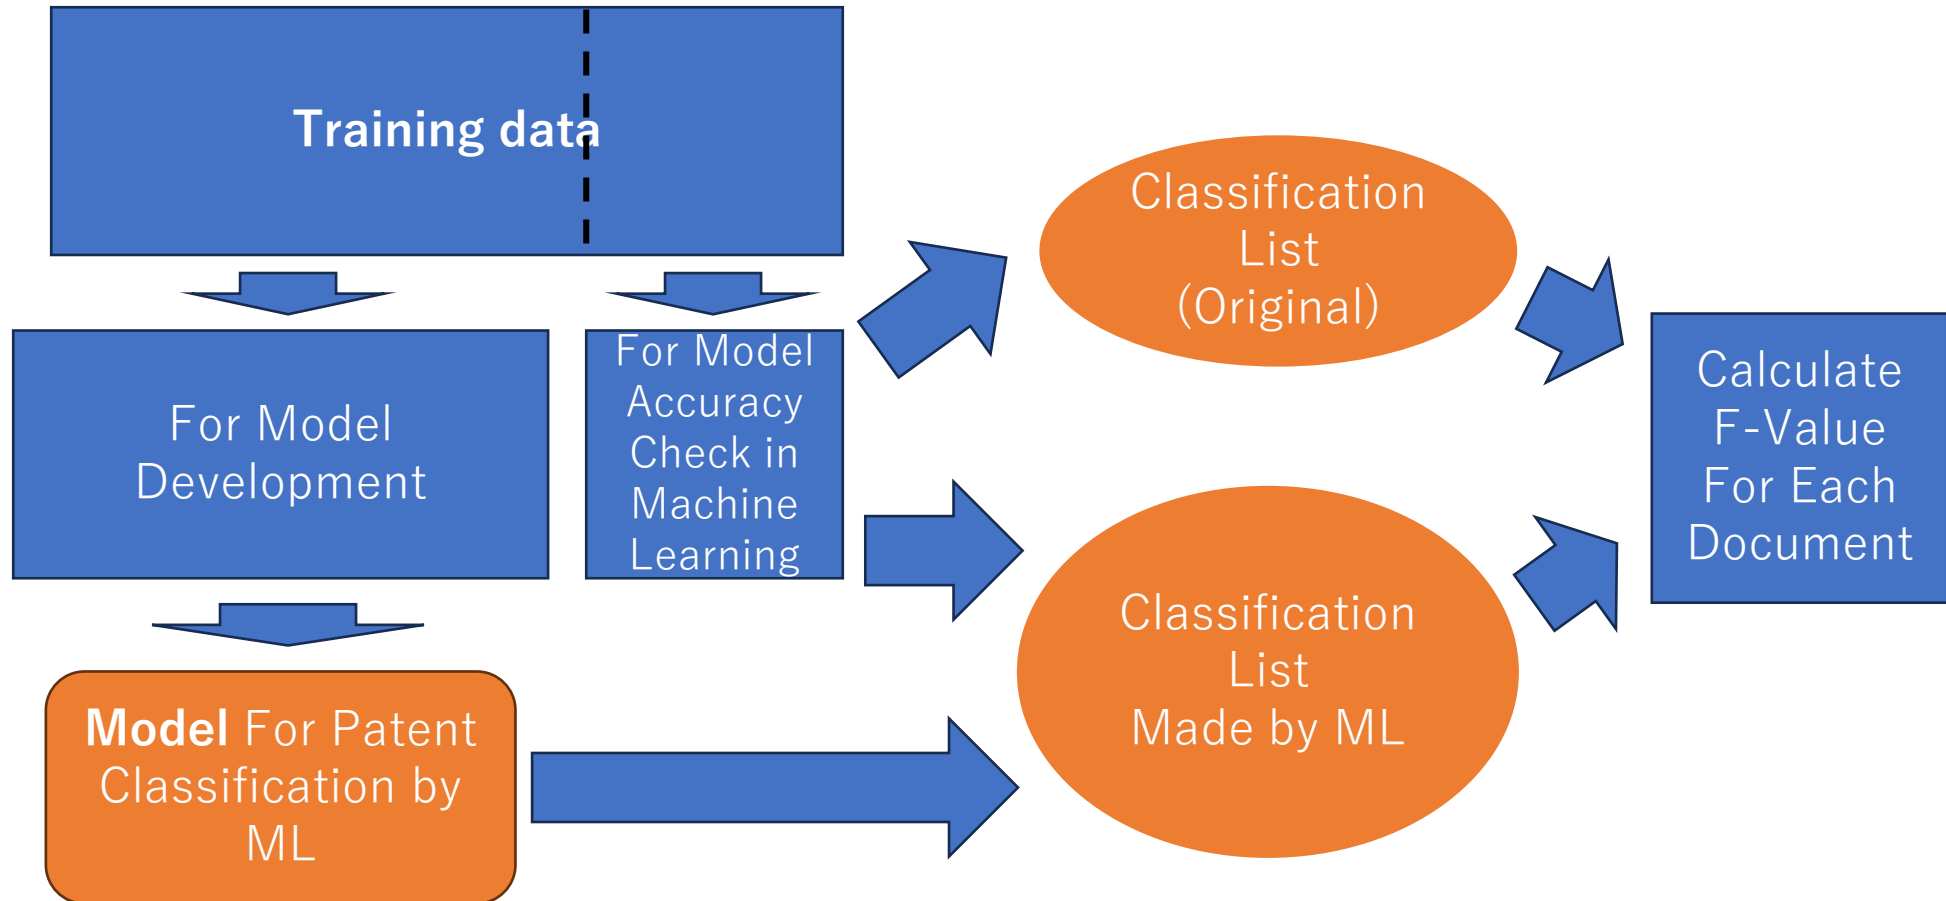

Classification should be allotted(10)

$$\text{Precision} : \frac{\text{Correct}(7)}{\text{Correct}(7)+\text{Noise}(5)} = \frac{7}{12} = \mathbf{0.58}$$

$$\text{F-value} = \frac{2 \times \text{Recall} \times \text{Precision}}{\text{Recall} + \text{Precision}} = \frac{2 \times 0.7 \times 0.58}{0.7 + 0.58} = \mathbf{0.63}$$

Method for Patent Classification by Machine Learning(2)

Decide whether allot certain classification to a document or not, by using SVM, LGBM, DeBERTa).

We need **Standard Criteria of AI Classification**
with Same Metrics, Same Training Data.

Developing AI-based Patent Classification

#Prior Art Search ②

#PoC

#commissioned study

Developing AI-based Patent Classification

Main Points

Issue:

- Developing patent classification has (1) "Creating Classification" and (2) "Assigning Classification". The both are usually Human-based but it needs a lot of Time & Cost.
- Machinery classification is only for "Assigning Classification" and some classification is not suitable for AI.

Solution:

- Using AI to create new patent classifications automatically.
 - Training AI model from patent documents and Create new Classification automatically.
 - Label Classification by same AI model.

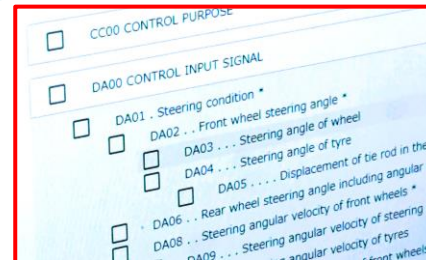

Patent Documents in one Theme.

Unsupervised Training
&
Creating New Classification

Assigning Classification

Label A: Purpose is Stability
Label B: Input signal is Steering
Label C: Control by Electric motor
...

Label A: Purpose is Response
Label B: Control by Electric motor
Label C: using Gyro Sensor
...

Thank you!
Merci!
