GII 2022: What is the future of innovation-driven growth?

The Global Innovation Index 2022

The *Global Innovation Index 2022 (GII)* tracks global innovation trends against the background of an ongoing COVID-19 pandemic, slowing productivity growth and other ongoing challenges.

The *GII* reveals the most innovative economies in the world, ranking the innovation performance of 132 economies, highlighting their innovation strengths and weaknesses, and pinpointing any gaps in their innovation metrics.

This 2022 edition of the *GII* focuses on the predicted effect of innovation in three key areas: productivity, economic growth and the well-being of society over the coming decades. The report asks: Is stagnation and low productivity growth here to stay, or are we about to enter a new era, where the Digital Age and Deep Science reinvigorate innovation and bring about an economic and productivity uplift?

Since 2007, the *GII* has been an invaluable reference for countries wanting to develop new innovation and economic policy strategies and a tool for improving innovation metrics. The United Nations General Assembly has recognized the *GII* as an authoritative benchmark for measuring innovation within its 2019 and 2021 resolutions on Science, Technology and Innovation for Sustainable Development.

The *GII* is published in partnership with the Portulans Institute and supported by Corporate Network partners: the Confederation of Indian Industry (CII), the Brazilian National Confederation of Industry (CNI), Ecopetrol, and the Turkish Exporters Assembly (TİM), together with its Academic Network partners and the *GII* Advisory Board.

More information on the *GII* is at
