## **Issue 1**

Comment: While I agree with the issue as well as questions raised, I would recommend the addition of a question in paragraph 7 which deals with cases of inventions autonomously generated by AI:

“In cases where AI algorithms autonomously creates an invention through the use of data sets fed to it or through data set derived from various sources on the internet, who should be determined as the inventor? The AI, the creator of the AI or the sources through which information used in the creation of the work were derived”.

## **Issue 7: Infringement and Exceptions**

I recommend that the following questions be raised on this issue:

- a) Is there a breach of copyright where the use of the data subsisting in copyright works is autonomously accessed by machine learning algorithm in the creation of a work?
- b) Who bears liability for the breach of copyright where the use of the data subsisting in copyright works is autonomously accessed by machine learning algorithm in the creation of a work?
