

# GII 2023 results

The GII unveils the world's innovation leaders, gauging the innovation performance of 132 economies.

**Figure 10 Key global innovation changers 2023**

**The GII dynamo: The top 15 innovators, 2020–2023**

Switzerland ranks first in the GII for a 13<sup>th</sup> consecutive year.

Sweden (2<sup>nd</sup>) overtakes the United States.

Singapore enters the top 5.

Finland (6<sup>th</sup>) moves up closer to the top 5.

France (11<sup>th</sup>) gets closer to the top 10, after breaking into the top 15 in 2020.

China (12<sup>th</sup>) is the only middle income economy within the top 30, and close to the top 10.

Israel moves back into the top 15.

Note: Year-on-year comparisons of GII rankings need to take into account changes to the GII model that have occurred over time, as well as data availability.

This section presents the highlights of the *Global Innovation Index 2023* (GII) ranking, including a discussion on the top ranked economies by income group and world region, as well as identifying those economies overperforming on innovation relative to level of development.

Appendix I provides details on how to interpret the results, cautioning against a strict year-on-year comparison of GII rankings.

It is important to note that the GII 2023 is unique, because it incorporates a significant amount of data from the pandemic and post-pandemic years. Approximately 88 percent of the data points used to construct the GII 2023 rankings cover the 2020–2023 period. Specifically, a majority of the data points are from 2021 (34 percent) and 2022 data (35 percent). This extensive use of COVID-19 pandemic-era data, together with the associated country-specific policy responses, including differences in lockdown and reopening periods, as well as the more recent impacts of armed conflict in Ukraine, has multifaceted effects on the rankings, so also the related country-specific swings in gross domestic product (GDP) – the scaling factor for a number of variables. These factors need to be considered carefully when evaluating GII 2023 rank shifts.

## Innovation leaders in 2023

**Switzerland continues to be the uncontested innovation world champion, Singapore makes the top five, and Indonesia joins China, Türkiye, India, the Islamic Republic of Iran and Viet Nam as most impressive innovation climbers of the last decade**

For a 13<sup>th</sup> consecutive year, Switzerland ranks first in the GII (Figure 10). It is the global leader in innovation outputs, ranking first in both Knowledge and technology outputs and Creative outputs. Sweden overtakes the United States (US) to climb to second position. Sweden leads in Business sophistication (1<sup>st</sup>), Infrastructure (2<sup>nd</sup>) and Human capital and research (3<sup>rd</sup>). It holds top positions for its Researchers (1<sup>st</sup>) and its Knowledge-intensive employment (3<sup>rd</sup>). The United States continues to head the league table of scoring best in the world in 13 of the 80 GII 2023 innovation indicators (Box 1). It is number one in the world in indicators that include Global corporate R&D investors, Venture capital received, the quality of its universities, the combined valuation of its unicorn companies (a new GII indicator – Box 3), software spending and the value of corporate Intangible asset intensity.

Singapore enters the top five, and takes the leading position among South East Asia, East Asia and Oceania (SEAO) region economies. Finland (6<sup>th</sup>) gets closer to the top five, gaining three ranks this year. It comes top worldwide in Infrastructure (1<sup>st</sup>).

Denmark (9<sup>th</sup>) and the Republic of Korea (10<sup>th</sup>) remain in the top 10. France (11<sup>th</sup>) gets closer, improving one rank this year, while Japan remains strong as the 13<sup>th</sup> most innovative economy. Israel re-enters the top 15, reaching 14<sup>th</sup> place.

After a rapid ascent, gaining 23 positions over the last decade, China ranks 12<sup>th</sup> this year, dropping one rank relative to 2022.<sup>1</sup> China remains the sole middle-income economy to secure a position among the top 30, retaining 3<sup>rd</sup> place in the SEAO region and top spot in the upper middle-income group (see Figure 11 and Table 3). Belgium (23<sup>rd</sup>) re-enters the top 25, climbing three ranks.

All eight Nordic and Baltic economies improved their ranking this year, except for Iceland, which stays at 20<sup>th</sup> spot. Estonia gains two ranks and edges the top 15, at 16<sup>th</sup> place. Norway (19<sup>th</sup>) re-enters the top 20. Lithuania (34<sup>th</sup>) and Latvia (37<sup>th</sup>) make the largest improvements, gaining five and four ranks respectively, with Latvia re-entering the top 40.

Apart from China, there are only four other middle-income economies among the top 40 economies, namely, Malaysia (36<sup>th</sup>), Bulgaria (38<sup>th</sup>), Türkiye (39<sup>th</sup>) and India (40<sup>th</sup>).

The United Arab Emirates stabilizes at 32<sup>nd</sup> place, close to the top 30. Saudi Arabia (48<sup>th</sup>) and Qatar (50<sup>th</sup>) make it into the top 50. Middle East economies Bahrain (67<sup>th</sup>), Oman (69<sup>th</sup>), Jordan (71<sup>st</sup>) and Egypt (86<sup>th</sup>) also experience notable improvements in their innovation ranking –

with Bahrain and Oman entering the top 70, and Jordan just outside. In sum, these are some systematic and positive innovation rank developments in the Middle East.

Brazil (49<sup>th</sup>) makes it into the top 50 in 2023, following a gradual ascent over recent years, overtaking Chile (52<sup>nd</sup>) as the most innovative economy in Latin America and the Caribbean. Uruguay (63<sup>rd</sup>) and El Salvador (95<sup>th</sup>) are the only two other economies within the region that improve their ranking in 2023.

Thailand (43<sup>rd</sup>) and Viet Nam (46<sup>th</sup>) consolidate their positions in the top 50, while the Philippines (56<sup>th</sup>) gets closer. Viet Nam and the Philippines continue marching forward, after a setback in 2022, gaining two and three ranks, respectively. Indonesia (61<sup>st</sup>) moves rapidly toward the top 60, following a rise over recent years. Together with China, India, the Islamic Republic of Iran (62<sup>nd</sup>), the Philippines, Türkiye and Viet Nam, Indonesia joins the group of middle-income economies within the GII top 65 that climbed fastest in the GII ranking over the last decade.

In the last four years, and since the start of the pandemic, Mauritius (57<sup>th</sup>), Indonesia, Saudi Arabia, Brazil and Pakistan ascended most in the GII, in order of their rank progression.

In Central and Southern Asia, Kazakhstan (81<sup>st</sup>) and Uzbekistan (82<sup>nd</sup>) are close to the top 80, while Pakistan (88<sup>th</sup>) follows closely, the latter overperforming on innovation once again in 2023.

Nine out of the 26 economies from Sub-Saharan Africa (SSA) covered this year improve their ranking. South Africa (59<sup>th</sup>) enters the top 60. Rwanda (103<sup>rd</sup> and low-income group leader) continues moving ahead. Senegal (93<sup>rd</sup>) and Nigeria (109<sup>th</sup>) take two of the biggest leaps forward. Excluding island economies, Senegal becomes the region's third most innovative economy in 2023 (see Figure 11).

**Figure 11 Global innovation leaders in 2023**

#### Top three innovation economies by region

<b>Europe</b>	<b>Northern America</b>	<b>Latin America and the Caribbean</b>	<b>Central and Southern Asia</b>
1. Switzerland	1. United States	1. Brazil ↑	1. India
2. Sweden	2. Canada	2. Chile ↓	2. Iran (Islamic Republic of)
3. United Kingdom		3. Mexico	3. Kazakhstan ☆
<b>South East Asia, East Asia, and Oceania</b>	<b>Northern Africa and Western Asia†</b>	<b>Sub-Saharan Africa*</b>	
1. Singapore ↑	1. Israel	1. South Africa	
2. Republic of Korea ↓	2. United Arab Emirates	2. Botswana	
3. China	3. Türkiye	3. Senegal ☆	

#### Top three innovation economies by income group

<b>High-income</b>	<b>Upper middle-income</b>	<b>Lower middle-income</b>	<b>Low-income group</b>
1. Switzerland	1. China	1. India	1. Rwanda
2. Sweden ↑	2. Malaysia ↑	2. Viet Nam	2. Madagascar
3. United States ↓	3. Bulgaria ↓	3. Ukraine ☆	3. Togo ☆

☆ Indicates a new entrant into the top three in 2023.

↑↓ Indicates movement in ranking (up or down) within the top three, relative to 2022.

\* Top three in Sub-Saharan Africa (SSA) – excluding island economies. The top five within the region, including all economies, comprise Mauritius (1<sup>st</sup>), South Africa (2<sup>nd</sup>), Botswana (3<sup>rd</sup>), Cabo Verde (4<sup>th</sup>) and Senegal (5<sup>th</sup>).

† Top three in Northern Africa and Western Asia (NAWA) – excluding island economies. The top four within the region, including all economies, comprise Israel (1<sup>st</sup>), Cyprus (2<sup>nd</sup>), United Arab Emirates (3<sup>rd</sup>) and Türkiye (4<sup>th</sup>).

Notes: World Bank Income Group Classification (July 2022). Year-on-year GII rank changes are influenced by performance and methodological considerations; some economy data are incomplete (see Appendix I).

### Box 1 GII innovation indicators – 2023 trailblazers

The United States continues to lead in terms of number of GII innovation indicators for which it ranks top globally, ranking 1<sup>st</sup> in the world on 13 out of 80 indicators in 2023.

Singapore follows the United States globally and is number one worldwide on 11 indicators, the same amount as in 2022, including leading in Operational stability for businesses, Government effectiveness, ICT access, Logistics performance, Venture capital received, High-tech manufacturing, and GitHub commits. Israel follows in 3<sup>rd</sup> place, leading in nine innovation indicators, including R&D expenditure, University–industry R&D collaboration, PCT patents and ICT services exports. Switzerland and Hong Kong, China, tie jointly in 4<sup>th</sup> place, attaining top ranking in Patent families and High-tech imports, respectively. They are followed by Japan in 6<sup>th</sup> place, leading in Production and export complexity.

In addition to the top winners globally, there are middle- and low-income economies excelling in various domains. Relative to other countries and to its GDP or population, Namibia ranks 1<sup>st</sup> in Expenditure on education, Mozambique in Gross capital formation, and Cambodia and Nepal in Loans from microfinance institutions. Relatively, Mauritius leads globally in Venture capital investors, the Islamic Republic of Iran in Trademarks and Mongolia in Trademarks, as well as Industrial designs.

**Box Table 1 Economies with the most GII indicators ranked top, 2023**

Economy	Innovation indicators that economies score best in worldwide		
	Inputs	Outputs	Total
United States	6	7	13
Singapore	8	3	11
Israel	6	3	9
Switzerland	4	4	8
Hong Kong, China	5	3	8
Japan	4	3	7
China	2	4	6
Iceland	2	4	6
Malta	3	3	6
Finland	3	2	5
Estonia	4	1	5
Luxembourg	4	1	5

Source: Global Innovation Index Database, WIPO, 2023.

Note: The GII methodology allows multiple economies to rank 1<sup>st</sup> on any one indicator; see Economy profiles and Appendix I.

Mongolia (68<sup>th</sup>) and Egypt (86<sup>th</sup>) both improve their position by three places, while Senegal (93<sup>rd</sup>) gains six places.

Beyond the top 100, Rwanda (103<sup>rd</sup>), Nepal (108<sup>th</sup>), Nigeria (109<sup>th</sup>) and Togo (114<sup>th</sup>) have progressed the most in the rankings, increasing between two and eight positions this year. Rwanda performs exceptionally well in Institutions (33<sup>rd</sup>) and holds top ranks in Labor productivity growth (2<sup>nd</sup>), Policies for doing business (11<sup>th</sup>), Graduates in science and engineering (15<sup>th</sup>) and Venture capital recipients (20<sup>th</sup>). Rwanda also maintains 1<sup>st</sup> position among the low-income group, while Madagascar (107<sup>th</sup>) and Togo (114<sup>th</sup>) claim 2<sup>nd</sup> and 3<sup>rd</sup> position, respectively (Table 3).

**Table 3 Top 10 economies by income group (rank)**

Rank	Global Innovation Index 2023	Rank	Global Innovation Index 2023
<b>High-income economies (48 in total)</b>			
1	Switzerland (1)	1	China (12)
2	Sweden (2)	2	Malaysia (36)
3	United States (3)	3	Bulgaria (38)
4	United Kingdom (4)	4	Türkiye (39)
5	Singapore (5)	5	Thailand (43)
6	Finland (6)	6	Brazil (49)
7	Netherlands (Kingdom of the) (7)	7	Russian Federation (51)
8	Germany (8)	8	Serbia (53)
9	Denmark (9)	9	North Macedonia (54)

Box 2 outlines important 'dos and don'ts', when using the GII to improve an economy's innovation performance.

### Box 2 How to best use the Global Innovation Index (GII) and what not to do?

For many years, governments around the world have successfully used the Global Innovation Index (GII) to improve their economy's innovation performance and shape evidence-based innovation policies. A survey carried out by WIPO in 2022 showed 70 percent of WIPO member states were using the GII to improve innovation ecosystems and metrics, as well as it being a benchmark for national innovation policies or economic strategies. It is heartening to see that the GII is being used by a wide range of economies, from low- to high-income, across every one of the world's regions.

One major benefit of the GII is that it puts evidence and metrics at the core of conceiving, deploying and evaluating innovation policies. A first step brings together statisticians, innovation actors and policymakers in order to understand a country's innovation performance, based on the GII metrics. In a second step, the policy discussion turns to leveraging domestic innovation opportunities, while at the same time overcoming country-specific weaknesses. Both steps are an exercise in coordination among different public and private innovation actors, as well as between government entities. In select countries, the GII has facilitated just such a dialogue across innovation actors and government entities.

#### Some dos:

- Ensure innovation is embedded as a key priority in a country's pathway to national development and progress, possibly formulated within a clear innovation policy.
- Establish a cross-ministerial task force to pursue innovation policy matters through a "whole of government approach," ideally reporting to the top tier of government, for instance, the Prime Minister's Office.
- Ensure any innovation policy task force consults with innovation actors from both the private and public sectors, including start-ups, research universities and innovation clusters. The private sector, in particular, is key, as is broad representation from manufacturing, services and traditional industries, as well as diverse entrepreneurial strands.
- Ensure any national intellectual property (IP) policy is aligned with or even integrated into innovation policy.
- Ensure those targets or actions that are part of an innovation policy are quantifiable and can be evaluated.

**Some don'ts:**

- Do not set over-ambitious and therefore unrealistic GII ranking targets. GII rankings rarely increase in leaps and bounds from one year to the next, particularly at the top.
- Do not expect policy changes to result in immediate improved GII indicator performance. There are important lags between the formulation of innovation policy and its execution and impact. The latest available innovation data is also rarely current, often lagging by several years.
- Do not treat the GII as a mathematical exercise, that is, by attempting to collect or focus on specific indicators simply to climb the rankings. A country's GII rank alone is only a partial reflection of a national innovation ecosystem and related progress. Moreover, the GII framework changes regularly. Do not therefore over focus on year-on-year changes within the GII, because these are influenced by relative performance vis-à-vis other countries, together with other methodological considerations (see Appendix I). Setting objectives for a period of years – for example, three to five years – and then reviewing combined progress over several years is a more appropriate way of using the GII.

With this in mind, the GII has become a catalyst for the national collection of innovation indicators. Economies have an interest in ensuring the GII can rely on the complete and updated innovation metrics they provide. As detailed in Appendix III, the vast majority of GII data is not collected by the World Intellectual Property Organization (WIPO) itself directly from its member states. Instead, WIPO uses data submitted by economies to those organizations globally responsible for a particular data collection (e.g., the UNESCO Institute for Statistics for data relating to R&D). The sole exception is the intellectual property data WIPO collects annually from members states.<sup>2</sup> For all other data sets, the GII team is able to help countries identify missing and outdated data (marked clearly in the economy profiles and briefs) and advise data collectors on how to remedy the situation.

Finally, a new trend is the interest being expressed by countries in building sub-national innovation indices at the regional or city level that mirror the GII framework or comprise selected GII indicators (WIPO, 2023a). WIPO has pledged to support this work in two ways: (i) by organizing workshops on the exchange of best practice, and (ii) providing a background study on sub-national innovation indices.<sup>3</sup> Member states are welcome to join this effort.

## Innovation overperformers

### Several middle- and low-income economies are performing above expectation on innovation relative to their level of economic development

In the GII 2023, 21 economies are performing above expectation relative to their level of development – these are the GII innovation overperformers (Figure 12 and Table 4).

India, the Republic of Moldova and Viet Nam continue to be record holders by being innovation overperformers for a 13<sup>th</sup> consecutive year. The Republic of Moldova (60<sup>th</sup>) scores above its income level in Human capital and research (67<sup>th</sup>), as well as both output pillars – Knowledge and technology outputs (60<sup>th</sup>) and Creative outputs (42<sup>nd</sup>). The Philippines (56<sup>th</sup>) and Morocco (70<sup>th</sup>) keep their innovation overperformer status for a fifth time.

There are also two notable comebacks this year, namely, Senegal (93<sup>rd</sup>) and North Macedonia (54<sup>th</sup>). In addition, Indonesia (61<sup>st</sup>), Uzbekistan (82<sup>nd</sup>) and Pakistan (88<sup>th</sup>) keep their overperformer status for a second and Brazil (49<sup>th</sup>) for a third consecutive year.

From a regional perspective, this year there is an equal number of innovation overperformers in South East Asia, East Asia, and Oceania, and Sub-Saharan Africa, each region having five innovation overperformers. Tying in 3<sup>rd</sup> place, with three overperforming economies each, are Europe, Central and Southern Asia, and Northern Africa and Western Asia. In 6<sup>th</sup> place is Latin America and the Caribbean, with two innovation overperformers.

Conversely, 37 economies are performing below expectation on innovation, the majority from Latin America and the Caribbean (11) and Sub-Saharan Africa (9). Among the high-income group, three are Eastern European economies, namely, Poland (41<sup>st</sup>), Slovakia (45<sup>th</sup>) and Romania (47<sup>th</sup>).

In the upper middle-income group, the six underperformers are Latin American and Caribbean economies Argentina (73<sup>rd</sup>), Costa Rica (74<sup>th</sup>), the Dominican Republic (94<sup>th</sup>), Paraguay (98<sup>th</sup>), Ecuador (104<sup>th</sup>) and Guatemala (122<sup>nd</sup>). All six of these economies also drop down the GII ranking in 2023. In the lower middle-income group, nine economies are performing below expectation for their level of development, including Sub-Saharan African economies Côte d'Ivoire (112<sup>th</sup>), Benin (120<sup>th</sup>), Cameroon (123<sup>rd</sup>), Mauritania (127<sup>th</sup>) and Angola (132<sup>nd</sup>).

Relative to 2022, 23 economies have switched performance groups. Seven economies have raised their performance status from below expectation to matching expectation, namely, Lithuania (34<sup>th</sup>), Greece (42<sup>nd</sup>), Egypt (86<sup>th</sup>), El Salvador (95<sup>th</sup>), Namibia (96<sup>th</sup>), Nigeria (109<sup>th</sup>) and Zambia (118<sup>th</sup>).

**Figure 12 Innovation overperformers, relative to their economic development**

Source: Global Innovation Index Database, WIPO, 2023.

Note: Bubbles sized according to population. The cubic spline trendline shows the expected level of innovation performance at different levels of GDP per capita for all economies covered in the GII 2023.

**Table 4 Innovation overperformers in 2023: Income group, region and years as an innovation overperformer**

Economy	Income group	Region	Years as an innovation overperformer (total)
India	Lower middle-income	Central and Southern Asia	2011–2023 (13)
Republic of Moldova	Upper middle-income	Europe	2011–2023 (13)
Viet Nam	Lower middle-income	South East Asia, East Asia, and Oceania	2011–2023 (13)
Mongolia	Lower middle-income	South East Asia, East Asia, and Oceania	2011–2015, 2018–2023 (11)
Rwanda	Low-income	Sub-Saharan Africa	2012, 2014–2023 (11)
Ukraine	Lower middle-income	Europe	2012, 2014–2023 (11)
Thailand	Upper middle-income	South East Asia, East Asia, and Oceania	2011, 2014–2015, 2018–2023 (9)
Jordan	Upper middle-income	Northern Africa and Western Asia	2011–2015, 2022–2023 (7)
Madagascar	Low-income	Sub-Saharan Africa	2016–2018, 2020–2023 (7)
Senegal	Lower middle-income	Sub-Saharan Africa	2012–2015, 2017, 2023 (6)
South Africa	Upper middle-income	Sub-Saharan Africa	2018–2023 (6)
Morocco	Lower middle-income	Northern Africa and Western Asia	2015, 2020–2023 (5)
Philippines	Lower middle-income	South East Asia, East Asia, and Oceania	2019, 2020–2023 (5)
Tunisia	Lower middle-income	Northern Africa and Western Asia	2018, 2020–2023 (5)
Burundi	Low-income	Sub-Saharan Africa	2017, 2019, 2022–2023 (4)
Brazil	Upper middle-income	Latin America and the Caribbean	2021–2023 (3)
Jamaica	Upper middle-income	Latin America and the Caribbean	2020, 2022–2023 (3)
North Macedonia	Upper middle-income	Europe	2019–2020, 2023 (3)
Indonesia	Lower middle-income	South East Asia, East Asia, and Oceania	2022–2023 (2)
Pakistan	Lower middle-income	Central and Southern Asia	2022–2023 (2)
Uzbekistan	Lower middle-income	Central and Southern Asia	2022–2023 (2)

Notes: Income group classification follows the World Bank Income Group Classification (July, 2022). Geographical regions correspond to the United Nations publication on standard country or area codes for statistical use (M49).

## Converting innovation investment into tangible innovation output

### Several middle-income economies are more efficient at translating innovation inputs into outputs than their high-income counterparts

Among high-income economies, Switzerland leads (1<sup>st</sup>) in producing higher levels of outputs compared to Sweden (2<sup>nd</sup>), the United States (3<sup>rd</sup>) and Finland (6<sup>th</sup>), while Germany (8<sup>th</sup>) produces similar output levels to the United States and the Kingdom of the Netherlands (7<sup>th</sup>), but with lower input levels (Figure 13).

Among upper middle-income group economies, China (12<sup>th</sup>) also shines, producing levels of outputs comparable to high-income economies like Singapore (5<sup>th</sup>), Denmark (9<sup>th</sup>) and France (11<sup>th</sup>), but with fewer inputs. Türkiye (39<sup>th</sup>) does likewise relative to New Zealand (27<sup>th</sup>) and Hungary (35<sup>th</sup>).

Among the lower-middle income group, Morocco (70<sup>th</sup>) and Pakistan (88<sup>th</sup>) are efficient innovators, while Madagascar (107<sup>th</sup>) stands out among the low-income group.

However, certain economies, including the United Arab Emirates (32<sup>nd</sup>), Saudi Arabia (48<sup>th</sup>), Qatar (50<sup>th</sup>), Serbia (53<sup>rd</sup>), Bahrain (67<sup>th</sup>), Peru (76<sup>th</sup>), and Cabo Verde (91<sup>st</sup>), struggle to translate inputs into outputs, affecting their overall innovation performance.

This year, Canada (15<sup>th</sup>), Norway (19<sup>th</sup>) and Uzbekistan (82<sup>nd</sup>) have improved in converting inputs into outputs, no longer underperforming on this metric.

### Box 3 Who leads on unicorns?

A unicorn company is a privately held startup valued at over USD 1 billion.<sup>4</sup> Unicorn companies exhibit rapid growth. They often disrupt industries by introducing innovative products, services or business models that have the potential to reshape entire sectors.

This 2023 edition of the GII includes a new indicator showing the combined valuation of a country's unicorn companies (6.2.2 Unicorn valuation, % GDP; see Appendix III).

According to CBInsights' Tracker of Unicorn companies, as of April 2023, there were 1,206 unicorn companies located in 50 different countries globally.<sup>5</sup> According to a simple count, only five economies host 80 percent of all the world's unicorns, namely, the United States (54 percent), China (14 percent), India (6 percent), the United Kingdom (4 percent) and Germany (2 percent). Out of a total unicorn valuation of USD 3.8 trillion in 2023, US unicorns account of USD 2 trillion – a huge lead – followed by China at USD 736 billion and India at USD 193 billion.

Of the top 25 most valuable unicorn companies and their origin, China comes first, with ByteDance (1<sup>st</sup>, artificial intelligence), followed by SHEIN (3<sup>rd</sup>, e-commerce) and Xiaohongshu (12<sup>th</sup>, e-commerce). The United States follows, with SpaceX (2<sup>nd</sup>, space and telecommunications), Stripe (4<sup>th</sup>, fintech) and Epic Games (7<sup>th</sup>, videogames). Australia has Canva (5<sup>th</sup>, graphic design and software) and Indonesia has J&T Express (13<sup>th</sup>, logistics and delivery).

In the GII, the cumulative value of unicorns is scaled by GDP. After scaling, five economies tie in first place, namely, Estonia, Israel, Lithuania, Senegal and the United States. Estonia leads with Bolt (auto and transportation), Israel with Wiz (cybersecurity), Lithuania has Vinted (e-commerce) and Senegal leads with Wave (fintech). These five top hubs for unicorns are followed by Hong Kong, China (6<sup>th</sup>), the United Kingdom (7<sup>th</sup>), Singapore (8<sup>th</sup>), India (9<sup>th</sup>) and Finland (10<sup>th</sup>).

Plotting an economy's level of development against the cumulative value of its unicorn companies shows whether it is overperforming relative to level of development. In the figure below, most economies in the upper-right quadrant are in the high-income group. The lower-right quadrant also contains high-income economies – largely European – but with a lower concentration of unicorn companies.

Box Figure 1 Unicorn valuation by level of economic development, 2023

Source: Authors, based on CBInsights, 2023 and IMF World Economic Outlook, April 2023.

The economies in the left-hand quadrants are the most interesting cases. Upper-left, middle-income economies China, India and Brazil shine, having a high concentration of unicorn companies relative to their level of development. Lower left are those middle- and low-income economies hosting unicorn companies, even when their valuation is relatively lower. Latin American economies are the most represented, comprising Argentina, Chile, Colombia, Ecuador and Mexico, with leading unicorns Kavak (Mexico, e-commerce), Rappi (Colombia, supply chain) and Uala (Argentina, fintech).

Innovation leaders (top 25) demonstrate balanced and strong performance across all seven pillars. They include France (11<sup>th</sup>), Japan (13<sup>th</sup>), Canada (15<sup>th</sup>), Norway (19<sup>th</sup>), Iceland (20<sup>th</sup>) and Australia (24<sup>th</sup>) (Table 5). Some lower-ranked economies excel in specific innovation pillars, such as Georgia and Rwanda in Institutions (25<sup>th</sup> and 33<sup>rd</sup>, respectively), Trinidad and Tobago in Human capital and research (45<sup>th</sup>), Croatia (44<sup>th</sup>) in Infrastructure (26<sup>th</sup>), and Malaysia and Thailand in Market sophistication (18<sup>th</sup> and 22<sup>nd</sup>, respectively). India and Slovakia excel in Knowledge and technology outputs (22<sup>nd</sup> and 31<sup>st</sup>, respectively), while Türkiye and Latvia shine in Creative outputs (27<sup>th</sup> and 31<sup>st</sup>, respectively). These examples showcase the diverse strengths of economies vibrant in innovation, which can be nurtured to enhance their overall rankings.

## Innovation across the world's regions

### South East Asia, East Asia, and Oceania continues to narrow the gap with Europe, while Central and Southern Asia is getting closer to Latin America and the Caribbean

For yet another year, there are no changes in the rankings of the world's regions, based on an unweighted average GII score of all economies within a region. Northern America and Europe continue to lead, followed by South East Asia, East Asia, and Oceania (SEAO). Northern Africa and Western Asia, Latin America and the Caribbean, Central and Southern Asia, and Sub-Saharan Africa, follow more distantly. However, this year, the distance dividing economies in the SEAO region from those in Europe is on average no more than four GII score points, while economies in Central and Southern Asia are narrowing the gap between them and those in Latin America and the Caribbean.

#### Northern America

Largely driven by the United States, Northern America, comprising the United States and Canada, is the most innovative world region. Canada performs best in Market sophistication (4<sup>th</sup>), Human capital and research (10<sup>th</sup>) and Institutions (14<sup>th</sup>). It continues to lead in indicators Venture capital recipients (1<sup>st</sup>), the impact of its scientific publications (H-Index, 4<sup>th</sup>) and Software spending (5<sup>th</sup>).

#### Europe

Europe still hosts the highest number of innovation leaders among the top 25 – 16 in total, one more than in 2022. Out of 39 European economies covered, 19 move up the rankings this year (seven more than last year), namely, Sweden (2<sup>nd</sup>), Finland (6<sup>th</sup>), Denmark (9<sup>th</sup>), France (11<sup>th</sup>), Estonia (16<sup>th</sup>), Norway (19<sup>th</sup>), Ireland (22<sup>nd</sup>), Belgium (23<sup>rd</sup>), Italy (26<sup>th</sup>), Portugal (30<sup>th</sup>), Lithuania (34<sup>th</sup>), Latvia (37<sup>th</sup>), Greece (42<sup>nd</sup>), Slovakia (45<sup>th</sup>), Romania (47<sup>th</sup>), Serbia (53<sup>rd</sup>), North Macedonia (54<sup>th</sup>), Ukraine (55<sup>th</sup>) and Albania (83<sup>rd</sup>).

Among economies improving, France excels in Intangible assets (3<sup>rd</sup>), Global brands (4<sup>th</sup>), Industrial designs (8<sup>th</sup>) and Global corporate R&D investors (9<sup>th</sup>). Top companies like LVMH, L'Oreal and Christian Dior are contributing to its success. Belgium is performing well in R&D expenditure (6<sup>th</sup>), Researchers (8<sup>th</sup>) and University–industry R&D collaboration (9<sup>th</sup>). Serbia approaches the top 50 with a strong performance in FDI inflows (11<sup>th</sup>) and Labor productivity growth (14<sup>th</sup>).

This year, the Nordic and Baltic economies have made notable progress.

### South East Asia, East Asia, and Oceania

The difference in GII scores between the South East Asia, East Asia, and Oceania (SEAO) region and Europe continues to diminish. Six SEAO economies are world innovation leaders, namely, Singapore (5<sup>th</sup>), the Republic of Korea (10<sup>th</sup>), China (12<sup>th</sup>), Japan (13<sup>th</sup>), Hong Kong, China (17<sup>th</sup>) and Australia (24<sup>th</sup>). These six economies continue to lead in key innovation indicators. China leads globally (1<sup>st</sup>) in Labor productivity growth, Japan in Production and export complexity, the Republic of Korea in PCT patents, Australia in School life expectancy, Hong Kong, China in Global brand value and Singapore in Venture capital received.

Eight economies within the SEAO region improve their rankings this year, with Indonesia (61<sup>st</sup>) making the greatest advance. Indonesia makes marked improvements in innovation outputs, notably in Knowledge creation and Online creativity. It excels in ICT-related indicators and ranks among the top 10 globally for University–industry R&D collaboration (5<sup>th</sup>), State of cluster development (5<sup>th</sup>), Entrepreneurship policies and culture (5<sup>th</sup>) and Finance for startups and scaleups (8<sup>th</sup>).

Mongolia (68<sup>th</sup>), Brunei Darussalam (87<sup>th</sup>) and the Lao People’s Democratic Republic (110<sup>th</sup>) also move up the rankings.

### Central and Southern Asia

Within Central and Southern Asia, India continues to lead, maintaining its 40<sup>th</sup> position overall. India leads the lower middle-income group (Table 3), performing strongly in every innovation pillar except for Infrastructure. It holds top ranking within the Central and Southern Asia region for Human capital and research (48<sup>th</sup>), Business sophistication (57<sup>th</sup>) and Knowledge and technology outputs (22<sup>nd</sup>). Strong indicators include ICT services exports (5<sup>th</sup>), Venture capital received (6<sup>th</sup>), Graduates in science and engineering (11<sup>th</sup>) and Global corporate R&D investors (13<sup>th</sup>).

The Islamic Republic of Iran is 2<sup>nd</sup> within the region once again, at 62<sup>nd</sup> position. It is the regional leader in Market sophistication (19<sup>th</sup>) and Creative outputs (43<sup>rd</sup>). It performs well in Intangible assets (13<sup>th</sup>), ranks 1<sup>st</sup> globally in Trademarks (1<sup>st</sup>) and in the top 15 worldwide in Graduates in science and engineering (3<sup>rd</sup>), Market capitalization (5<sup>th</sup>) and Industrial designs (11<sup>th</sup>).

Kazakhstan (81<sup>st</sup>) takes over 3<sup>rd</sup> position within the region, gaining two ranks and displacing Uzbekistan to 4<sup>th</sup>, which retains its 82<sup>nd</sup> position overall. Only Kazakhstan and Nepal (108<sup>th</sup>) within the region go up the rankings. Kazakhstan tops in Infrastructure (59<sup>th</sup>), thanks to its good performance in Government’s online service (8<sup>th</sup>) and E-participation (15<sup>th</sup>).

### Northern Africa and Western Asia

In Northern Africa and Western Asia, Israel (14<sup>th</sup>) has made significant progress this year and consistently leads the region as a whole. Israel stands out in various areas, holding top position in Market sophistication (11<sup>th</sup>), Business sophistication (6<sup>th</sup>) and Knowledge and technology outputs (5<sup>th</sup>). Furthermore, it distinguishes itself globally as the one country that allocates over 5 percent of GDP to R&D, with a remarkable expenditure of 5.6 percent in 2021.

Saudi Arabia (48<sup>th</sup>) enters the top 50, leading globally in ICT access (7<sup>th</sup>), ICT use (10<sup>th</sup>) and Policies for doing business (16<sup>th</sup>). It also excels for its Global corporate R&D investors (16<sup>th</sup>) and for its Global brand value (18<sup>th</sup>), thanks to leaders Aramco (oil and gas), stc (telecoms) and Al-Rajhi Bank (banking). Oman also takes a big leap forward this year by achieving 69<sup>th</sup> place, and ranks among the top 10 worldwide in Graduates in science and engineering (2<sup>nd</sup>) and Government funding per pupil (9<sup>th</sup>).

An additional seven economies within the region move up the ranking, including notable improvers Georgia (65<sup>th</sup>), Bahrain (67<sup>th</sup>), Jordan (71<sup>st</sup>) and Armenia (72<sup>nd</sup>).

### Latin America and the Caribbean

In Latin America and the Caribbean, Brazil (49<sup>th</sup>) holds top position, followed by Chile (52<sup>nd</sup>), while Mexico maintains 3<sup>rd</sup> place at 58<sup>th</sup>. Uruguay (63<sup>rd</sup>) and El Salvador (95<sup>th</sup>) are the only other countries within the region to have improved their position this year.

Uruguay is the regional leader in Institutions (31<sup>st</sup>), Peru leads in Human capital and research (50<sup>th</sup>), Chile in Infrastructure (52<sup>nd</sup>), Brazil is top of the region for Business sophistication (39<sup>th</sup>) and Knowledge and technology outputs (52<sup>nd</sup>), while Mexico tops in Creative outputs (45<sup>th</sup>).

Brazil (49<sup>th</sup>) climbs up five ranks this year, improving notably in the Innovation Outputs Sub-Index (49<sup>th</sup>). It ranks 22<sup>nd</sup> globally for the valuation of its 16 unicorn companies, representing 1.9 percent of its GDP in 2023, thanks to leaders QuintoAndar (e-commerce), C6 Bank (fintech) and Creditas (fintech) (Box 3). It also improves in Intangible assets (31<sup>st</sup>), ranking 13<sup>th</sup> worldwide for its Trademarks, and in Global brand value (39<sup>th</sup>), thanks to its leading banking brands, Itaú, Bradesco and Banco do Brasil. It ranks among the top 15 globally for Government’s online service (14<sup>th</sup>) and E-participation (11<sup>th</sup>).

Uruguay leads in the top 10 for Policies for doing business (4<sup>th</sup>), ICT services imports (5<sup>th</sup>) and exports (7<sup>th</sup>), and Operational stability for businesses (10<sup>th</sup>). El Salvador can point to its ranking for Firms offering formal training (15<sup>th</sup>) and Trademarks (20<sup>th</sup>).

This year, Brazil and Jamaica continue to perform above expectation for their level of development (Table 4). Conversely, the performance status of Costa Rica (74<sup>th</sup>) has declined, no longer meeting expectation but instead performing below expectation for its level of development.

### Sub-Saharan Africa

In Sub-Saharan Africa, only Mauritius (57<sup>th</sup>) and South Africa (59<sup>th</sup>) rank among the top 60, with South Africa entering this group having gained two ranks since last year. Six of the region's other economies rank within the top 100 globally, namely, Botswana (85<sup>th</sup>), Cabo Verde (91<sup>st</sup>) – making a comeback to the GII in 2023 – Senegal (93<sup>rd</sup>), Namibia (96<sup>th</sup>), Ghana (99<sup>th</sup>) and Kenya (100<sup>th</sup>). Nine of the region's economies move up the GII ranking, including South Africa, Senegal, Rwanda (103<sup>rd</sup>), Togo (114<sup>th</sup>) and Mauritania (127<sup>th</sup>).

Botswana (85<sup>th</sup>) continues moving ahead, gaining one rank and retaining 2<sup>nd</sup> position within the region. South Africa (59<sup>th</sup>) – moving ahead by two ranks and entering the top 60 – Madagascar (107<sup>th</sup>) and Burundi (130<sup>th</sup>) are also innovation overperformers this year. Other notable improvers within the region are Nigeria (109<sup>th</sup>), Togo (114<sup>th</sup>), Benin (120<sup>th</sup>) and Guinea (128<sup>th</sup>).

Mauritius ranks highest within the region in Institutions (26<sup>th</sup>), Human capital and research (64<sup>th</sup>), Market sophistication (24<sup>th</sup>) and Creative outputs (57<sup>th</sup>). It leads worldwide in Venture capital investors (1<sup>st</sup>) and ranks 5<sup>th</sup> in Venture capital received. Cabo Verde leads the region in Infrastructure (64<sup>th</sup>) and performs well in indicators Gross capital formation (3<sup>rd</sup>), Expenditure on education (13<sup>th</sup>) and FDI inflows (17<sup>th</sup>). Botswana tops in Business sophistication (56<sup>th</sup>), and performs well in Loans from microfinance institutions (12<sup>th</sup>).

South Africa heads the region in Knowledge and technology outputs (56<sup>th</sup>), thanks to its good performance in Software spending (28<sup>th</sup>), Patents by origin (34<sup>th</sup>), PCT patents (40<sup>th</sup>) and for the valuation of its two unicorn companies (37<sup>th</sup>), Promasidor Holdings (consumer and retail) and Cell C (mobile and telecommunications).

Finally, Senegal gains six ranks this year, improving notably in Knowledge and technology outputs (63<sup>rd</sup>). It ranks 1<sup>st</sup> in the world for the valuation of its unicorn company Wave (fintech), sharing top place with high-income economies Estonia, Israel, Lithuania and the United States. It also performs well in Gross capital formation (8<sup>th</sup>), Loans from microfinance institutions (10<sup>th</sup>), FDI inflows (13<sup>th</sup>) and Venture capital received (19<sup>th</sup>).

---

#### Box 4 Innovation as the driver of the United Nations Sustainable Development Goals

The 2030 Agenda for Sustainable Development, with its 17 Sustainable Development Goals (SDGs), has set an ambitious agenda. While technology and innovation are a recognized key facilitator in achieving all related targets, innovation is a specific policy target in its own right. SDG 9 specifically targets innovation-related goals, in particular target 9.5, which promotes increasing R&D expenditure as a proportion of GDP (9.5.1), and increasing the number of researchers per million inhabitants (9.5.2), both of which are also important GII indicators.<sup>6</sup>

In this context, the GII has been recognized an authoritative benchmark for measuring innovation within the 2019 and 2021 UN General Assembly resolutions on Science, Technology and Innovation for Sustainable Development. Events such as the eighth annual Multi-Stakeholder Forum on Science, Technology and Innovation for the SDGs (STI Forum) held this year in May 2023 concern the role that can be played by innovation in accelerating the post-pandemic recovery.<sup>7</sup>

Looking forward, around the time of the GII launch in September 2023, an SDG Summit is due to be convened during the High-Level Week of the UN General Assembly marking the mid-way point in the agenda – which has seven more years to run – and to accelerate action during the lead up to 2030.<sup>8</sup>

---

## Conclusion

Several key insights emerge from this year's GII report.

- The global innovation landscape is changing at this time of pandemic and recovery and geopolitical upheaval, not only within the group of leading innovation economies, but more widely. As a result, some of the changes in GII rank this year may partly reflect short rather than longer term trends. The most notable changes to the innovation landscape are as follows:
  - There has been a shift within this year's top 20 innovators, with Sweden, Singapore, Finland, Denmark, France and Israel (in order of their ranking) moving up the ranking, and generally a strong showing by the Nordic and Baltic countries.
  - There is a mixed picture for leading emerging economies, with Indonesia rising fast over recent years, the Philippines and Viet Nam progressing again and India stable, but with China, Türkiye and the Islamic Republic of Iran falling back slightly, possibly in part due to recent COVID-19 induced effects.
  - India, the Republic of Moldova and Viet Nam have overperformed on innovation relative to development for a 13<sup>th</sup> year in a row, with Indonesia, Uzbekistan and Pakistan maintaining the overperformer status they first achieved in 2022, and Brazil overperforming on innovation relative to development for a third consecutive year.
  - There are some systematically positive innovation ranking developments in the Middle East, with the United Arab Emirates (UAE) close to the top 30, and Saudi Arabia, Qatar, Bahrain, Oman and other neighboring countries progressing up the rankings.
  - Mauritius and South Africa are leading Sub-Sahara Africa, with solid positions in the GII top 60, and a total of five economies within the region overperforming on innovation, with Rwanda having done so for the longest.
- Similar to last year, and excepting those economies just mentioned, more middle- and low-income economies would benefit from more a systematic and gradual improvement to the set-up and performance of their innovation ecosystem.
- Today, more than ever, pandemic impacts, downward pressure on risk capital, high interest rates and high debt levels, together with the effects of disruption to global supply chains on nascent innovation systems in middle- and low-income economies, all need close monitoring. This is to preserve the many positive changes that have come about over the last two decades in terms of getting innovation systems and policies onto the agenda of developing countries' policymakers, legislators and innovation actors. Closely monitoring the evolution of innovation is key also in the SDG context (see Box 4).

Future editions of the GII will continue to track developments closely – and innovation impacts, in particular – with the aim of fostering a better understanding of innovation and its measurement. Future editions will tell us which of the GII performance changes at the country or regional level listed above are transitory and which longer term in nature.

## Notes

- 1 It is difficult to determine whether this decline has been caused directly by the COVID-19 pandemic. However, it is worth noting that approximately 93 percent of the data points used for China in this year's model span the period from 2020 to 2023.
- 2 See [www.wipo.int/ipstats](http://www.wipo.int/ipstats).
- 3 The study reviews the applicability of the GII framework to the development of sub-national innovation metrics. It analyses the existing sub-national innovation indices of WIPO Member States who have pioneered this field. It also determines which future innovation metrics are applicable to the measurement of innovation at the sub-national level, particularly those exploiting "big data" and new computational methods. See WIPO (2023a).
