

ASEAN PATENTSCOPE

Jurisdiction - General Information

ASEAN Patentscope is not an authority issuing patents but a regional IP information platform.

ASEAN Patentscope was established in 2017 by ASEAN, the Association of Southeast Asian Nations (Brunei Darussalam, Cambodia, Indonesia, Lao People's Democratic Republic, Malaysia, Myanmar, Philippines, Singapore, Thailand and Viet Nam), with the collaboration of the patent offices of the member countries and the support of the WIPO. It currently provides an access point for searching public patent documents from all the jurisdictions members with the exception of Myanmar.

Information about the project can be found [here](#).

Online Patent Register and Online Gazette

ASEAN Patentscope is not an **Online Register** as such, but it is a [patent database](#). More information about the coverage of ASEAN is available [here](#).

Features and search functionalities

On ASEAN Patentscope, it is possible to search for patents on an Arabic, English, French, Indonesian and Japanese interface by **PCT Application/Publication Number**, **Applicant/Inventor Name**, and **Priority Data**, and to retrieve information on **Legal Status** and **PCT National Phase Entry**.

Full publications of the PCT entered in a member country can be retrieved through a link to the WIPO Patentscope included in the bibliographic data of the document.

Additional Information

Particularities of patent protection in the jurisdictions covered by the ASEAN Patentscope platform

With regard to **Supplementary Protection Certificates (SPCs)**, referral is made to national regulations.

Myanmar is the only ASEAN country which is not currently a Contracting Party to the Patent Cooperation Treaty (PCT).

Search tips

The platform can be searched through a term assisted, single search line, or through an advanced search page offering a large number of searchable fields.

In addition, by clicking on one country name on the right side of the home page, the complete list of that country national patents covered by the platform will be shown.

Search by national number in the field "Filing No." must be done without including the country code (e.g. input PI 2018001535 to retrieve the application filed in Malaysia).

National applications deriving from a PCT should be preferably searched by **PCT Application Number**, e.g., PCT/US2016/016176 will retrieve national applications filed in Brunei with n. N/2017/0056, in Indonesia with n. P00201705146 and in Malaysia with n. PI 2017702697, because not all records include the **PCT Publication Number**, therefore searching by n. WO/2016/137688 corresponding to the above mentioned PCT application will retrieve only the Indonesian application n. P00201705146.

Basic legal status information is included in the bibliographic record, e.g. "Registered" for Brunei application n. N/2017/0056, or by clicking on the tab "STATUS".

Search results can be viewed in a list or in a table format. Texts are displayed in the original language (Thai records are shown in Thai characters), for some documents however an English abstract is also provided and for PCT entered in a member country an English abstract is always available.

In the bibliographic record by clicking on the Applicant or the Inventor names a pop-up window opens showing a list of their patents, hyperlinked to the corresponding record.
