Topic: Artificial intelligence

Sub-topic: Impact of AI on IP Policy: Call for Comments

Question: My argument is simple. Most AI algorithms define a problem and then solve it computationally by maximizing a function. In essence, this is a simple mathematical optimization process. In several patent laws, a patent can be attributed if the technology is non-obvious.

In the case of AI generated content and technologies, the solution should be considered obvious as it is the optimum of a mathematical function.
