IP DATA EXCHANGE STANDARDS FOR IMPROVED COMMUNICATION BETWEEN IP STAKEHOLDERS

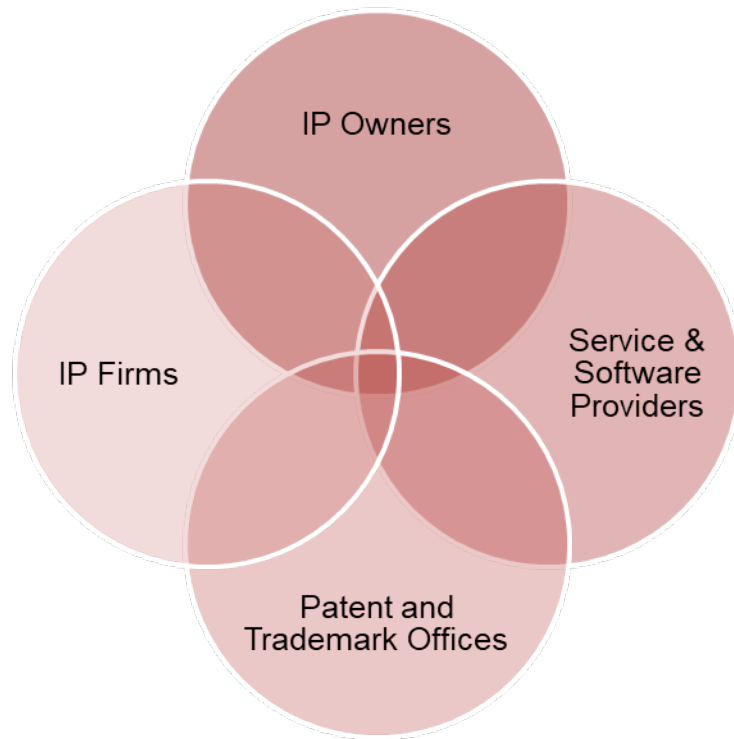

NF X50-276 Standard and first implementations

A vision based on standardization

IP managers need efficient tools
to exchange and process IP data

Data exchange standards allow to **interact
with other players more efficiently**

AFNOR standard NF X50-276

A standard developed
by IP professionals
for the **IP community**

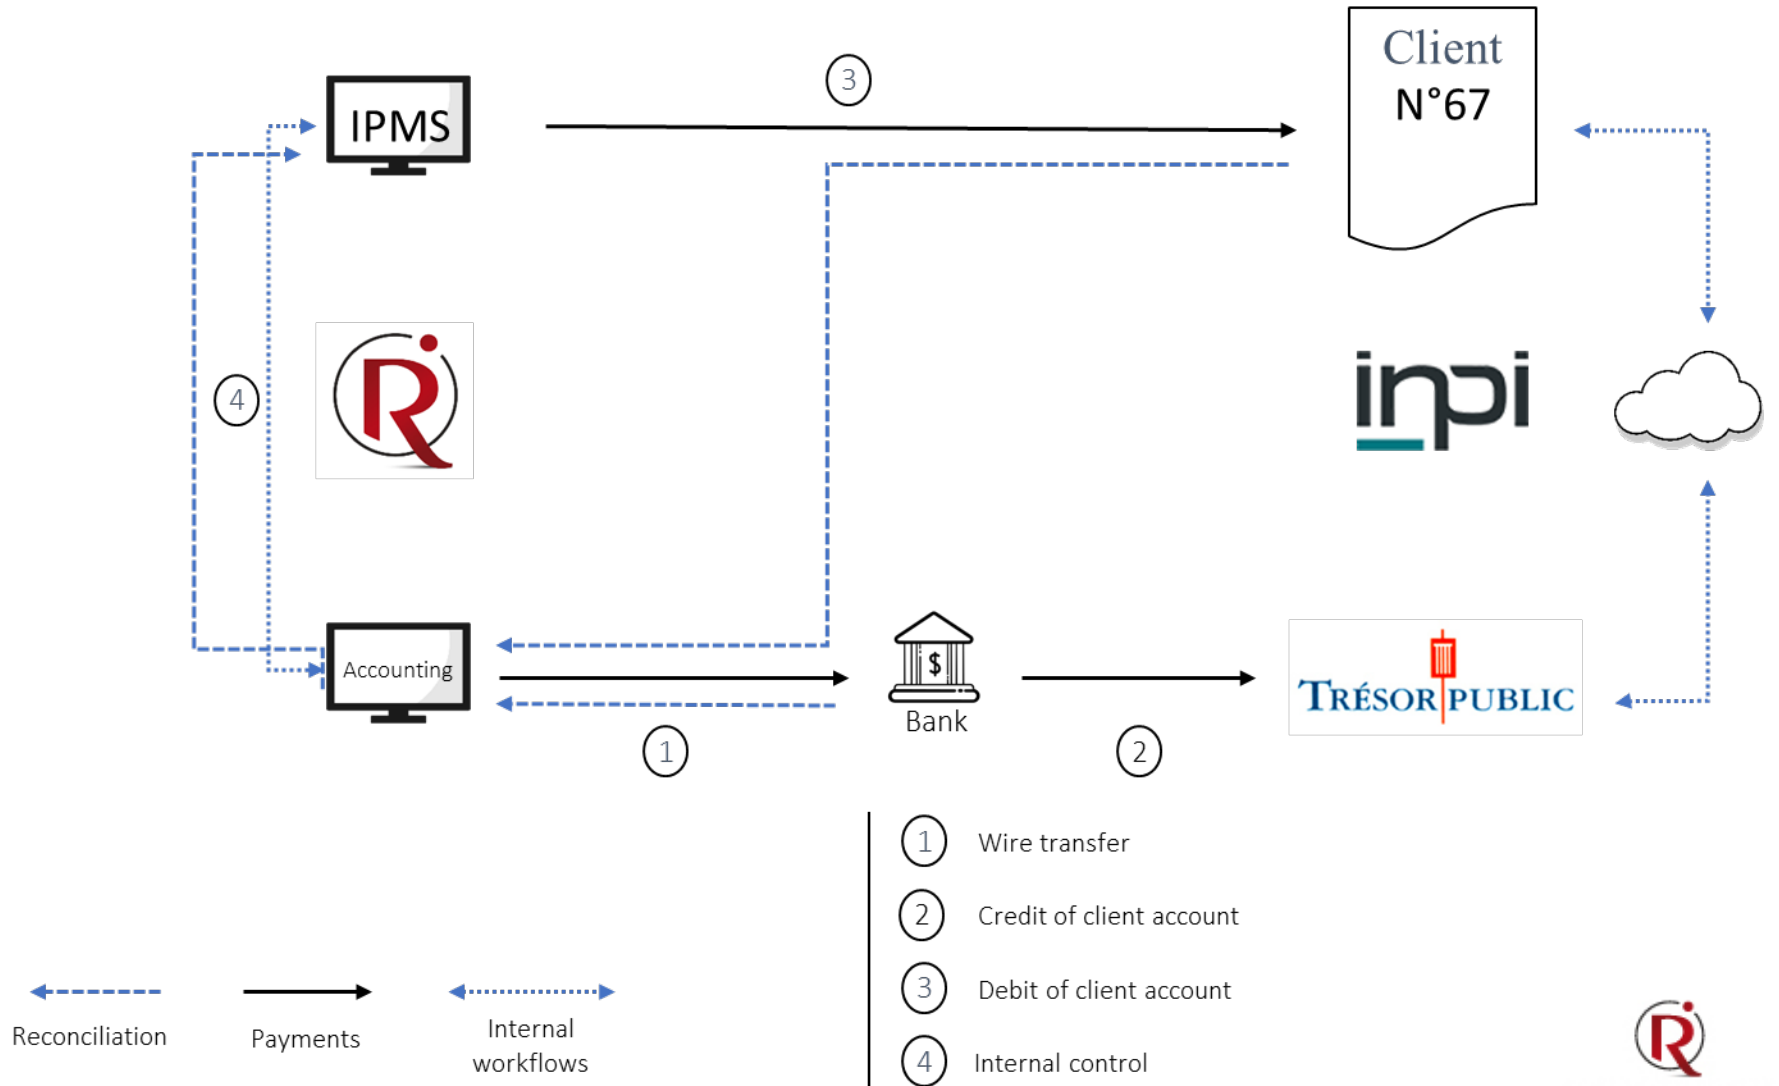

afnor
GRUPE

The example of payment processes

Current means and channels of payment are disconnected from IP rights management workflows

And thus compromise IP Rights and takes too much time and resources

Official fees payment

Payment at risk

No control on payment deadlines
IP rights at risk

Complexity of cash management
Complexity and costs of reconciliations

Standardisation benefits

A comprehensive data flow including the IP rights data, the purpose of payment (event = payment of issue fees) and the wire transfer data

Automatization of reconciliation between IPMS, accounting and Banking systems

Benefits of instant payment (internal auditing, risks, synchronization of IP and accounting tasks, cash management)

Innovative payment tool for IP

POC framework : Payment related to a Communication between IP stakeholders on a peer-to-peer network

IP business

- Digitalize our business process
- Compliant with IP data exchange standard (NF X50-276)
- Business and payment reconciliation by design

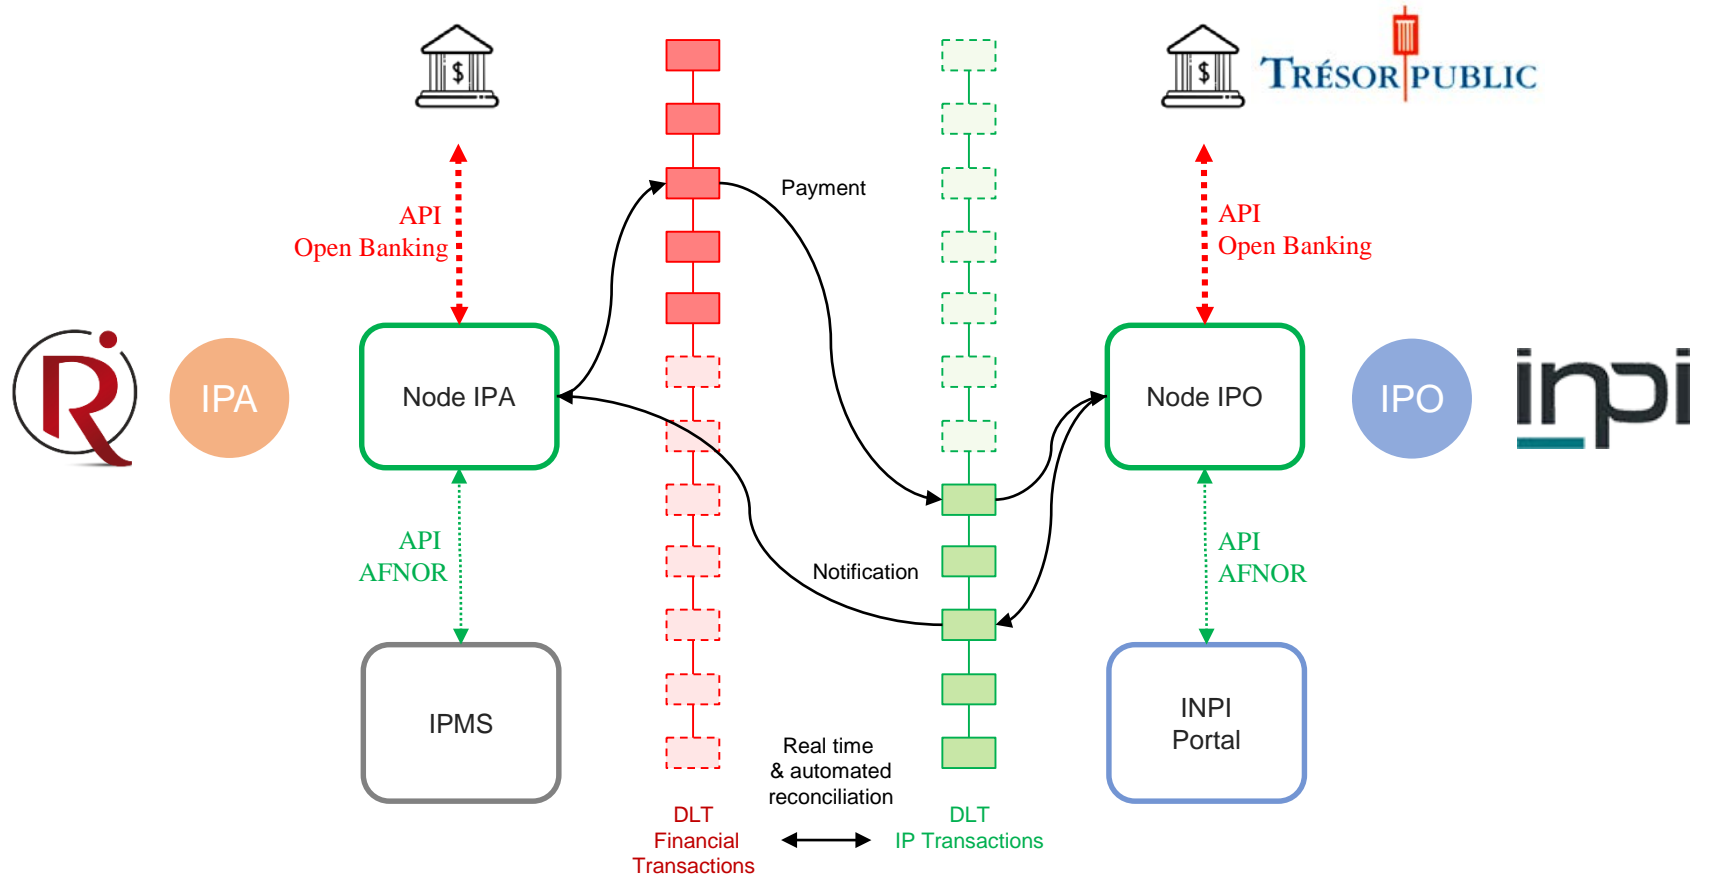

Banking regulation

- Compliant with banking regulation
- Real-time and frictionless transaction

IT architecture

- Neutral, open, secure and scalable digital environment
- Token-based business transactions (DLT mode)

A unique dataflow for Finance and IP

Other use cases

The Afnor standard covers
any type of standard interaction
among the IP community

Work in progress

IP data exchange standards

Software provider examples

OrdiPat

New TM application at the French patent and trademark office

Use cases for large IP owners
