## **Modern Synthesis**

Modern Synthesis is a London-based biotech company crafting the next generation of material with biology. The company's microbial textile platform combines a natural yarn scaffold with microbial cellulose to create lightweight composite materials. The initial products are alternative leather-like materials for the fashion industry—initially high-end sportswear.

Core technologies: • 2D yarn scaffold creation • “Biofabrication” of a bacterial cellulose film around this scaffold • Processing and finishing this product into a performance textile. The product is TRL4.

### **Säntis Textiles Pte Ltd**

Säntis Textiles Pte Ltd developed the RCO100, which is a fabric made 100% of pure recycled Cotton. RCO100 uses pre-and post- consumer cotton, textile waste, and leftovers from fabric production. The unique factor of RCO100 is the mecha recycled spinning process; creating 100% recycled cotton yarn without using any blends. The process uses no bleaching, no regenerating, and no chemicals. RCO100 comes as finished fabrics or can be sold directly as yarns. RCO100 originates from nothing but waste. The company uses pre-consumer cotton waste from apparel, home furnishing, and bed-linen industries. Today the company's technology allows Säntis to gradually blend in post-consumer waste, which helps save and reuse what would otherwise be discarded to be burned or dumped in landfills.
