

## **Impact of Artificial Intelligence on IP Policy: Call for Comments**

I believe that AI/ Intellectual Property should be an open source tool because:

1. Part of AI is constituted/made of algorithms of any sort
2. As far as I know it is difficult to patent an algorithm
3. AI algorithms are made of 'source codes' that mostly belong to the public domain and /or licensed as open source matter
4. The consequence of adopting the suggested 'policy' may energize even SMEs to be very creative that may benefit in long term the society even in poor countries
