I. OVERVIEW

1. The Intergovernmental Committee on Intellectual Property and Genetic Resources, Traditional Knowledge and Folklore (“the Committee”) has developed several defensive protection mechanisms that aim to enhance the recognition of traditional knowledge (TK) within the patent system, and thus to reduce the practical likelihood that patents will be allowed that incorrectly claim inventions that make use of TK and genetic resources. These are outlined fully in documents WIPO/GRTKF/IC/5/6 and WIPO/GRTKF/IC/6/8.

2. It is now widely understood that defensive protection measures should not be undertaken in isolation, nor without prior informed consent of concerned TK holders, especially since it can entail publication or further dissemination of TK to the detriment of TK holders. In particular, holders of TK should not disclose their TK to third parties or to undertake or consent to its documentation or publication without fully considering the implications and possible damage to their interests. At the same time, some TK is already disclosed, and is available and accessible. There is increasing interest in ensuring that patent authorities take greater account of this disclosed TK during search and examination relating to the validity of patent applications. With this background, the Committee decided at its sixth session to build on its existing work and to develop draft recommendations for patent authorities.
3. In line with the decisions of the Committee, a questionnaire (WIPO/GRTKF/IC/Q.5) has been circulated to collect relevant information that would assist in future work, and in particular the development of recommendations. The present document reports on the background to the issue and provides a possible structure for the proposed recommendations for consideration by the Committee. For ease of reference, questionnaire WIPO/GRTKF/IC/Q.5 is also annexed to this document. An update on responses to the questionnaire will be provided as an addendum to this document.

II. INTRODUCTION

4. Among the needs expressed by TK holders consulted by WIPO during fact-finding missions in 1998 and 1999 were “an analysis of how prior art is established for purposes of patent examinations in the context of TK” and “the prevention of the unauthorized acquisition of IPRs (particularly patents) over TK by documenting and publishing TK as searchable prior art, where so desired by the relevant TK holders.” The Committee has initiated and overseen several developments concerning the recognition of TK within the patent system. These have focussed on defensive protection – that is, measures aimed at preventing the acquisition of intellectual property (IP) rights over TK or genetic resources by parties other than the customary custodians of the knowledge or resources. An overview of defensive protection measures produced by the Committee is contained in Annex I of document WIPO/GRTKF/IC/5/6, and a further update and clarification is provided in document WIPO/GRTKF/IC/6/8. These include developments within the Patent Cooperation Treaty system and the International Patent Classification to take greater account of TK.

5. It has been frequently stressed in the Committee’s work that defensive protection undertaken in isolation may be counterproductive. In some scenarios, defensive protection may actually undermine the interests of TK holders, particularly when it involves giving the public access to TK, which is otherwise undisclosed, secret or inaccessible. In the absence of positive rights that enable TK holders to prevent unauthorized use, public disclosure of TK may actually facilitate the very objectionable or detrimental use of TK, which the community wishes to prevent. It is generally accepted that protection of TK should be undertaken in a comprehensive manner, potentially using both positive and defensive forms of protection as necessary. In particular, defensive protection is no substitute for positive protection, and should not be mistaken for the acquisition and active exercise of rights in the protected material. Its impact is limited to preventing other parties from gaining illegitimate IP rights, and does not in itself prevent others from using this material. Often, the active assertion of rights (positive protection) is necessary to prevent the unauthorized or illegitimate use of TK. As was emphasized from the beginning of the Committee’s work, the objective “is not to put traditional knowledge, which is currently not in the public domain, into the public domain” (WIPO/GRTKF/IC/2/6, paragraph 10).

6. With this understanding, and to strengthen defensive protection, the Committee decided at its sixth session to develop a questionnaire on prior art criteria and draft recommendations

---

2 See the overview of forms of legal protection provided in document WIPO/GRTKF/IC/5/12, from paragraph 17, and the discussion of defensive protection from paragraph 28.
to authorities responsible for patent search and examination to take greater account of TK systems (on the basis of document WIPO/GRTKF/IC/6/8 and the previous proposals set out in that document). The present document provides an update on this activity, including the development of the questionnaire and a possible structure for the proposed recommendations.

III. QUESTIONNAIRE ON TRADITIONAL KNOWLEDGE IN THE PATENT SYSTEM

7. Between the Committee’s sixth and seventh sessions, a questionnaire on recognition of TK in the patent system (WIPO/GRTKF/IC/Q.5, also annexed to this document) was prepared and circulated to all WIPO Member States, as well as other stakeholders. The contents of this questionnaire were drawn from previous Committee work on these issues, including a series of Member State and regional group proposals (as outlined in WIPO/GRTKF/IC/6/8). The questionnaire covers both legal and practical aspects of the recognition of prior art, including the legal characteristics of relevant prior art used in determinations of novelty and non-obviousness (inventive step), the actual sources of prior art that are used in search and examination, other aspects of search and examination procedures, and provisions or case studies specifically concerning the recognition of TK and genetic resources during search and examination.

8. A collation of responses to the questionnaire received prior to the seventh session of the Committee will be circulated as an addendum to this document. This material should provide a broad empirical basis for the development of the proposed draft recommendations on taking account of TK during search and examination, discussed in the following section.

IV. OUTLINE OF DRAFT RECOMMENDATIONS FOR PATENT AUTHORITIES

9. As reviewed in detail in document WIPO/GRTKF/IC/6/8, various Member States and regional groups have put a series of case studies and proposals to the Committee concerning the need for patent search and examination authorities to take greater account of TK and genetic resources in the course of assessing the validity of patent applications. This also builds on the background and the tasks outlined in WIPO/GRTKF/IC/2/6 and subsequent Committee documents. On the basis of these proposals, the Committee decided at its sixth session to work towards draft recommendations. Such recommendations may have potential use in a number of contexts:

- assisting patent authorities to review and develop procedures that ensure relevant TK is taken account of during patent procedures, thus potentially improving the likelihood of validity of granted patents;
- providing a training and awareness tool for patent examiners, patent practitioners, researchers and innovative enterprises, community representatives, civil society representatives and other third parties concerned in with the validity of granted patents;
- provide specific practical guidance in the event that certain TK holders take an informed decision to document certain elements of their TK for the purpose of defensive publication (supplementing the toolkit for safeguarding TK holders’ interests during the documentation of TK);
providing an informal platform for cooperation between offices, for instance in recognizing concentrations of expertise in specific TK systems (as discussed in WIPO/GRTKF/IC/6/8, paragraph 22); and

- providing background guidance to or possible directions for policymakers and legislators during review and development of national and regional patent systems.

10. Following is a general outline that could form the basis of draft recommendations: this outline makes use of the extensive material on these issues that has already been considered by the Committee. Elaboration of this outline could be based on responses to WIPO/GRTKF/IC/Q.5 and on further discussion in and proposals submitted to the Committee. It is suggested that each section of the recommendations could consist of an explanatory passage, to promote awareness and to set the recommendations in context, followed by specific recommendations concerning the operations of patent authorities. It should be clarified that such recommendations are intended to promote greater and more effective attention to TK during patent search and examination within the bounds of the existing legal framework, as a practical means of promoting the realization of existing patent principles from a broader base of prior art and a wider understanding of the context of traditional knowledge.

(i) **Objective**

The objective could be to provide a platform for practical cooperation and policy development to improve the likelihood that granted patents are valid in the light of traditional knowledge and genetic resources, and with respect to relevant traditional knowledge systems.

Possible recommendations:

- refer to the need to promote this objective in the operations of patent authorities; and
- to use the following recommendations and guidelines in patent search and examination operations to that end.

(ii) **Overview of issues and illustrative scenarios**

This section could outline the issues, both legal and practical, that affect the recognition of TK as prior art in the determination of validity of patents and patent applications, especially with reference to novelty and obviousness. It could illustrate the nature of the problems faced by a series of illustrative scenarios. This section could draw on earlier material put to the Committee, in particular proposals and discussion by the Group of Latin American and Caribbean Countries (WIPO/GRTKF/IC/1/5), Asian Group (WIPO/GRTKF/IC/4/14), and the Delegation of Peru (WIPO/GRTKF/IC/5/13), as well as Secretariat papers on the subject (WIPO/GRTKF/IC/2/6, WIPO/GRTKF/IC/5/6 and WIPO/GRTKF/IC/6/8). This would also clarify the tension between the objective of disclosure for defensive purposes, and protecting TK against unauthorized disclosure and unauthorized use and misappropriation by third parties.
Possible recommendations:

- encourage patent authorities to give priority to recognizing relevant TK and the practical implications of such recognition in policy development, resource deployment and strategic planning of their operations, and to explore practical solutions to enhancing the validity of patents in the light of TK and TK systems.

(iii) Description of traditional knowledge

This section would briefly describe the nature of traditional knowledge and TK systems, acknowledging the diversity of such knowledge systems, and dealing with such aspects as its informal nature, traditional forms of preservation and transmission, the communal qualities of the ownership, development and transmission of TK, and the role of customary law and practices in governing traditional use and dissemination of TK. It would explain that, while it may be developed in a traditional context, much TK has a technical component, and can include empirically-based information of direct relevance to the technical patentability of claimed inventions in a wide range of technological fields.

Possible recommendations:

- refer to the need for patent examiners to be given training and awareness in TK and TK systems, where possible including direct training by TK holders working within a traditional context in the patent authority’s country; and
- recommend that offices prepare an analysis for the practical use of examiners of the relevance of relevant TK systems for patentability criteria.

(iv) Outline of legal issues relevant to TK and novelty

This section could describe in detail the technical issues concerning the recognition of TK, in particular the general scope of prior art relevant to novelty (such as foreign or local disclosure), the nature of disclosure required to defeat novelty, specific conditions for recognition of prior art (public availability, languages, publication, including aspects of internet or electronic publication), requirements to establishing the effective date of prior art, and the need for continuity of publication or public availability. (This would draw on the discussion in WIPO/GRTKF/IC/2/6 paragraphs 38 to 65, WIPO/GRTKF/IC/5/6 and WIPO/GRTKF/IC/6/8).

Possible recommendations:

- call for patent authorities to take full account of diverse contexts when assessing patent validity, including interpreting documents and publications from the point of view of the relevant traditional context and the teaching that would be apparent to a relevant TK holder; and
- set out specific, illustrative means of achieving this, noting that this approach should be undertaken within the existing bounds of the applicable patent law.

(v) Outline of legal issues relating to TK and non-obviousness

This section could describe in detail the technical legal issues that arise concerning the recognition of TK and TK systems when a claimed invention is assessed for non-obviousness
or the presence of an inventive step. This would focus on such questions such as how to
determine the person skilled in the art in the case of hybrid inventions that combine a TK
system with a formal technological discipline (see discussion in WIPO/GRTKF/IC/6/8,
paragraph 19).

Possible recommendations:

- encourage patent authorities and patent examiners to weigh fully the traditional
context when considering the non-obviousness of subject inventions;
- encourage patent examiners to consider an approach to applying the test of the
person skilled in the art with due reference to the context of specific elements of
traditional knowledge; and
- set out specific, illustrative means of achieving this, noting that this approach should
be undertaken within the existing bounds of the applicable patent law.

(vi) Outline of other potential legal issues

This section could discuss other legal issues that may be relevant to the recognition of
traditional knowledge, such as inventorship and entitlement to apply for a patent, and could
illustrate their relevance to traditional knowledge systems. (See the discussion of these issues
in the “WIPO Technical Study on Disclosure Requirements concerning Genetic Resources
and Traditional Knowledge.”)

Possible recommendations:

- for those patent authorities which have the legal competence to consider questions
either of inventorship or of entitlement to apply during examination of the patent,
encourage patent authorities, to raise these questions where there is prima facie
evidence that a TK holder may be an unacknowledged inventor, or that the
entitlement to apply may not have been derived from a TK holder who was the
source of the invention.

(vii) Outline of practical issues relating to searching for TK as prior art

This section could set out the practical possibilities for enhancing the scope of TK that is
actually searched and taken into account during the processing of patent applications. It could
draw attention to the range of resources concerning TK that are available for searching, such
as the TK Digital Library and the Honey Bee Network (drawing on documents
WIPO/GRTKF/IC/2/6, WIPO/GRTKF/IC/3/5 and WIPO/GRTKF/IC/3/6), and similar
materials concerning genetic resources (for example, the System-wide Information Network
for Genetic Resources (SINGER), reported in WIPO/GRTKF/IC/5/6, Annex II). It could also
underscore the difficulties and concerns that can arise from the further dissemination of some
TK, including some TK that is already published or otherwise publicly available. Consistent
with the general principle of prior informed consent, it could underscore that where there is
doubt about the status of TK and a possibility of remaining concerns on the part of the
originating community, its further distribution or dissemination should be limited
appropriately.
Possible recommendations:

- encourage patent authorities to incorporate into standard office procedures the systematic search of existing public domain sources of TK and information on genetic resources, including the databases and journals notified to the Committee;
- encourage patent authorities to train search and examination staff on the context of TK and sensitivities about its use and handling.

(viii) Coordination, consultation and cooperation

This section could set out the possible forms of coordination, consultation and cooperation, firstly with indigenous communities and representatives of TK holders, and secondly with other patent authorities, so as to promote the comprehensiveness and inclusiveness of search and examination. It would describe existing mechanisms, such as an advisory committee or consultative committee (WIPO/GRTKF/IC/5/INF/2, Annex I, 13 and 14), established to guide IP offices dealing with applications relating to TK, and experience with the development of specific search and examination units that concentrate on certain areas of TK-related patent applications. It could set these developments in the context of the broader trend towards work-sharing, and the development of specific areas of expertise in individual offices (in this case, concerning specific TK systems) that could facilitate the work of other offices, and ensure that patent applications relating to TK are given as effective a search and examination as is feasible. (This approach was outlined in WIPO/GRTKF/IC/6/8, paragraph 22).

Possible recommendations:

- encourage the development of advisory or consultative mechanisms to provide systematic advice to patent authorities on TK relevant to their operations;
- encourage patent authorities to share information on useful sources of public domain TK and info on GR that are relevant to specific areas of technology (e.g. medical, agricultural, ecological management);
- caution against procedures that would accelerate the public dissemination of TK that is not disclosed with the consent of TK holders; and
- encourage formal or informal cooperation to seek opinions, search or examination reports, or background information concerning specific TK-related applications from those offices with a recognized expertise in specific knowledge systems or traditions, from offices which have established a search or examination unit concentrating on a particular TK system or sector of TK, and from relevant consultative or advisory committees.

11. The recommendations could also include an annex of supplementary material for background, training and awareness-raising, such as case studies, illustrative provisions from existing office guidelines and examination manuals, and references to useful sources of public domain information on TK and genetic resources, based on the past work of the Committee and drawing on responses to questionnaire WIPO/GRTKF/IC/Q.5.

12. A full draft set of recommendations could be prepared for the consideration of the Committee at its eighth session. The questionnaire was initially circulated with a suggested deadline of September 30, 2004, for responses, so that the first round of responses could be made available to the seventh session of the Committee. To facilitate this and to broaden the base of the recommendations, the Committee may wish to encourage further responses to the questionnaire WIPO/GRTKF/IC/Q.5 to be submitted, preferably before January 31, 2005, to
ensure that this material can be taken into account in the further development of the recommendations.

13. The Committee is invited: (i) to consider the suggested outline for draft recommendations for patent authorities in paragraphs 8 and 9 above and to provide guidance on its further development, including the possible completion of a full draft for consideration at the Committee’s eighth session; and (ii) to call for further responses to be submitted to WIPO/GRTKF/IC/Q.5 (Questionnaire on Recognition of Traditional Knowledge and Genetic Resources in the Patent System) prior to January 31, 2005.

[Annex follows]
I. OVERVIEW

1. This questionnaire aims to collect information on legal and practical issues concerning the recognition of traditional knowledge (TK) and genetic resources in the examination of patent applications. It advances the work of the WIPO Intergovernmental Committee on Intellectual Property and Genetic Resources, Traditional Knowledge and Folklore (‘the Committee’) on defensive protection measures aimed at pre-empting the erroneous grant of patents which wrongly claim certain TK or genetic resources as inventions. Responses are sought especially from patent search and examination authorities, preferably by September 30, 2004, so that they can be compiled and considered by the Committee at its next session (which meets from November 1 to 5, 2004).

II. BACKGROUND: TRADITIONAL KNOWLEDGE AS PRIOR ART

2. There is a wide-ranging debate about the relationship between patents and genetic resources and TK, covering such issues as the role of patents within regimes governing access to and benefit sharing from genetic resources and associated TK, as well as the legitimacy of patents on genetic materials. This questionnaire is intended only to have limited scope; it does not address these important broader issues: these are being debated in the Committee and in other fora within WIPO and other international organizations and processes.

3. This questionnaire concentrates on specific aspects of patent law and procedure that arise about the status of TK and associated genetic resources in relation to claimed inventions. TK about the beneficial properties of a genetic resource may help an inventor to derive an invention from that genetic resource. But there are also concerns that patent claims may be drafted to cover inventions that consist directly of existing TK or genetic resources, or that are obvious adaptations or applications of existing TK or genetic resources. Such patents may be invalid, in principle, due to lack of novelty or obviousness (or because the applicant does not derive the right to apply from the true inventor). But there may be practical obstacles that mean that relevant TK and genetic resources are not taken into account during examination.
**What is defensive protection?**

4. Various defensive protection strategies have been employed to prevent the acquisition of intellectual property rights over TK or genetic resources by parties other than the customary custodians of the knowledge or resources. The Committee has developed and implemented several practical mechanisms for defensive protection. It has also referred proposals for improved defensive protection to other WIPO bodies for action. (A recent summary is provided in document WIPO/GRTKF/IC/6/8).

5. Defensive protection strategies focussed on the patent system have a legal and a practical aspect. The legal aspect entails ensuring that information is published or documented in such a way as to meet the legal criteria to be counted as prior art in the jurisdiction concerned (this may include, for instance, ensuring that there is a clear date of publication, and that the disclosure enables the reader to put the technology into effect). The practical aspect entails ensuring that the information is actually available to search authorities and patent examiners, and is effectively accessible to patent authorities (such as being indexed or classified), so that it is much more likely to be found in a search for relevant prior art. These two aspects were elaborated fully in document WIPO/GRTKF/IC/5/6. This questionnaire seeks information on both aspects.

**Limitations of defensive protection**

6. It is often stressed that protection of TK should be comprehensive, exploring both positive and defensive options. Defensive protection only aims to prevent other parties from gaining IP rights, and it does not in itself prevent others from using this material. Often, the active assertion of rights (positive protection) is necessary to prevent undesirable use of TK by third parties. In some scenarios, defensive protection may actually undermine the interests of TK holders, particularly when this involves giving the public access to TK which is otherwise undisclosed, secret or inaccessible. In the absence of positive rights, public disclosure of TK may actually facilitate the unauthorized use of TK which the community wishes to protect. Accordingly, no work on defensive protection (including this questionnaire) should be construed as encouraging TK holders to disclose, document or publish any element of their TK, or to give consent to their TK to be published or otherwise disseminated, unless they have had the opportunity to consider fully the consequences of doing so and have given their prior informed consent.

**III. OVERVIEW OF THIS QUESTIONNAIRE**

7. In March 2004, the Committee reviewed the work completed on defensive protection (WIPO/GRTKF/IC/5/6 and WIPO/GRTKF/IC/6/8) and commissioned a questionnaire to clarify the status of TK as prior art, and approved the development of draft recommendations to authorities responsible for patent search and examination to take greater account of TK systems (WIPO/GRTKF/IC/6/14, para. 110). The present document contains the questionnaire requested by the Committee.

**What will the questionnaire be used for?**

8. Responses to the questionnaire will help illustrate how TK and genetic resources may be taken into account during patent procedures. This information, once collated, may help
improve the effectiveness of any defensive protection strategies that custodians of TK and
genetic resources choose to use. It will also help inform and focus the proposed draft
recommendations to patent authorities. It is not intended to have any legal implications, and
any comments on applicable laws are not intended to be definitive or authoritative. It is,
rather, intended to promote the flow of practical information and the development of practical
recommendations.

**Who should answer this questionnaire?**

9. To give a comprehensive picture of the current situation, input is sought from patent
authorities responsible for search and substantive examination of patent applications. Other
participants in the Committee’s work are also invited to answer on the basis of their
experience.

**What sources are relevant?**

10. As this questionnaire has a practical focus, responses should draw on as wide a range of
sources as possible to document the actual practice of patent authorities. Relevant sources
may include national or regional laws and regulations, office practice guidelines and
examination manuals, office determinations and policy statements, and specific judicial or
administrative decisions.

**Responding to the questionnaire**

This deadline is set so that a collation and initial summary of responses can be circulated at
the seventh session of the Committee, which meets between November 1 to 5, 2004. Later
submissions of the questionnaire may possibly be considered in subsequent meetings of the
Committee, depending on decisions taken concerning its work.

12. If possible, responses should preferably be in electronic form, to be sent by email to
WIPO at grtkf@wipo.int (with the heading “Q5 response”). Responses may otherwise be sent
by fax or regular mail to WIPO, 34 chemin des Colombettes, 1211 Geneva 20 (Switzerland),
Fax 41 22 338 8120. Any queries about the questionnaire can be directed to the Traditional
Knowledge Division at the same email or fax address, or by telephone at 41 22 338 9111.

**Scope and definitions**

13. While there is no formal international definition, TK can be characterized in general as
knowledge which is:

- generated, preserved and transmitted in a traditional context;
- distinctively associated with the traditional or Indigenous culture or community
  which preserves and transmits it between generations;
- linked to a local or Indigenous community through a sense of custodianship,
  guardianship or cultural responsibility, such as a sense of obligation to preserve
  the knowledge or a sense that to permit misappropriation or demeaning usage
  would be harmful or offensive; this relationship may be expressed formally or
  informally by customary law or practices;
- ‘knowledge’ in the sense that it originates from intellectual activity in a wide
  range of social, cultural, environmental and technological contexts; and
Genetic resources are defined in the Convention on Biological Diversity as “genetic material of actual or potential value;” and genetic material is in turn defined as “any material of plant, animal, microbial or other origin containing functional units of heredity.

Some illustrative scenarios

14. The status of TK can be very diverse when considered from the perspective of standard patent principles. TK need not be ‘old’ or ‘ancient,’ and may itself be novel or innovative. It may be held confidentially within a community or a smaller group, or it may be public knowledge. A TK holder may be the actual inventor (or one of several inventors) of a claimed invention. The following imaginary scenarios should help illustrate the context for this work. They refer to the kind of practical situation in which questions can arise as to the prior art status of TK, and the practicalities of locating it during the course of examination:

- TK has been openly used, non-commercially, within a remote, relatively small traditional community in a foreign country; it has been extensively used in that community, but has never been fully documented; there is no indication it has been known or used outside the community;
- TK has been used secretly within a traditional community, in part to produce a medical cure, and some products of this use have been sold beyond the community; the users are under an obligation through customary law to limit the dissemination of the knowledge as such to certain authorized members of the community;
- TK has been recorded in an ancient language on a fragile and valuable parchment, which is now in a public collection; this parchment is cited in a public catalogue but can only be accessed by bona fide historical scholars upon request;
- a claimed invention concerns an innovation essentially within an established TK system in one country, which would be obvious to a practitioner in that system, but may not be obvious to a researcher in the country where the patent is applied for.

QUESTIONNAIRE: PATENT PROCEDURES AND TRADITIONAL KNOWLEDGE

CONTACT DETAILS

Please provide the following details:
– Name, Title and Organization
– Country this response refers to.
– Address (postal, email)
– Telephone and Facsimile

Part I: Role of the office

The questions in part I seek to clarify the role of the patent authority in your jurisdiction, to give a basic context to the remainder of the questionnaire. If the patent authority does not conduct search and substantive examination, then you need only answer Parts I, II and V.

Q1. Prior art searching: In your jurisdiction, is a search conducted for relevant prior art during the prosecution of a patent application? If so, when is the search conducted? What triggers the search (e.g. a routine step during patent procedure, at the request of patent applicants, or at the request of third parties)?

Q2. Substantive examination: In your jurisdiction, are patent applications given substantive examination? If so, when is the examination conducted, and what triggers the examination (e.g. a routine step during patent procedure, at the request of patent applicants, or at the request of third parties)? Is examination conducted at the same time as searching, or separately? What procedures exist for third parties to challenge the validity of a patent application or a granted patent?

PART II: LEGAL CHARACTERISTICS OF PRIOR ART

The questions in Part II concern the legal standards that define what material is eligible for consideration as prior art, and can therefore be considered when assessing the novelty and non-obviousness (inventive step) of a claimed invention. The sources of these standards may include legislation, regulations, judicial and administrative decisions, and office guidelines.

Q3. General scope of prior art relevant to novelty: What is defined in your jurisdiction as prior art that is relevant to the determination of an invention’s novelty? Does it include:

   (i) information that is published in written form locally or in foreign countries?
   (ii) information that is orally disclosed locally or in foreign countries?
   (iii) other information, such as public working of invention, secret use of the invention? If so, please specify.

Q4: Nature of disclosure: Are there any established standards or criteria for determining the content that a prior art reference must disclose in order to be relevant (e.g. sufficient information to enable a person skilled in the art to carry out the claimed invention)?

   – If this entails reference to a person skilled in the art, how is that concept defined?
Q5. Specific conditions for recognition of prior art: What other specific conditions apply in determining whether a certain piece of prior art has been sufficiently disclosed to be taken into account?

   (i) Public availability: If the prior art must be available to the public to be relevant, how has the relevant public been defined – e.g. what is a public setting, and what form of disclosure amounts to availability? Alternatively, what kinds of semi-public disclosure or disclosure within a private setting have not been counted as relevant disclosure of prior art?)

   (ii) Languages: Is prior art counted if it is only available in foreign languages (including dead languages), or minority languages?

   (iii) Publication: If prior art must be ‘published’ to be taken into account, what criteria apply for prior art to be an eligible form of publication?

   (iv) Internet or electronic publication: What counts as publication or public availability on the internet or on other digital networks?
   -- Is there a requirement for networks to be publicly accessible?
   -- Is material on proprietary (pay for use) databases or digital networks included as potential prior art? Does this apply to databases or networks that are private, for example accessible only by members of a particular community, or employees of a particular company, university or research institute?
   -- What conditions apply for material uploaded on the Internet to be taken into account as prior art?

   (v) Other conditions: Are there any other conditions that can determine whether certain information can be taken into account as relevant prior art?

Q6. Establishing the effective date of prior art: What determines the effective date for prior art to be cited against a patent application?

   -- What standards of evidence are required to demonstrate that a written disclosure was published on or by a certain date?
   -- What standards of evidence are required to demonstrate that an oral disclosure was made on or by a certain date?
   -- What standards of evidence proof are required to demonstrate that material was published on-line?
   -- For a patent document, is the effective date the priority date, filing date or publication date?

Q7. Continuity of publication: Does material have to be continuously available to be relevant as prior art, or does it remain valid even if it has been withdrawn from circulation or made inaccessible to the public for a certain period?

   -- Does a published disclosure have to be continuously publicly available to be counted as prior art?
   -- Does material published on the Internet or other publication have to be demonstrated to be continuously available to be counted as prior art?
Q8. Specific decisions or guidelines: In your jurisdiction, have there been any specific judicial or administrative decisions, or examination guidelines, that refer to the status of TK or genetic resources as prior art for the determination of novelty? If so, please give details.

Prior art relevant for non-obviousness

Q9. Prior art base for non-obviousness: Please describe in general terms the prior art that may be taken into account when determining whether an invention is non-obvious (or involves an inventive step).

- in what respects does it differ from the standard that applies to prior art for the assessment of novelty (with reference to the issues raised in questions 3 to 6)?

Q10. Person skilled in the art: What standards apply to determining the person skilled in the art (or equivalent test) when assessing non-obviousness (inventive step) in your jurisdiction?

- If an element of TK (including TK associated with certain genetic resources) is considered available to or accessible by the public outside the original community that holds the TK, but the skills to interpret or practice the art of TK are limited to the community only, how would the person skilled in the art be assessed for the determination of inventive step?

Q11. Specific decisions or guidelines: In your jurisdiction, have there been any specific judicial or administrative decisions, or examination guidelines, that refer to the status of TK as prior art for the determination of non-obviousness (inventive step), or concerning practitioners of TK as persons skilled in the art? If so, please give details.

PART III: SOURCES OF PRIOR ART IN PATENT PROCEDURES

The questions in Part III concern the actual mechanisms that are used during patent procedures to locate potentially relevant prior art.

Q12. General sources of prior art: What are the sources of prior art that are considered during patent procedures:

(i) Voluntary disclosure by applicants within patent specifications?
(ii) Mandatory disclosure by applicants? If so, how is the obligation defined?
- disclosure must be within the patent specification?
- disclosure must be separately submitted to the patent authorities?
(iii) Searching within your office?
(iv) International searches (under the PCT)?
(v) Searches from other sources (such as from other patent offices)?
Q13. **In-house searching:** If searching is undertaken in your office during patent procedures, what are the sources searched:

- patent documents?
- non-patent literature (printed)?
- non-patent information (electronic/on-line)?

Do searches regularly make use of any sources (databases, journals, textbooks, etc) that relate specifically to TK (e.g. the TK Digital Library) or genetic resources (e.g. the IPGRA Singer database)?

Q14. **Scope of search and search strategies:** What is the scope of the regular search for prior art (e.g. in terms of classification of subject matter)? What are the standard search strategies or guidelines that are employed? Under what conditions are searches broadened or extended beyond the standard procedures?

Q15. **Work-sharing and technological focus:** Due to resource constraints or other practical limitations, does search or examination in your office concentrate on any specific areas of technology? Does your office make use of external search or examination results in any areas of technology, either as informal background information or through formally recognition?

**PART IV: OTHER ISSUES CONCERNING PATENT PROCEDURE**

The questions in Part IV concern other procedural and practical issues that have arisen in discussion on improved search and examination procedures relating to TK and genetic resources.

Q16. **Inventorship and entitlement to apply:** Is inventorship or the applicant’s entitlement to apply substantively considered during patent examination, either routinely or exceptionally? If it is done exceptionally, what triggers this consideration?

   (i) If a prior art publication, document (such as a legal agreement) or other information is available to your office which appears to provide evidence that a patent application:

   - incorrectly names the inventor(s); or
   - is submitted by an applicant who is not entitled to apply for or be granted a patent;

   is this an adequate basis for your office to reject the application?

   (ii) Would your answer differ if the information is publicly available or not?

   (iii) If there is substantive consideration of inventorship and entitlement to apply, and there are grounds to believe that a person other than the applicant would be entitled to receive a patent (or a share of a patent), is it possible for the patent to be issued in the name of that party, or to be transferred to that party?
Q17. Supply of prior art citation to applicant: When prior art information is relied upon to reject a patent application is a copy of this information supplied to the applicant?

Q18. Information not available to applicant: Can information available to an examiner but not necessarily available to an applicant (e.g. in a restricted database) be relied upon to reject a patent application?

PART V: INVENTIONS BASED ON TK AND GENETIC RESOURCES

The questions in Part V concern specific guidelines or mechanisms that are used during patent procedures; for example, one patent office has a division of specialists working on examination of patents concerning traditional medicine.

Q19. Specialization on TK and genetic resources: To what extent is a distinct or specialized approach taken for search and examination of inventions which are based on any area of TK or use certain genetic resources? In particular:

(i) Are there any specific search guidelines or regular search strategies that are required or are employed for patent applications that include subject matter relating to or based upon TK or genetic resources? If so, please provide details.

(ii) Are there specialist searchers or examiners, or search and examination groups, that concentrate on certain areas of TK (e.g. traditional medicine systems) or technologies based on or making use of genetic resources in a specific area (e.g. agricultural biotechnology)?

Q20. Practical lessons: Can you supply details of any cases in your jurisdiction that have illustrated:

(i) significant legal issues concerning the status of certain TK as prior art; or

(ii) problems concerning the practical availability for search and examination purposes of potentially relevant TK?

Please advise of any practical lessons or insights that can be derived from these cases.

Q21. Suggestions for guidelines: Based on the practical experience of your office, or based on other experiences and cases, do you have any suggestions for possible guidelines or practical recommendations for search and examination procedures concerning inventions based on or derived from TK or genetic resources?

Thank you for the valuable time and consideration you have given to this questionnaire. Your response will help to advance policy debate and practical understanding in this important area.
