We are pleased to present the 12th edition of the Global Innovation Index (GII). The special theme for this edition is Creating Healthy Lives—The Future of Medical Innovation.

Over the last two centuries, improvements in healthcare have prompted a sustained increase in life expectancy and in the quality of life, resulting in substantial contributions to economic growth. Medical innovation has largely contributed to this progress.

As we look into the future, new technologies and non-technological innovations will likely continue to enrich the provision of healthcare at a rapid pace. Artificial intelligence, genomics, stem cell research, big data, and mobile health applications will open doors to improved health. Likewise, novelties such as the delivery of medicines via drones have potential for rural and low-resource contexts in developing countries.

Focusing on the next two decades, the GII 2019 will shed light on the role of medical innovation as it shapes the future of healthcare. The insights shared within the report show that we have an exciting opportunity ahead of us. In addition to the theme, and as every year, the GII report analyzes global innovation trends and the performance of approximately 130 economies.

With this in mind, however, the GII is only as good as its data ingredients. The current state of innovation metrics is improving. Yet, despite this progress, the figures available to assess innovation outputs and impacts—a topic of critical importance—remain poor. Similarly, sound metrics on key components of innovation systems, such as the state of entrepreneurship, the availability of venture capital, the nature of innovation linkages, or the degree to which innovations are successfully commercialized, are lacking.

To improve the state of innovation metrics, the GII will continue to be a laboratory for measuring and analyzing emerging innovation data. Trial and error will be required to provide the most accurate assessment of perpetually changing innovation contexts. We appreciate the feedback we continue to receive from innovation experts and decision-makers, whose insights contribute to how we refine the GII methodology.

For this GII edition, we thank our Knowledge Partners; the Confederation of Indian Industry (CII), Dassault Systèmes, The 3DEXPERIENCE Company, the National Confederation of Industry Brazil (CNI), and the Brazilian Service of Support to Micro and Small Enterprises (SEBRAE) for their support. Likewise, we recognize the contributions of the GII’s prominent Advisory Board members.

Finally, we express our sincere appreciation for the annual audits and technical assistance provided by the Competence Centre on Composite Indicators and Scoreboards (COIN) of the Joint Research Centre at the European Commission.
