# **CONTENTS OF SECTION** (References and notes omitted)

Subsect	tion ENGINES OR PUMPS	F02P	Ignition, other than compression ignition, for internal-combustion engines; Testing of ignition timing in compression-ignition engines
F01	MACHINES OR ENGINES IN GENERAL; ENGINE PLANTS IN GENERAL; STEAM ENGINES	F03	MACHINES OR ENGINES FOR LIQUIDS;
F01B	Machines or engines, in general or of positive-displacement type, e.g. steam engines6	FU3	WIND, SPRING, OR WEIGHT MOTORS; PRODUCING MECHANICAL POWER OR A REACTIVE PROPULSIVE THRUST, NOT
F01C	Rotary-piston or oscillating-piston machines or engines8		OTHERWISE PROVIDED FOR47
F01D	Non-positive-displacement machines or engines, e.g. steam turbines	F03B F03C	Machines or engines for liquids
F01K	Steam engine plants; Steam accumulators; Engine	F03D	Wind motors49
	plants not otherwise provided for; Engines using special working fluids or cycles12	F03G	Spring, weight, inertia, or like motors; Mechanical-power-producing devices or mechanisms,
F01L	Cyclically operating valves for machines or engines15		not otherwise provided for or using energy sources not otherwise provided for
F01M	Lubricating of machines or engines in general; Lubricating internal-combustion engines; Crankcase ventilating	F03H	Producing a reactive propulsive thrust, not otherwise provided for51
F01N	Gas-flow silencers or exhaust apparatus for machines or engines in general; Gas-flow silencers or exhaust apparatus for internal-combustion	F04	POSITIVE-DISPLACEMENT MACHINES FOR
F01P	engines		LIQUIDS; PUMPS FOR LIQUIDS OR ELASTIC FLUIDS51
1 011	of internal-combustion engines20	F04B	Positive-displacement machines for liquids; Pumps51
		F04C	Rotary-piston, or oscillating-piston, positive-displacement machines for liquids; Rotary-piston, or oscillating-piston, positive-displacement pumps55
F02	COMBUSTION ENGINES; HOT-GAS OR	F04D	Non-positive-displacement pumps59
F02B	COMBUSTION-PRODUCT ENGINE PLANTS21 Internal-combustion piston engines; Combustion engines in general	F04F	Pumping of fluid by direct contact of another fluid or by using inertia of fluid to be pumped;
F02C	Gas-turbine plants; Air intakes for jet-propulsion plants; Controlling fuel supply in air-breathing jet-propulsion plants		Siphons61
F02D	Controlling combustion engines30	Subsec	tion ENGINEERING IN GENERAL
F02F	Cylinders, pistons, or casings for combustion engines; Arrangements of sealings in combustion engines		
F02G	Hot-gas or combustion-product positive- displacement engine plants; Use of waste heat of	F15	FLUID-PRESSURE ACTUATORS; HYDRAULICS OR PNEUMATICS IN GENERAL63
	combustion engines, not otherwise provided for33	F15B	Systems acting by means of fluids in general; Fluid-pressure actuators, e.g. servomotors;
F02K	Jet-propulsion plants34		Details of fluid-pressure systems, not otherwise
F02M	Supplying combustion engines in general with combustible mixtures or constituents thereof36	71.50	provided for
F02N	Starting of combustion engines; Starting aids for	F15C	Fluid-circuit elements predominantly used for computing or control purposes65
	such engines, not otherwise provided for44	F15D	Fluid dynamics, i.e. methods or means for influencing the flow of gases or liquids66

F16	ENGINEERING ELEMENTS OR UNITS; GENERAL MEASURES FOR PRODUCING AND MAINTAINING EFFECTIVE FUNCTIONING OF MACHINES OR INSTALLATIONS;	F21L F21S	portable or specially adapted for transportation
F16B	THERMAL INSULATION IN GENERAL	F21V	Functional features or details of lighting devices or systems thereof; Structural combinations of lighting devices with other articles, not
	elements or machine parts together, e.g. nails, bolts, circlips, clamps, clips or wedges; Joints or jointing	F21W	otherwise provided for
F16C	Shafts; Flexible shafts; Mechanical means for transmitting movement in a flexible sheathing; Elements of crankshaft mechanisms; Pivots; Pivotal connections; Rotary engineering elements other	F21Y	Indexing scheme associated with subclasses131
	than gearing, coupling, clutch or brake elements; Bearings71	<b>F22</b> F22B	STEAM GENERATION131 Methods of steam generation; Steam boilers132
F16D	Couplings for transmitting rotation; Clutches; Brakes	F22D	Preheating, or accumulating preheated, feed-water; Feed-water supply; Controlling water level;
F16F	Springs; Shock-absorbers; Means for damping vibration84		auxiliary devices for promoting water circulation within boilers135
F16G	Belts, cables, or ropes, predominantly used for driving purposes; Chains; Fittings predominantly used therefor	F22G	Superheating of steam
F16H F16J	Gearing	F23	COMBUSTION APPARATUS; COMBUSTION PROCESSES137
F16K	Valves; Taps; Cocks; Actuating-floats; Devices for venting or aerating	F23B	Methods or apparatus for combustion using only solid fuel
F16L	Pipes; Joints or fittings for pipes; Supports for pipes, cables or protective tubing; Means for	F23C	Methods or apparatus for combustion using fluid fuel or solid fuel suspended in air138
	thermal insulation in general	F23D	Burners
F16M	Frames, casings, or beds, of engines or other machines or apparatus, not specific to an engine,	F23G	Cremation furnaces; Consuming waste or low grade fuels by combustion
	machine, or apparatus provided for elsewhere; Stands or supports116	F23H F23J	Grates; Cleaning or raking grates143 Removal or treatment of combustion products or
F16N	Lubricating117		combustion residues; Flues144
F16P	Safety devices in general119	F23K	Feeding fuel to combustion apparatus144
F16S	Constructional elements in general; Structures built-up from such elements, in general120	F23L	Supplying air or non-combustible liquids or gases to combustion apparatus in general; Valves or
F16T	Steam traps or like apparatus for draining-off liquids from enclosures predominantly containing gases or vapours		dampers specially adapted for controlling air supply or draught in combustion apparatus; Inducing draught in combustion apparatus; Tops for chimneys or ventilating shafts; Terminals for flues
F17	STORING OR DISTRIBUTING GASES OR LIQUIDS121	F23M	Casings, linings, walls or doors specially adapted for combustion chambers, e.g. firebridges; Devices for deflecting air, flames or combustion products
F17B F17C	Gas-holders of variable capacity		in combustion chambers; Safety arrangements specially adapted for combustion apparatus;  Details of combustion chambers, not otherwise provided for
	from vessels, compressed, liquefied, or solidified	F23N	Regulating or controlling combustion146
	gases	F23Q	Ignition; Extinguishing devices147
F17D	Pipe-line systems; Pipe-lines	F23R	Generating combustion products of high pressure or high velocity, e.g. gas-turbine combustion chambers
Subsec	tion <u>LIGHTING</u> ; <u>HEATING</u>		
		F24	HEATING; RANGES; VENTILATING149
F21	LIGHTING	F24B	Domestic stoves or ranges for solid fuels; Implements for use in connection with stoves or
F21H	Incandescent mantles; Other incandescent bodies heated by combustion124	F24C	ranges
F21K	Light sources not otherwise provided for 124	1240	domestic stoves or ranges, of general application150

F24D	Domestic- or space-heating systems, e.g. central heating systems; Domestic hot-water supply systems; Elements or components therefor151	F28D	Heat-exchange apparatus, not provided for in another subclass, in which the heat-exchange media do not come into direct contact; Heat storage
F24F	Air-conditioning; Air-humidification; Ventilation; Use of air currents for screening152	F28F	plants or apparatus in general169  Details of heat-exchange or heat-transfer
F24H	Fluid heaters, e.g. water or air heaters, having		apparatus, of general application170
F24J	heat-generating means, in general155  Production or use of heat not otherwise provided	F28G	Cleaning of internal or external surfaces of heat- exchange or heat-transfer conduits, e.g. water
	for156		tubes of boilers172
F25	REFRIGERATION OR COOLING; COMBINED HEATING AND REFRIGERATION SYSTEMS; HEAT PUMP SYSTEMS; HEAT A COLOR OF THE ACCURATION OF THE ACC	Subsec	tion WEAPONS; BLASTING
	STORAGE OF ICE; LIQUEFACTION OR SOLIDIFICATION OF GASES157	F41	WEAPONS173
F25B	Refrigeration machines, plants, or systems; Combined heating and refrigeration systems; Heat pump systems	F41A	Functional features or details common to both smallarms and ordnance, e.g. cannons; Mountings for smallarms or ordnance
F25C	Production, working, storing or distribution of ice	F41B	Weapons for projecting missiles without use of explosive or combustible propellant charge; Weapons not otherwise provided for
F25D	Refrigerators; Cold rooms; Ice-boxes; Cooling or freezing apparatus not covered by any other subclass	F41C	Smallarms, e.g. pistols or rifles; Accessories therefor
F25J	Liquefaction, solidification, or separation of gases or gaseous mixtures by pressure and cold treatment	F41F	Apparatus for launching projectiles or missiles from barrels, e.g. cannons; Launchers for rockets or torpedoes; Harpoon guns
	201	F41G	Weapon sights; Aiming183
Eac	DDWING 469	F41H	Armour; Armoured turrets; Armoured or armed vehicles; Means of attack or defence, e.g.
<b>F26</b> F26B	DRYING162 Drying solid materials or objects by removing	F41J	camouflage, in general
F20D	liquid therefrom162	1413	Targets, Target Tariges, Duriet Catchers
		F42	AMMUNITION; BLASTING180
F27	FURNACES; KILNS; OVENS; RETORTS164	F42B	Explosive charges, e.g. for blasting; Fireworks;
F27B	Furnaces, kilns, ovens, or retorts in general; Open sintering or like apparatus164	F42C	Ammunition
F27D	Details or accessories of furnaces, kilns, ovens,	F42D	Blasting
	or retorts, in so far as they are of kinds occurring in more than one kind of furnace167		
		F99	SUBJECT MATTER NOT OTHERWISE PROVIDED FOR IN THIS SECTION194
F28	HEAT EXCHANGE IN GENERAL168	F99Z	Subject matter not otherwise provided for in this
F28B	Steam or vapour condensers		section19
F28C	Heat-exchange apparatus, not provided for in another subclass, in which the heat-exchange media come into direct contact without chemical		

### **ENGINES OR PUMPS**

### Note(s)

Guide to the use of this subsection (classes F01-F04)

The following notes are meant to assist in the use of this part of the classification scheme.

- 1. In this subsection, subclasses or groups designating "engines" or "pumps" cover methods of operating the same, unless otherwise specifically provided for.
- 2. In this subsection, the following terms or expressions are used with the meanings indicated:
  - "engine" means a device for continuously converting fluid energy into mechanical power. Thus, this term includes, for
    example, steam piston engines or steam turbines, <u>per se</u>, or internal-combustion piston engines, but it excludes single-stroke
    devices. "Engine" also includes the fluid-motive portion of a meter unless such portion is particularly adapted for use in a
    meter;
  - "pump" means a device for continuously raising, forcing, compressing, or exhausting fluid by mechanical or other means.
     Thus, this term includes fans or blowers;
  - "machine" means a device which could equally be an engine and a pump, and not a device which is restricted to an engine or
    one which is restricted to a pump;
  - "positive displacement" means the way the energy of a working fluid is transformed into mechanical energy, in which variations of volume created by the working fluid in a working chamber produce equivalent displacements of the mechanical member transmitting the energy, the dynamic effect of the fluid being of minor importance, and <u>vice versa</u>;
  - "non-positive displacement" means the way the energy of a working fluid is transformed into mechanical energy, by transformation of the energy of the working fluid into kinetic energy, and <u>vice versa</u>;
  - "oscillating-piston machine" means a positive-displacement machine in which a fluid-engaging work-transmitting member oscillates. This definition applies also to engines and pumps;
  - "rotary-piston machine" means a positive-displacement machine in which a fluid-engaging work-transmitting member rotates about a fixed axis or about an axis moving along a circular or similar orbit. This definition applies also to engines and pumps;
  - "rotary piston" means the work-transmitting member of a rotary-piston machine and may be of any suitable form, e.g., like a toothed gear;
  - "cooperating members" means the "oscillating piston" or "rotary piston" and another member, e.g., the working-chamber wall, which assists in the driving or pumping action;
  - "movement of the co-operating members" is to be interpreted as relative, so that one of the "co-operating members" may be stationary, even though reference may be made to its rotational axis, or both may move;
  - "teeth or tooth equivalents" include lobes, projections or abutments;
  - "internal-axis type" means that the rotational axes of the inner and outer co-operating members remain at all times within the outer member, e.g., in a similar manner to that of a pinion meshing with the internal teeth of a ring gear;
  - "free piston" means a piston of which the length of stroke is not defined by any member driven thereby;
  - "cylinders" means positive-displacement working chambers in general. Thus, this term is not restricted to cylinders of circular cross-section;
  - "main shaft" means the shaft which converts reciprocating piston motion into rotary motion or vice versa;
  - "plant" means an engine together with such additional apparatus as is necessary to run the engine. For example, a steam engine plant includes a steam engine and means for generating the steam;
  - "working fluid" means the driven fluid in a pump or the driving fluid in an engine. The working fluid can be in a compressible, gaseous state, called elastic fluid, e.g. steam; in a liquid state; or in a state where there is coexistence of an elastic fluid and liquid phase.
  - "steam" includes condensable vapours in general, and "special vapour" is used when steam is excluded;
  - "reaction type" as applied to non-positive-displacement machines or engines means machines or engines in which pressure/velocity transformation takes place wholly or partly in the rotor. Machines or engines with no, or only slight, pressure/velocity transformation in the rotor are called "impulse type".
- 3. In this subsection:
  - cyclically operating valves, lubricating, gas-flow silencers or exhaust apparatus, or cooling are classified in subclasses F01L, F01M, F01N, F01Pirrespective of their stated application, unless their classifying features are peculiar to their application, in which case they are classified only in the relevant subclass of classes F01-F04;
  - lubricating, gas-flow silencers or exhaust apparatus, or cooling of machines or engines are classified in subclasses F01M, F01N, F01P except for those peculiar to steam engines which are classified in subclass F01B.
- 4. For use of this subsection with a good understanding, it is essential to remember, so far as subclasses F01B, F01C, F01D, F03B, and F04B, F04C, F04D, which form its skeleton, are concerned:
  - the principle which resides in their elaboration,
  - the classifying characteristics which they call for, and
  - their complementarity.
    - i. Principle

This concerns essentially the subclasses listed above. Other subclasses, notably those of class F02, which cover better-defined matter, are not considered here.

Each subclass <u>covers</u> fundamentally a genus of apparatus (engine or pump) and by extension covers equally "machines" of the same kind. Two different subjects, one having a more general character than the other, are thus covered by the same subclass.

Subclasses F01B, F03B, F04B, beyond the two subjects which they cover, have further a character of generality in relation to other subclasses concerning the different species of apparatus in the genus concerned.

This generality applies as well for the two subjects dealt with, without these always being in relation to the same subclasses.

Thus, subclass F03B, in its part dealing with "machines", should be considered as being the general class relating to subclasses F04B, F04C, and in its part dealing with "engines" as being general in relation to subclass F03C.

### ii. Characteristics

- The principal classifying characteristic of the subclass is that of genera of apparatus, of which there are three
  possible:
  - Machines; engines; pumps.
- As stated above, "machines" are always associated with one of the other two genera. These main genera are subdivided according to the general principles of operation of the apparatus:
   Positive displacement; non-positive displacement.
- The positive displacement apparatus are further subdivided according to the ways of putting into effect the
  principle of operation, that is, to the kind of apparatus:
  Simple reciprocating piston; rotary or oscillating piston; other kind.
- d. Another classifying characteristic is that of the working fluid, in respect of which three kinds of apparatus are possible, namely:
  - Liquid and elastic fluid; elastic fluid; liquid.

### iii. Complementarity

This resides in association of pairs of the subclasses listed above, according to the characteristics under consideration in respect of kind of apparatus or working fluid.

The subclasses concerned with the various principles, characteristics and complementarity are shown in the subsection index below.

### It is seen from this index that:

For the same kind of apparatus in a given genus, the characteristics of "working fluid" associates:

F01B and F04B to Machines

F01C and F04C to Machines

F01D and F03B to Machines

F01B and F03C to Engines

F01C and F03C to Engines

F01D and F03B to Engines

 For the same kind of working fluid, the "apparatus" characteristic relates subclasses in the same way as considerations of relative generality.

### **Class index**

### **MACHINES** positive displacement rotary or oscillating piston liquid only......F04C reciprocating piston or other non-positive displacement liquid only......F03B **ENGINES** positive displacement rotary or oscillating piston liquid only.......F03C reciprocating piston or other liquid only......F03C non-positive displacement liquid only......F03B **PUMPS** positive displacement

#### F01 MACHINES OR ENGINES IN GENERAL; ENGINE PLANTS IN GENERAL; STEAM ENGINES

F01B MACHINES OR ENGINES, IN GENERAL OR OF POSITIVE-DISPLACEMENT TYPE, e.g. STEAM ENGINES (of rotary-piston or oscillating-piston type F01C; of non-positive-displacement type F01D; combustion engines F02; internalcombustion aspects of reciprocating-piston engines F02B 57/00, F02B 59/00; machines for liquids F03, F04; crankshafts, crossheads, connecting-rods F16C; flywheels F16F; gearings for interconverting rotary motion and reciprocating motion in general F16H; pistons, piston-rods, cylinders, for engines in general F16J)

### Note(s)

- This subclass covers, with the exception of the matter provided for in subclasses F01C-F01P:
  - engines for elastic fluids, e.g. steam engines;
  - engines for liquids and elastic fluids;
  - machines for elastic fluids;
  - machines for liquids and elastic fluids.
- Attention is drawn to the Notes preceding class F01, especially as regards the definitions of "steam" and "special vapour".

### Subclass index

<b>MACHINES</b>	OR	<b>ENGINES</b>
MILICITITATIO	OIL	LINGINES

With reciprocating pistons characterised by

number or relative disposition of cylinders	1/00
disposition of cylinder axes relative to main shaft	3/00, 5/00
pistons reciprocating in same or coaxial cylinders; piston-main-shaft connections other than covere	ed
above	7/00, 1/08, 9/00
no rotary main shaft	11/00
rotary or other movement of cylinders	13/00, 15/00
uniflow principle	17/00
With positive displacement of flexible-wall type	19/00
COMBINATIONS OR ADAPTATIONS OF MACHINES OR ENGINES	21/00, 23/00
REGULATING, CONTROLLING, SAFETY MEANS; STARTING	25/00, 27/00
OTHER CHARACTERISTICS; DETAILS, ACCESSORIES	29/00, 31/00

1/00	Reciprocating-piston machines or engines		
	characterised by number or relative disposition of		
	cylinders or by being built-up from separate		
	cylinder-crankcase elements (F01B 3/00, F01B 5/00		
	take precedence) [1, 2, 2006.01]		

- 1/01 with one single cylinder [2, 2006.01]
- 1/02 with cylinders all in one line [1, 2006.01]
- 1/04 with cylinders in V-arrangement [1, 2006.01]
- 1/06 with cylinders in star or fan arrangement [1, 2006.01]
- with cylinders arranged oppositely relative to main 1/08 shaft and of "flat" type [1, 2006.01]
- with more than one main shaft, e.g. coupled to 1/10 common output shaft (combinations of two or more machines or engines F01B 21/00) [1, 2006.01]
- Separate cylinder-crankcase elements coupled 1/12 together to form a unit [1, 2006.01]

### 3/00 Reciprocating-piston machines or engines with cylinder axes coaxial with, or parallel or inclined to, main shaft axis [1, 2006.01]

- with wobble-plate [1, 2006.01] 3/02
  - · the piston motion being transmitted by curved surfaces [1, 2006.01]
- by multi-turn helical surfaces and automatic 3/06 reversal [1, 2006.01]
- 3/08 · the helices being arranged on the pistons [1, 2006.01]
- · Control of working-fluid admission or discharge 3/10 peculiar thereto (suitable for more general application F01L) [1, 2006.01]

- 5/00 Reciprocating-piston machines or engines with cylinder axes arranged substantially tangentially to a circle centred on main shaft axis [1, 2006.01]
- 7/00 Machines or engines with two or more pistons reciprocating within same cylinder or within essentially coaxial cylinders (in opposite arrangement relative to main shaft F01B 1/08) [1, 2006.01]
- 7/02 • with oppositely reciprocating pistons [1, 2006.01]
- acting on same main shaft [1, 2006.01] 7/04
- 7/06 using only connecting-rods for conversion of reciprocatory into rotary motion or vice versa [1, 2006.01]
- 7/08 with side rods [1, 2006.01]
- having piston-rod of one piston passed 7/10 through other piston [1, 2006.01]
- 7/12 • • using rockers and connecting-rods [1, 2006.01]
- 7/14 • • acting on different main shafts [1, 2006.01]
- 7/16 · with pistons synchronously moving in tandem arrangement [1, 2006.01]
- 7/18 · with differential piston (F01B 7/20 takes precedence) [1, 2006.01]
- 7/20 with two or more pistons reciprocating one within another, e.g. one piston forming cylinder of the other [1, 2006.01]
- 9/00 Reciprocating-piston machines or engines characterised by connections between pistons and main shafts and not specific to groups F01B 1/00-F01B 7/00 (connections disengageable during idling F01B 31/24) [1, 2006.01]

3/04

9/02	• with crankshaft [1, 2006.01]	23/08	<ul> <li>Adaptations for driving, or combinations with,</li> </ul>
9/04	<ul> <li>with rotary main shaft other than crankshaft [1, 2006.01]</li> </ul>	23/10	<ul><li>pumps [1, 2006.01]</li><li>Adaptations for driving, or combinations with,</li></ul>
9/06	the piston motion being transmitted by curved		electric generators [1, 2006.01]
0 / 00	surfaces [1, 2006.01]	23/12	<ul> <li>Adaptations for driving rolling mills or other heavy reversing machinery [1, 2006.01]</li> </ul>
9/08	• • with ratchet and pawl [1, 2006.01]		reversing machinery [1, 2000.01]
11/00	Reciprocating-piston machines or engines without rotary main shaft, e.g. of free-piston type [1, 2006.01]	25/00	<b>Regulating, controlling, or safety means</b> (regulating controlling in general G05) <b>[1, 2006.01]</b>
11/02	• Equalising or cushioning devices [1, 2006.01]	25/02	<ul> <li>Regulating or controlling by varying working-fluid</li> </ul>
11/04	Engines combined with reciprocatory driven devices,		admission or exhaust, e.g. by varying pressure or quantity (distributing or expansion valve gear
	e.g. hammers (with pumps F01B 23/08; predominating aspects of driven devices, <u>see</u> the		F01L) [1, 2006.01]
	relevant classes for the devices) [1, 2006.01]	25/04	<ul> <li>Sensing elements [1, 2006.01]</li> </ul>
11/06	<ul> <li>for generating vibration only [1, 2006.01]</li> </ul>	25/06	• • • responsive to speed [1, 2006.01]
11/08	• with direct fluid transmission link (F01B 11/02 takes	25/08	• • Final actuators [1, 2006.01]
	precedence) [1, 2006.01]	25/10	• • • Arrangements or adaptations of working-fluid admission or discharge valves (valves in
13/00	Reciprocating-piston machines or engines with		general F16K) [1, 2006.01]
	rotating cylinders in order to obtain the reciprocating-piston motion (machines or engines of	25/12	Devices dealing with sensing elements or final
	flexible-wall type F01B 19/00) [1, 2, 2006.01]		actuators or transmitting means between them, e.
13/02	<ul> <li>with one cylinder only [1, 2006.01]</li> </ul>		power-assisted (sensing elements alone F01B 25/04; final actuators alone
13/04	<ul> <li>with more than one cylinder [1, 2006.01]</li> </ul>		F01B 25/08) <b>[1, 2006.01]</b>
13/06	• in star arrangement [1, 2006.01]	25/14	<ul> <li>peculiar to particular kinds of machines or engines [1, 2006.01]</li> </ul>
<b>15/00</b>	Reciprocating-piston machines or engines with	25/16	<ul> <li>Safety means responsive to specific conditions</li> </ul>
	movable cylinders other than provided for in group		(against water hammer or the like in steam engines
	<b>F01B 13/00</b> (with movable cylinder sleeves for		F01B 31/34) <b>[1, 2006.01]</b>
15/00	working-fluid control F01L) [1, 2006.01]	25/18	preventing rotation in wrong
15/02	<ul> <li>with reciprocating cylinders (with one piston within another F01B 7/20) [1, 2006.01]</li> </ul>		direction [1, 2006.01]
15/04	<ul> <li>with oscillating cylinder [1, 2006.01]</li> </ul>	25/20	• Checking operation of safety devices [1, 2006.01]
15/04	Control of working-fluid admission or discharge	25/22	Braking by redirecting working fluid [1, 2006.01]
15/00	peculiar thereto [1, 2006.01]	25/24	• • thereby regenerating energy [1, 2006.01]
	•	25/26	• Warning devices [1, 2006.01]
17/00	Reciprocating-piston machines or engines characterised by use of uniflow principle [1, 2006.01]	27/00	<b>Starting of machines or engines</b> (starting combustion engines F02N) [1, 2006.01]
17/02	• Engines [1, 2006.01]	27/02	• of reciprocating-piston engines [1, 2006.01]
17/04	• • Steam engines [1, 2006.01]	27/04	<ul> <li>by directing working-fluid supply, e.g. by aid of</li> </ul>
19/00	Positive-displacement machines or engines of		by-pass steam conduits [1, 2006.01]
13/00	flexible-wall type [1, 2006.01]	27/06	• • • specially for compound engines [1, 2006.01]
19/02	• with plate-like flexible members [1, 2006.01]	27/08	• • Means for moving crank off dead-centre (turning
19/04	• with tubular flexible members [1, 2006.01]		gear in general F16H) [1, 2006.01]
		29/00	Machines or engines with pertinent characteristics

**F01C ROTARY-PISTON OR OSCILLATING-PISTON MACHINES OR ENGINES** (combustion engines F02; internal-combustion aspects F02B 53/00, F02B 55/00; machines for liquids F03, F04)

### Note(s)

- 1. This subclass <u>covers</u>:
  - rotary-piston or oscillating-piston engines for elastic fluids, e.g. steam;
  - rotary-piston or oscillating-piston engines for liquids and elastic fluids;
  - rotary-piston or oscillating-piston machines for elastic fluids;
  - rotary-piston or oscillating-piston machines for liquids and elastic fluids.
- In this subclass, the following expression is used with the meaning indicated:
  - "rotary-piston machine" includes the German expressions "Drehkolbenmaschinen", "Kreiskolbenmaschinen", and "Umlaufkolbenmaschinen".
- 3. Attention is drawn to the Notes preceding class F01, especially as regards the definitions of "rotary-piston machine", "oscillating-piston machine", "rotary piston", "co-operating members", "movement of co-operating members", "teeth or tooth-equivalents" and "internal-axis".

### Subclass index

MACHINES OF ENGINES

WINCHING OR LINGING	
With rotary pistons	1/00-7/00
With oscillating pistons.	9/00
Control; monitoring; safety arrangements	20/00
COMBINATIONS OR ADAPTATIONS OF MACHINES OR ENGINES	
DRIVE OF CO-OPERATING MEMBERS; SEALING ARRANGEMENTS	17/00, 19/00
OTHER DETAILS OR ACCESSORIES	

1/00 Rotary-piston machines or engines (with axes of cooperating members non-parallel F01C 3/00; with the working-chamber walls at least partly resiliently deformable F01C 5/00; with fluid ring or the like F01C 7/00; rotary-piston machines or engines in which the working fluid is exclusively displaced by, or exclusively displaces, one or more reciprocating pistons F01B 13/00) [1, 2006.01]

### Note(s)

Group F01C 1/30 takes precedence over groups F01C 1/02-F01C 1/24.

of arcuate-engagement type, i.e. with circular translatory movement of co-operating members, each member having the same number of teeth or tooth-equivalents [1, 2006.01]

1/04 • • of internal-axis type [1, 2006.01]

• of other than internal-axis type (F01C 1/063 takes precedence) [1, 2006.01]

1/063 • • with coaxially-mounted members having continuously-changing circumferential spacing between them [3, 2006.01]

1/067 • • having cam-and-follower type drive [3, 2006.01]

1/07 • • having crankshaft-and-connecting-rod type drive [3, 2006.01]

1/073 • • having pawl-and-ratchet type drive [3, 2006.01]

1/077 • • • having toothed-gearing type drive **[3, 2006.01]** 

 of intermeshing-engagement type, i.e. with engagement of co-operating members similar to that of toothed gearing [1, 2006.01]

 of internal-axis type with the outer member having more teeth or tooth-equivalents, e.g. rollers, than the inner member [1, 2006.01]

1/107 •	• • with helical teeth [3, 2006.01]	3/00
1/113 •	<ul> <li>the inner member carrying rollers intermeshing with the outer member [3, 2006.01]</li> </ul>	
1/12 •	• of other than internal-axis type [1, 2006.01]	2/02
1/14 •	• • with toothed rotary pistons [1, 2006.01]	3/02
1/16 •	<ul> <li>• with helical teeth, e.g. chevron-shaped, screw type [1, 2006.01]</li> </ul>	3/04
1/18 •	• • • with similar tooth forms (F01C 1/16 takes precedence) [1, 2006.01]	3/06
•	• • • with dissimilar tooth forms (F01C 1/16 takes precedence) [1, 2006.01]	3/08
• 1/22	of internal-axis type with equidirectional movement	
	of co-operating members at the points of	5/00
	engagement, or with one of the co-operating	
	members being stationary, the inner member having more teeth or tooth-equivalents than the outer	
	member [1, 2006.01]	5/02
/24 •	of counter-engagement type, i.e. the movement of co- operating members at the points of engagement being	5/04
	in opposite directions [1, 2006.01]	
/26 •	• of internal-axis type <b>[1, 2006.01]</b>	5/06
/28 •	<ul> <li>of other than internal-axis type [1, 2006.01]</li> </ul>	5/08
/30 •	having the characteristics covered by two or more of groups F01C 1/02, F01C 1/08, F01C 1/22, F01C 1/24	7/00
	or having the characteristics covered by one of these	7/00
	groups together with some other type of movement	
/22 •	between co-operating members [1, 2006.01]	9/00
/32 •	<ul> <li>having both the movement defined in group F01C 1/02 and relative reciprocation between the co-operating members [1, 2006.01]</li> </ul>	11/00
/324 •	<ul> <li>with vanes hinged to the inner member and</li> </ul>	
	reciprocating with respect to the outer member [3, 2006.01]

**F01D NON-POSITIVE-DISPLACEMENT MACHINES OR ENGINES, e.g. STEAM TURBINES** (combustion engines F02; machines or engines for liquids F03, F04; non-positive-displacement pumps F04D)

### Note(s)

- 1. This subclass <u>covers</u>:
  - non-positive-displacement engines for elastic fluids, e.g. steam turbines;
  - non-positive-displacement engines for liquids and elastic fluids;
  - non-positive-displacement machines for elastic fluids;
  - non-positive-displacement machines for liquids and elastic fluids.
- 2. Attention is drawn to the Notes preceding class F01, especially as regards the definitions of "reaction type", e.g. with airfoil-like blades, and "impulse type", e.g. bucket turbines.

### **Subclass index**

NON-POSITIVE-DISPLACEMENT MACHINES OR ENGINES	
General characteristics; with axial-thrust balancing; with other than pure rotation	1/00, 3/00, 23/00
Component parts	
blades and carrying members, protection thereof; rotors with adjustable blades; stators	5/00, 7/00, 9/00
means against internal leakage	11/00
COMBINATIONS OR ADAPTATIONS OF MACHINES OR ENGINES	
REGULATION, CONTROLLING, SAFETY MEANS	17/00, 19/00, 21/00
STARTING; SHUTTING-DOWN	19/00, 21/00
OTHER DETAILS AND ACCESSORIES	25/00

1/00	Non-positive-displacement machines or engines, e.g.			
	steam turbines (with working-fluid flows in opposite			
axial directions for balancing axial thrust F01D 3/with other than pure rotation F01D 23/00; turbines				
cycles, or processes, regulating devices therefore				
	F01K) <b>[1, 2006.01]</b>			

- with stationary working-fluid guiding means and bladed or like rotor (F01D 1/24 takes precedence; without working-fluid guiding means F01D 1/18) [1, 5, 2006.01]
- 1/04 traversed by the working-fluid substantially axially [1, 2006.01]
- 1/06 traversed by the working-fluid substantially radially [1, 2006.01]
- 1/08 • having inward flow [1, 2006.01]

- having two or more stages subjected to workingfluid flow without essential intermediate pressure change, i.e. with velocity stages (F01D 1/12 takes precedence) [1, 2006.01]
- 1/12 • with repeated action on same blade ring **[1, 2006.01]**
- 1/14 • traversed by the working-fluid substantially radially [1, 2006.01]
- 1/16 characterised by having both reaction stages and impulse stages [1, 2006.01]
- 1/18 without working-fluid guiding means (F01D 1/24, F01D 1/32, F01D 1/34 take precedence) [1, 5, 2006.01]
- 1/20 traversed by the working-fluid substantially axially [1, 2006.01]
- 1/22 traversed by the working-fluid substantially radially [1, 2006.01]

1/24	<ul> <li>characterised by counter-rotating rotors subjected to same working-fluid stream without intermediate stator blades or the like [1, 2006.01]</li> </ul>
1/26	<ul> <li>traversed by the working-fluid substantially axially [1, 2006.01]</li> </ul>
1/28	<ul> <li>traversed by the working-fluid substantially radially [1, 2006.01]</li> </ul>
1/30	<ul> <li>characterised by having a single rotor operable in either direction of rotation, e.g. by reversing of blades (combinations of machines or engines F01D 13/00) [1, 2006.01]</li> </ul>
1/32	<ul> <li>with pressure/velocity transformation exclusively in rotor, e.g. the rotor rotating under the influence of jets issuing from the rotor [1, 2006.01]</li> </ul>
1/34	<ul> <li>characterised by non-bladed rotor, e.g. with drilled holes (F01D 1/32 takes precedence; sirens G10K 7/00) [1, 5, 2006.01]</li> </ul>
1/36	• • using fluid friction [1, 2006.01]
1/38	• • of the screw type <b>[5, 2006.01]</b>
3/00	Machines or engines with axial-thrust balancing effected by working fluid [1, 2006.01]
3/02	<ul> <li>characterised by having one fluid flow in one axial direction and another fluid flow in the opposite direction [1, 2006.01]</li> </ul>
3/04	<ul> <li>axial thrust being compensated by thrust-balancing dummy piston or the like [1, 2006.01]</li> </ul>
5/00	Blades; Blade-carrying members (nozzle boxes F01D 9/02); Heating, heat-insulating, cooling, or antivibration means on the blades or the members [1, 2006.01]
5/02	<ul> <li>Blade-carrying members, e.g. rotors (rotors of non-bladed type F01D 1/34; stators F01D 9/00) [1, 2006.01]</li> </ul>
5/03	<ul> <li>Annular blade-carrying members having blades on the inner periphery of the annulus and extending inwardly radially, i.e. inverted rotors [6, 2006.01]</li> </ul>
5/04	• • for radial-flow machines or engines [1, 2006.01]
5/06	<ul> <li>Rotors for more than one axial stage, e.g. of drum or multiple-disc type; Details thereof, e.g. shafts, shaft connections [1, 2006.01]</li> </ul>
5/08	<ul> <li>Heating, heat-insulating, or cooling means [1, 2006.01]</li> </ul>
5/10	• • Antivibration means [1, 2006.01]
5/12	<ul> <li>Blades (blade roots F01D 5/30; rotors with blades adjustable in operation F01D 7/00; stator blades F01D 9/02) [1, 2006.01]</li> </ul>
5/14	<ul> <li>Form or construction (selecting particular materials, measures against erosion or corrosion F01D 5/28) [1, 2006.01]</li> </ul>
5/16	• • • for counteracting blade vibration [1, 2006.01]
5/18	<ul> <li>Hollow blades; Heating, heat-insulating, or cooling means on blades [1, 2006.01]</li> </ul>
5/20	<ul> <li>• • Specially-shaped blade tips to seal space between tips and stator [1, 2006.01]</li> </ul>
5/22	<ul> <li>Blade-to-blade connections, e.g. by shrouding [1, 2006.01]</li> </ul>
5/24	• • using wire or the like [1, 2006.01]
5/26	<ul> <li>Antivibration means not restricted to blade form or construction or to blade-to-blade connections [1, 2006.01]</li> </ul>
5/28	Selecting particular materials: Measures against

erosion or corrosion [1, 2006.01]

keys [1, 2006.01]

Fixing blades to rotors; Blade roots [1, 2006.01]

Locking, e.g. by final locking-blades or

5/30

5/32

- 5/34 Rotor-blade aggregates of unitary construction [1, 2006.01]
- 7/00 Rotors with blades adjustable in operation; Control thereof (for reversing F01D 1/30) [1, 2006.01]
- having adjustment responsive to speed [1, 2006.01]
- **9/00 Stators** (non-fluid guiding aspects of casings, regulating, controlling, or safety aspects, <u>see</u> the relevant groups) **[1, 2006.01]**
- 9/02 Nozzles; Nozzle boxes; Stator blades; Guide conduits [1, 2006.01]
- 9/04 • forming ring or sector **[1, 2006.01]**
- 9/06 Fluid supply conduits to nozzles or the like [1, 2006.01]
- 11/00 Preventing or minimising internal leakage of working fluid, e.g. between stages (sealings in general F16J) [1, 2006.01]
- 11/02 by non-contact sealings, e.g. of labyrinth type (for sealing space between rotor blade tips and stator F01D 11/08) [1, 2006.01]
- 11/04 using sealing fluid, e.g. steam **[1, 2006.01]**
- 11/06 • Control thereof **[1, 2006.01]**
- 11/08 for sealing space between rotor blade tips and stator (specially-shaped blade tips therefor F01D 5/20) [1, 2006.01]
- 11/10 • using sealing fluid, e.g. steam [1, 2006.01]
- • using a rubstrip, e.g. erodible, deformable or resiliently biased part **[6, 2006.01]**
- 11/14 Adjusting or regulating tip-clearance, i.e. distance between rotor-blade tips and stator casing (rotors with blades adjustable in operation F01D 7/00) [6, 2006.01]
- 11/16 • by self-adjusting means (F01D 11/12 takes precedence) **[6, 2006.01]**
- 11/18 • using stator or rotor components with predetermined thermal response, e.g. selective insulation, thermal inertia, differential expansion [6, 2006.01]
- 11/20 • Actively adjusting tip-clearance **[6, 2006.01]**
- 11/22 • by mechanically actuating the stator or rotor components, e.g. moving shroud sections relative to the rotor [6, 2006.01]
- 11/24 • by selectively cooling or heating stator or rotor components [6, 2006.01]
- 13/00 Combinations of two or more machines or engines (F01D 15/00 takes precedence; combinations of two or more pumps F04; fluid gearing F16H; regulating or controlling, see the relevant groups) [1, 2006.01]
- 13/02 Working-fluid interconnection of machines or engines [1, 2006.01]
- 15/00 Adaptations of machines or engines for special use;
  Combinations of engines with devices driven thereby
  (regulating or controlling, see the relevant groups;
  aspects predominantly concerning driven devices, see
  the relevant classes for the devices) [1, 2006.01]
- 15/02 Adaptations for driving vehicles, e.g. locomotives (arrangement in vehicles, <u>see</u> the relevant vehicle classes) [1, 2006.01]
- • the vehicles being waterborne vessels [1, 2006.01]
- 15/06 Adaptations for driving, or combinations with, handheld tools or the like [1, 2006.01]
- 15/08 Adaptations for driving, or combinations with, pumps [1, 2006.01]

### F01L CYCLICALLY OPERATING VALVES FOR MACHINES OR ENGINES (valves in general F16K)

### Note(s) [2009.01]

- 1. Groups F01L 1/00-F01L 13/00 cover only valve-gear or valve arrangements without provision for variable fluid distribution.
- 2. Valve gear or valve arrangements specially adapted for steam engines are covered by groups F01L 15/00-F01L 35/00.
- 3. Valve-gear or valve arrangements specially adapted for machines or engines with variable working-fluid distribution are covered by groups F01L 15/00-F01L 35/00.
- 4. Attention is drawn to the Notes preceding class F01, especially Note (3).
- 5. As regards the above-mentioned Note (3), attention is drawn to F01B 3/10, F01B 15/06, F01C 20/20, F01C 21/18, F02B 53/06, F03C 1/08, F04B 1/18, F04B 7/00, F04B 39/08, F04B 39/10, F04C 14/00, F04C 15/06, F04C 28/00and F04C 29/12.

### Subclass index

VALVE-GEAR OR VALVE ARRANGEMENTS IN GENERAL	
General features	. 1/00
Operation	
mechanical	. 1/00
non-mechanical	.9/00
Lift valves	.3/00
Slide valves	.5/00, 7/00
Arrangements in piston or piston-rod	.11/00
Modified to facilitate engine operations	.13/00
VALVE-GEAR OR VALVE ARRANGEMENTS FOR VARIABLE WORKING-FLUID DISTRIBUTION	
General features	. 1/00
With slide valves	
surrounding cylinder or piston	.17/00
with rotary or oscillatory motion; combined	.33/00, 19/00
other features	.15/00
With lift valves	.35/00
Arrangements with particular characteristics; reversing gear	.21/00-27/00, 29/00
Other valve-gear or valve arrangements	.15/00
Drive, control, or adjustment	

Valve-gear or valve arrangements for positive-displacement machines or engines other than steam engines, e.g. for internalcombustion piston engines, without provision for variable fluid distribution

- 1/00 Valve-gear or valve arrangements, e.g. lift-valve gear (lift valve and valve seat assemblies per se F01L 3/00; slide-valve gear F01L 5/00; actuated non-mechanically F01L 9/00; valve arrangements in working piston or piston-rod F01L 11/00; modifications of valve-gear to facilitate reversing, braking, starting, changing compression ratio, or other specific operations F01L 13/00) [1, 2006.01]
- Valve drive (transmitting-gear between valve drive and valve F01L 1/12) [1, 2006.01]
- 1/04 by means of cams, camshafts, cam discs, eccentrics, or the like (F01L 1/10 takes precedence) [1, 2006.01]
- 1/047 • Camshafts [6, 2006.01]
- 1/053 • overhead type **[6, 2006.01]**
- 1/06 • the cams, or the like, rotating at a higher speed than that corresponding to the valve cycle, e.g. operating four-stroke engine valves directly from crankshaft [1, 2006.01]
- 1/08 • Shape of cams [1, 2006.01]
- 1/10 by means of crank- or eccentric-driven rods [1, 2006.01]
- 1/12 Transmitting-gear between valve drive and valve (simultaneously operating two or more valves F01L 1/26) [1, 2006.01]

- 1/14 • Tappets; Push-rods [1, 2006.01]
- 1/16 • Silencing impact; Reducing wear **[1, 2006.01]**
- 1/18 • Rocking arms or levers **[1, 2006.01]**
- 1/20 Adjusting or compensating clearance, i.e. lash adjustment [1, 2006.01]
- 1/22 • automatically **[1, 2006.01]**
- 1/24 • by fluid means, e.g. hydraulically **[1, 2006.01]**
- 1/245 • Hydraulic tappets **[6, 2006.01]**
- 1/25 • • between cam and valve stem **[6, 2006.01]**
- 1/255 • • between cam and rocker arm **[6, 2006.01]**
- characterised by the provision of two or more valves operated simultaneously by same transmitting-gear; peculiar to machines or engines with more than two lift valves per cylinder (with coaxial valves F01L 1/28) [1, 2006.01]
- characterised by the provision of coaxial valves;
   characterised by the provision of valves co-operating with both intake and exhaust ports [1, 2006.01]
- 1/30 characterised by the provision of positively opened and closed valves, i.e. desmodromic valves [1, 2006.01]
- 1/32 characterised by the provision of means for rotating lift valves, e.g. to diminish wear [1, 2006.01]
- 1/34 characterised by the provision of means for changing the timing of the valves without changing the duration of opening [1, 2006.01]
- 1/344 • changing the angular relationship between crankshaft and camshaft, e.g. using helicoidal gear [6, 2006.01]

• • • by means acting on timing belts or chains <b>[6, 2006.01]</b>	5/12	• • • Arrangements with part-annularly-shaped valves [1, 2006.01]
<ul><li>using bevel or epicyclic gear [6, 2006.01]</li><li>making the angular relationship</li></ul>	5/14	<ul> <li>characterised by the provision of valves with reciprocating and other movements (surrounding</li> </ul>

	chains [6, 2006.01]  • • using bevel or epicyclic gear [6, 2006.01]  • making the angular relationship oscillate [6, 2006.01]  • peculiar to machines or engines of specific type other than four-stroke cycle [1, 2006.01]  • for engines with other than four-stroke cycle, e.g. with two-stroke cycle (F01L 1/26, F01L 1/28 take precedence) [1, 2006.01]  • for engines with scavenging charge near top dead-centre position, e.g. by overlapping inlet and exhaust time (scavenging aspects F02B) [1, 2006.01]  • for machines or engines characterised by cylinder arrangement, e.g. star or fan [1, 2006.01]  • Multiple-valve gear or arrangements, not provided for in preceding subgroups, e.g. with lift and different valves [1, 2006.01]  • Component parts, details, or accessories, not provided for in preceding subgroups [1, 2006.01]  • Lift valves, i.e. cut-off apparatus with closure members having at least a component of their opening and closing motion perpendicular to the closing faces; Parts or accessories thereof [1, 2006.01]  • Selecting particular materials for valve members or valve seats; Valve members or valve seats composed of two or more materials [1, 2006.01]  • Coated valve members or valve seats [1, 2006.01]  • Valve members or valve seats with means for guiding or deflecting the medium controlled thereby, e.g. producing a rotary motion of the drawn-in cylinder charge (for rotating lift valves  F01L 1/32) [1, 2006.01]  • Valve guides; Sealing of valve stem, e.g. sealing by lubricant [1, 2006.01]  • Connecting springs to valve members [1, 2006.01]  • by means of a liquid or solid coolant, e.g. sodium, in a closed chamber in a valve [1, 2006.01]  • by means of a fluid flowing through or along valve, e.g. air (for sealing only F01L 3/08) [1, 2006.01]	chains [6, 2006.01]  • • using bevel or epicyclic gear [6, 2006.01]  • or making the angular relationship oscillate [6, 2006.01]  • peculiar to machines or engines of specific type other than four-stroke cycle [1, 2006.01]  • for engines with other than four-stroke cycle, e.g., with two-stroke cycle (F01L 1/26, F01L 1/28 take precedence) [1, 2006.01]  • for engines with scavenging charge near top dead-centre position, e.g. by overlapping inlet and exhaust time (scavenging aspects F02B) [1, 2006.01]  • for machines or engines characterised by cylinder arrangement, e.g. star or fan [1, 2006.01]  • Multiple-valve gear or arrangements, not provided for in preceding subgroups, e.g. with lift and different valves [1, 2006.01]  • Component parts, details, or accessories, not provided for in preceding subgroups [1, 2006.01]  • Component parts, details, or accessories, not provided for in preceding subgroups [1, 2006.01]  • Selecting particular materials for valve members or valve seats; Valve members or valve seats composed of two or more materials [1, 2006.01]  • Coated valve members or valve seats [1, 2006.01]  • Valve members or valve seats with means for guiding or deflecting the medium controlled thereby, e.g. producing a rotary motion of the drawn-in cylinder charge (for rotating lift valves F01L 1/32) [1, 2006.01]  • Valve guides; Sealing of valve stem, e.g. sealing by lubricant [1, 2006.01]  • Valve guides; Sealing of valve stem, e.g. sealing by lubricant [1, 2006.01]  • by means of a liquid or solid coolant, e.g. sodium, in a closed chamber in a valve [1, 2006.01]  • by means of a liquid flowing through or along valve, e.g. air (for sealing only F01L 3/08) [1, 2006.01]  • by means of a fluid flowing through or along valve, e.g. air (for sealing only F01L 3/08) [1, 2006.01]  • by means of a fluid flowing through or this

group [1, 2006.01]

3/22 Valve seats not provided for in preceding subgroups of this group; Fixing of valve seats [1, 2006.01]

3/24 · Safety means or accessories, not provided for in preceding subgroups of this group [1, 2006.01]

5/00 Slide-valve gear or valve arrangements (with pure rotary or oscillatory movement F01L 7/00) [1, 2006.01]

5/02 with other than cylindrical, sleeve, or part-annularlyshaped valves, e.g. with flat-type valves [1, 2006.01]

5/04 with cylindrical, sleeve, or part-annularly-shaped valves **[1, 2006.01]** 

5/06 surrounding working cylinder or piston **[1, 2006.01]** 

16

5/08 Arrangements with several movements or several valves, e.g. one valve inside the other (with part-annularly-shaped valves F01L 5/12) **[1, 2006.01]** 

5/10 with reciprocating and other movement of same valve [1, 2006.01]

9/04 • by electric means **[1, 2006.01]** 

mechanically [1, 2006.01]

11/00 Valve arrangements in working piston or pistonrod [1, 2006.01]

• by fluid means, e.g. hydraulic [1, 2006.01]

11/02 • in piston [1, 2006.01]

9/02

11/04 operated by movement of connectingrod **[1, 2006.01]** 

11/06 • operating oscillatory valve [1, 2006.01]

13/00 Modifications of valve-gear to facilitate reversing, braking, starting, changing compression ratio, or other specific operations [1, 2006.01]

13/02 • for reversing [1, 2006.01]

for starting by means of fluid pressure [1, 2006.01] 13/04

• for braking [1, 2006.01] 13/06

13/08 • for decompression, e.g. during starting; for changing compression ratio [1, 2006.01]

Valve-gear or valve arrangements specially adapted for steam engines, or specially adapted for other positive-displacement machines or engines with variable working-fluid distribution

### Note(s)

- 1. Groups F01L 15/00-F01L 31/00<u>cover</u>:
  - valve drive or means external to valves for adjustment during operation;
  - tripping-gear;
  - reversing-gear;
  - use of pistons or piston-rods as valves or as valve-supporting elements;
  - valve-gear or valve arrangements peculiar to free-piston machines or engines.
- Groups F01L 15/00-F01L 31/00do not fully cover subject matter restricted to rotary, oscillatory, or lift-valve gear or valve arrangements, which is covered by group F01L 33/00 or F01L 35/00.
- 15/00 Valve-gear or valve arrangements, e.g. with reciprocatory slide valves, other than provided for in groups F01L 17/00-F01L 29/00 (valve drive or external valve-adjustment during operation, see the relevant groups, e.g. F01L 31/00; tripping-gear or tripping of valves F01L 31/00) [1, 2006.01]
- with valves other than cylindrical, sleeve, or partannularly-shaped, e.g. flat D-valves [1, 2006.01]
- 15/04 main valve being combined with auxiliary valve (of drag-valve type F01L 15/10) [1, 2006.01]
- 15/06 • of Meyer or Rider type, i.e. in which the expansion is varied at the expansion valve itself [1, 2006.01]
- with cylindrical, sleeve, or part-annularly-shaped valves; Such main valves combined with auxiliary valves [1, 2006.01]
- with main slide valve and auxiliary valve dragged thereby [1, 2006.01]
- characterised by having means for effecting pressure equilibrium between two different cylinder spaces at idling [1, 2006.01]
- Arrangements with several co-operating main valves, e.g. reciprocatory and rotary [1, 2006.01]
- 15/16 with reciprocatory slide valves only [1, 2006.01]
- 15/18 Valve arrangements not provided for in preceding subgroups of this group [1, 2006.01]
- Component parts, details, or accessories, not provided for in preceding subgroups of this group [1, 2006.01]
- 17/00 Slide-valve gear or valve arrangements with cylindrical, sleeve, or part-annularly-shaped valves surrounding working cylinder or piston [1, 2006.01]
- Drive, or adjustment during operation, peculiar thereto, e.g. for reciprocating and oscillating movements or for several valves one inside the other [1, 2006.01]
- 19/00 Slide-valve gear or valve arrangements with reciprocatory and other movement of same valve, other than provided for in group F01L 17/00, e.g. longitudinally and in cross direction of working cylinder [1, 2006.01]
- 19/02 Drive, or adjustment during operation, peculiar thereto [1, 2006.01]
- 21/00 Use of working pistons or piston-rods as fluiddistributing valves or as valve-supporting elements, e.g. in free-piston machines [1, 2006.01]
- Piston or piston-rod used as valve member [1, 2006.01]

- 21/04 Valves arranged in or on piston or pistonrod [1, 2006.01]
- 23/00 Valves controlled by impact of piston, e.g. in freepiston machines [1, 2006.01]
- 25/00 Drive, or adjustment during operation, of distribution or expansion valves by non-mechanical means [1, 2006.01]
- 25/02 by fluid means **[1, 2006.01]**
- 25/04 • by working fluid of machine or engine, e.g. free-piston machine [1, 2006.01]
- 25/06 • Arrangements with main and auxiliary valves, at least one of them being fluid-driven [1, 2006.01]
- 25/08 by electric or magnetic means **[1, 2006.01]**
- 27/00 Distribution or expansion-valve gear peculiar to freepiston machines or engines and not provided for in groups F01L 21/00-F01L 25/00 [1, 2006.01]
- 27/02 the machine or engine having rotary or oscillatory valves [1, 2006.01]
- Delayed-action controls, e.g. of cataract- or dash-pottype [1, 2006.01]
- **29/00 Reversing-gear** (equally usable for control of degree of working fluid admission, and reversing being of secondary importance F01L 31/00) [1, 2006.01]
- 29/02 by displacing eccentric **[1, 2006.01]**
- 29/04 by links or guide rods [1, 2006.01]
- by interchanging inlet and exhaust ports [1, 2006.01]
- specially for rotary or oscillatory valves [1, 2006.01]
- 29/10 Details, e.g. drive [1, 2006.01]
- 29/12 • Powered reverse gear [1, 2006.01]
- 31/00 Valve drive, valve adjustment during operation, or other valve control, not provided for in groups F01L 15/00-F01L 29/00 (sensing elements measuring the variable or condition to be controlled or regulated F01B) [1, 2006.01]
- 31/02 with tripping-gear (for oscillatory valves F01L 31/06); Tripping of valves [1, 2006.01]
- 31/04 with positively-driven trip levers [1, 2006.01]
- with tripping-gear specially for oscillatory valves; Oscillatory tripping-valves, e.g. of Corliss type [1, 2006.01]
- Valve drive or valve adjustment, apart from tripping aspects; Positively-driven gear [1, 2006.01]
- 31/10 the drive being effected by eccentrics (F01L 31/14 takes precedence) [1, 2006.01]
- 31/12 • Valve adjustment by displacing eccentric [1, 2006.01]
- 31/14 Valve adjustment by links or guide rods, e.g. in valve-gears with eccentric drive [1, 2006.01]
- 31/16 the drive being effected by specific means other than eccentric, e.g. cams; Valve adjustment in connection with such drives [1, 2006.01]
- 31/18 • specially for rotary or oscillatory valves [1, 2006.01]
- 31/20 • Valve adjustment **[1, 2006.01]**
- 31/22 • specially for lift valves [1, 2006.01]
- 31/24 • Valve adjustment [1, 2006.01]

Rotary or oscillatory slide-valve gear or lift-valve gear or such valve arrangements specially adapted for steam engines, or specially adapted for other positive-displacement machines or engines with variable working-fluid distribution 33/00 Rotary or oscillatory slide-valve gear or valve arrangements, specially adapted for machines or

engines with variable fluid distribution (drive, adjustment during operation, tripping-gear, reversinggear, use of working pistons or piston-rods as valves or as valve-supporting elements, valve-gear or valve arrangements peculiar to free-piston machines or engines F01L 15/00-F01L 31/00) [1, 2006.01]

33/02 rotary [1, 2006.01] 33/04 • oscillatory [1, 2006.01]

35/00 Lift-valve gear or valve arrangements specially adapted for machines or engines with variable fluid distribution (drive, adjustment during operation, tripping-gear, reversing-gear, use of working pistons or piston-rods as valves or as valve-supporting elements, valve-gear or valve arrangements peculiar to free-piston machines or engines F01L 15/00-F01L 31/00) [1, 2006.01]

35/02 • Valves [1, 2006.01]

> • Arrangements of valves in the machine or engine, e.g. relative to working cylinder [1, 2006.01]

#### LUBRICATING OF MACHINES OR ENGINES IN GENERAL; LUBRICATING INTERNAL-COMBUSTION ENGINES; F01M CRANKCASE VENTILATING [2]

35/04

### Note(s) [2006.01]

Attention is drawn to the Notes preceding class F01, especially as regards Note (3).

Attention is drawn to the following places, which cover lubrication of specific machines or engines: 2.

> F01B 31/10.....Steam engines F01C 21/04.....Rotary-piston or oscillating-piston machines or engines F01D 25/18.....Non-positive-displacement machines F02C 7/06.....Gas-turbine plants F02F 1/20.....Cylinders of combustion engines F04B 39/02.....Pumps for elastic fluids F04C 29/02.....Rotary-piston or oscillating-piston pumps for liquids

F04D 29/04.....Non-positive-displacement pumps

### **Subclass index**

PRESSURE LUBRICATION	1/00
SPECIAL LUBRICATION	3/00, 7/00, 9/00
LUBRICANT CONDITIONING	5/00
DETAILS, ACCESSORIES	11/00
CRANKCASE VENTILATION.	

#### 1/00 Pressure lubrication [1, 2006.01]

using lubricating pumps [1, 2006.01] 1/02

using pressure in working cylinder or crankcase to 1/04 operate lubricant-feeding devices [1, 2006.01]

Lubricating systems characterised by the provision 1/06 therein of crankshafts or connecting-rods with lubricant passageways, e.g. bores [1, 2006.01]

1/08 Lubricating systems characterised by the provision therein of lubricant-jetting means [1, 2006.01]

1/10 Lubricating systems characterised by the provision therein of lubricant venting or purifying means, e.g. of filters (mounting of, connecting of, or constructional details of lubricant purifying means F01M 11/03) [1, 2006.01]

Closed-circuit lubricating systems not provided for in 1/12 groups F01M 1/02-F01M 1/10 [1, 2006.01]

Timed lubrication (F01M 1/08 takes 1/14 precedence) [1, 2006.01]

Controlling lubricant pressure or 1/16 quantity [1, 2006.01]

Indicating or safety devices (concerning lubricant 1/18 level F01M 11/06, F01M 11/12) [1, 2006.01]

• • concerning lubricant pressure [1, 2006.01] 1/20

• rendering machines or engines inoperative or 1/22 idling on pressure failure [1, 2006.01]

• • • acting on engine fuel system [1, 2006.01] 1/24

· acting on engine ignition 1/26 system [1, 2006.01]

acting on engine combustion-air 1/28 supply [1, 2006.01]

3/00 Lubrication specially adapted for engines with crankcase compression of fuel-air mixture, or for other engines in which lubricant is contained in fuel, combustion air, or fuel-air mixture (separating lubricant from air or fuel-air mixture before entry into cylinder F01M 11/08) [1, 2006.01]

3/02 • with variable proportion of lubricant to fuel, lubricant to air, or lubricant to fuel-air mixture [1, 2006.01]

3/04 • for upper cylinder lubrication only [1, 2006.01]

5/00 Heating, cooling, or controlling temperature of **lubricant** (arrangement of lubricant coolers in engine cooling system F01P 11/08); Lubrication means facilitating engine starting [1, 2006.01]

5/02 · Conditioning lubricant for aiding engine starting, e.g. heating [1, 2006.01]

5/04 • • Diluting, e.g. with fuel [1, 2006.01]

7/00 Lubrication means specially adapted for machine or engine running-in [1, 2006.01]

F01P COOLING OF MACHINES OR ENGINES IN GENERAL; COOLING OF INTERNAL-COMBUSTION ENGINES (arrangements in connection with cooling of propulsion units in vehicles B60K 11/00; heat-transfer, heat-exchange or heat-storage materials C09K 5/00; heat-exchange in general, radiators F28)

### Note(s)

- 1. In this subclass, the following terms or expressions are used with the meanings indicated:
  - "air" also includes other gaseous cooling fluids;
  - "liquid cooling" also includes cooling where liquid is used as the heat-transferring fluid between parts to be cooled and the air, e.g.
    using radiators;
  - "air cooling" means direct air cooling and thus excludes indirect air cooling occurring in liquid cooling systems as explained under liquid cooling above;
  - "cooling-air" includes directly- or indirectly-acting cooling-air.
- 2. Attention is drawn to the Notes preceding class F01, especially as regards Note (3).
- 3. Cooling by lubricant is classified in subclass F01M when the lubrication aspect predominates, and in subclass F01P when the cooling aspect predominates.

Air cooling;	Liquid	cooling

1/06

- **1/00 Air cooling** (propelling cooling-air or liquid coolants F01P 5/00; controlling supply or circulation of coolants F01P 7/00) **[1, 2006.01]**
- Arrangements for cooling cylinders or cylinder heads, e.g. ducting cooling-air from its pressure source to cylinders or along cylinders [1, 2006.01]

• • by cutting in or out of pumps [1, 2006.01]

- 7/10 by throttling amount of air flowing through liquidto-air heat-exchangers [1, 2006.01]
- 7/12 • by thermostatic control **[1, 2006.01]**
- 7/14 the coolant being liquid **[1, 2006.01]**
- 7/16 • by thermostatic control **[1, 2006.01]**

# 9/00 Cooling having pertinent characteristics not provided for in, or of interest apart from, groups F01P 1/00-F01P 7/00 (profiting from waste heat of combustion-engine cooling F02G 5/00) [1, 2006.01]

- 9/02 Cooling by evaporation, e.g. by spraying water on to cylinders (evaporation and condensation of liquid coolant in closed cycles F01P 3/22) [1, 2006.01]
- 9/04 by simultaneous or alternative use of direct air cooling and liquid cooling (F01P 9/02 takes precedence) [1, 2006.01]
- 9/06 by use of refrigerating apparatus, e.g. of compressor or absorber type [1, 2006.01]

# 11/00 Component parts, details, or accessories, not provided for in, or of interest apart from, groups F01P 1/00-F01P 9/00 [1, 2006.01]

- 11/02 Liquid-coolant overflow, venting, or draining devices (automatic draining during freezing conditions F01P 11/20) [1, 2006.01]
- Arrangements of liquid pipes or hoses [1, 2006.01]
- 11/06 Cleaning (in general B08B); Combating corrosion (in general C23F) [1, 2006.01]
- 11/08 Arrangements of lubricant coolers (in lubrication apparatus F01M) [1, 2006.01]
- 11/10 Guiding or ducting cooling-air to or from liquid-to-air heat-exchangers [1, 2006.01]
- 11/12 Filtering, cooling, or silencing coolingair [1, 2006.01]
- 11/14 Indicating devices; Other safety devices [1, 2006.01]
- 11/16 concerning coolant temperature (F01P 11/20 takes precedence) [1, 2006.01]
- 11/18 • concerning coolant pressure, coolant flow, or liquid-coolant level [1, 2006.01]
- 11/20 concerning atmospheric freezing conditions, e.g. automatically draining or heating during frosty weather [1, 2006.01]

### F02 COMBUSTION ENGINES; HOT-GAS OR COMBUSTION-PRODUCT ENGINE PLANTS

**F02B INTERNAL-COMBUSTION PISTON ENGINES; COMBUSTION ENGINES IN GENERAL** (cyclically operating valves therefor F01L; lubricating internal-combustion engines F01M; gas-flow silencers or exhaust apparatus therefor F01N; cooling of internal-combustion engines F01P; internal-combustion turbines F02C; plants in which engines use combustion products F02C, F02G)

### Note(s)

7/06

7/08

3/22

- 1. In this subclass, the following terms or expression are used with the meanings indicated:
  - "positive ignition" means ignition by a source external to the working fluid, e.g. by spark or incandescent source;
  - "charging" means forcing air or fuel-air mixture into engine cylinders, and thus includes supercharging;
  - "scavenging" means forcing the combustion residues from the cylinders other than by movement of the working pistons, and thus includes tuned exhaust systems.
- 2. Attention is drawn to the Notes preceding class F01, especially as regards Note (1).
- 3. Engines with specified cycles or number of cylinders are classified in group F02B 75/02 or F02B 75/16, unless other classifying features predominate.

Engines characterised by precombustion chambers or airstorage chambers, or characterised by special shape or construction of combustion chambers to improve operation

19/00 Engines characterised by precombustion chambers (engines with incandescent chambers F02B 9/08) [1, 2006.01]
19/02 • the chamber being periodically isolated from its

 the chamber being periodically isolated from its cylinder [1, 2006.01]

- 19/04 the isolation being effected by a protuberance on piston or cylinder head [1, 2006.01]
- with auxiliary piston in chamber for transferring ignited charge to cylinder space [1, 2006.01]
- 19/08 the chamber being of air-swirl type **[1, 2006.01]**
- with fuel introduced partly into pre-combustion chamber, and partly into cylinder (F02B 19/02-F02B 19/08 take precedence) [1, 2006.01]
- 19/12 with positive ignition (F02B 19/02-F02B 19/10 take precedence) [1, 2006.01]
- 19/14 with compression ignition (F02B 19/02-F02B 19/10 take precedence) [1, 2006.01]
- 19/16 Chamber shapes or constructions not specific to groups F02B 19/02-F02B 19/10 [1, 2006.01]
- 19/18 Transfer passages between chamber and cylinder [1, 2006.01]

### 21/00 Engines characterised by air-storage chambers [1, 2006.01]

- Chamber shapes or constructions [1, 2006.01]
- 23/00 Other engines characterised by special shape or construction of combustion chambers to improve operation (engines with incandescent chambers F02B 9/08) [1, 2006.01]
- 23/02 with compression ignition **[1, 2006.01]**
- 23/04 • the combustion space being subdivided into two or more chambers (with pre-combustion chambers F02B 19/00) [1, 2006.01]
- 23/06 the combustion space being arranged in working piston (F02B 23/04 takes precedence) [1, 2006.01]
- 23/08 with positive ignition [1, 2006.01]
- 23/10 with separate admission of air and fuel into cylinder [1, 2006.01]

### Engines characterised by provision for charging or scavenging

- 25/00 Engines characterised by using fresh charge for scavenging cylinders (aspects characterised by provision of driven charging or scavenging pumps F02B 33/00-F02B 39/00) [1, 2006.01]
- using unidirectional scavenging [1, 2006.01]
- 25/04 Engines having ports both in cylinder head and in cylinder wall near bottom of piston stroke [1, 2006.01]
- 25/06 • the cylinder-head ports being controlled by working pistons, e.g. by sleeve-shaped extensions thereof [1, 2006.01]
- 25/08 • Engines with oppositely-moving reciprocating working pistons [1, 2006.01]
- 25/10 • with one piston having a smaller diameter or shorter stroke than the other **[1, 2006.01]**
- 25/12 Engines with U-shaped cylinders, having ports in each arm [1, 2006.01]
- using reverse-flow scavenging, e.g. with both inlet and outlet ports arranged near bottom of piston stroke [1, 2006.01]
- 25/16 the charge flowing upward essentially along cylinder wall opposite the inlet ports [1, 2006.01]
- 25/18 • the charge flowing upward essentially along cylinder wall adjacent the inlet ports, e.g. by means of deflection rib on piston [1, 2006.01]
- Means for reducing the mixing of charge and combustion residues or for preventing escape of fresh charge through outlet ports, not provided for in, or of interest apart from, groups F02B 25/02-F02B 25/18 [1, 2006.01]

25/22	<ul> <li>by forming air cushion between charge and combustion residues [1, 2006.01]</li> </ul>		characterised by provision of driven charging or ng pumps
25/24 25/26	<ul> <li>• Inlet or outlet openings being timed asymmetrically relative to bottom deadcentre [1, 2006.01]</li> <li>• Multi-cylinder engines other than those provided for in, or of interest apart from, groups F02B 25/02-</li> </ul>	33/00	Engines characterised by provision of pumps for charging or scavenging (characterised by the introduction of liquid fuel into cylinders by use of auxiliary fluid F02B 13/00; characterised by after-
	F02B 25/24 (internal-combustion aspects of rotary engines with movable cylinders F02B 57/00) <b>[1, 2006.01]</b>		charging F02B 29/06; characterised by provision of pumps for sucking combustion residues from cylinders F02B 35/00; characterised by provision of exhaust-driven pumps F02B 37/00) [1, 2006.01]
25/28	• with V-, fan-, or star-arrangement of cylinders [1, 2006.01]	33/02	• Engines with reciprocating-piston pumps; Engines with crankcase pumps [1, 2006.01]
27/00	Use of kinetic or wave energy of charge in induction systems, or of combustion residues in exhaust systems, for improving quantity of charge or for increasing removal of combustion residues	33/04	<ul> <li>with simple crankcase pumps, i.e. with the rear face of a non-stepped working piston acting as sole pumping member in co-operation with the crankcase [1, 2006.01]</li> </ul>
	(aspects characterised by provision of driven charging or scavenging pumps F02B 33/00-F02B 39/00, e.g. use of	33/06	<ul> <li>with reciprocating-piston pumps other than simple crankcase pumps [1, 2006.01]</li> </ul>
	driven apparatus for immediate conversion of combustion gas pressure into pressure of fresh charge F02B 33/42) [1, 2006.01]	33/08	<ul> <li>• with the working-cylinder head arranged between working and pumping cylinders [1, 2006.01]</li> </ul>
27/02	• the systems having variable, i.e. adjustable, cross- sectional areas, chambers of variable volume, or like variable means (in exhaust systems only F02B 27/06) [1, 2006.01]	33/10	<ul> <li>• with the pumping cylinder situated between working cylinder and crankcase, or with the pumping cylinder surrounding working cylinder [1, 2006.01]</li> </ul>
27/04	<ul> <li>in exhaust systems only, e.g. for sucking-off combustion gases [1, 2006.01]</li> </ul>	33/12	• • • the rear face of working piston acting as pumping member and co-operating with a
27/06	<ul> <li>the systems having variable, i.e. adjustable, cross- sectional areas, chambers of variable volume, or like variable means [1, 2006.01]</li> </ul>		pumping chamber isolated from crankcase, the connecting-rod passing through the chamber and co-operating with movable isolating member [1, 2006.01]
29/00	Engines characterised by provision for charging or scavenging not provided for in groups F02B 25/00, F02B 27/00 or F02B 33/00-F02B 39/00; Details	33/14 33/16	<ul> <li>• • • working and pumping pistons forming stepped piston [1, 2006.01]</li> <li>• • • working and pumping pistons having</li> </ul>

# 41/00 Engines characterised by special means for improving conversion of heat or pressure energy into mechanical power [1, 2006.01]

• Engines with prolonged expansion [1, 2006.01]

41/04 • in main cylinders [1, 2006.01]

41/06 • • in compound cylinders [1, 2006.01]

41/08 • • • Two-stroke compound engines [1, 2006.01]

41/10 • using exhaust turbines (use of exhaust turbines for charging F02B 37/00; turbine constructions F01D; gas-turbine plants F02C) [1, 2006.01]

# Engines operating on non-liquid fuels; Plants including such engines, i.e. combinations of the engine with fuel-generating apparatus

# 43/00 Engines characterised by operating on gaseous fuels; Plants including such engines (engines characterised by the gas-air charge being ignited by compression ignition of an additional fuel F02B 7/06; engines convertible from gas to other fuel consumption F02B 69/04) [1, 2006.01]

43/02 • Engines characterised by means for increasing operating efficiency [1, 2006.01]

• • for improving efficiency of combustion [1, 2006.01]

43/06 • • for enlarging charge [1, 2006.01]

43/08 • Plants characterised by the engines using gaseous fuel generated in the plant from solid fuel, e.g. wood [1, 2006.01]

• Engines or plants characterised by use of other specific gases, e.g. acetylene, oxyhydrogen [1, 2006.01]

43/12 • • Methods of operating **[1, 2006.01]** 

# 45/00 Engines characterised by operating on non-liquid fuels other than gas; Plants including such engines (plants involving generation of gaseous fuel from solid fuel F02B 43/08; engines convertible from gas to other fuel consumption F02B 69/04) [1, 2006.01]

45/02 • operating on powdered fuel, e.g. powdered coal (operating on fuel containing oxidant F02B 45/06) [1, 2006.01]

45/04 • • Plants, e.g. having coal-grinding apparatus **[1, 2006.01]** 

• operating on fuel containing oxidant [1, 2006.01]

45/08 • operating on other solid fuels **[1, 2006.01]** 

45/10 • operating on mixtures of liquid and non-liquid fuels, e.g. in pasty or foamed state [1, 2006.01]

# Methods of operating engines involving specific pre-treating of, or adding specific substances to, combustion air, fuel or fuel-air mixture of the engines, and not otherwise provided for

47/00 Methods of operating engines involving adding nonfuel substances or anti-knock agents to combustion air, fuel, or fuel-air mixtures of engines [1, 2006.01]

47/02 • the substances being water or steam **[1, 2006.01]** 

47/04 • the substances being other than water or steam only [1, 2006.01]

47/06 • the substances including non-airborne oxygen (F02B 47/10 takes precedence) [1, 2006.01]

47/08 • the substances including exhaust gas [1, 2006.01]

 47/10 • • Circulation of exhaust gas in closed or semiclosed circuits, e.g. with simultaneous addition of oxygen [1, 2006.01]

49/00 57/08 · Engines with star-shaped cylinder Methods of operating air-compressing compressionignition engines involving introduction of small arrangements [1, 2006.01] quantities of fuel in the form of a fine mist into the 57/10 with combustion space in centre of air in the engine's intake [1, 2006.01] star [1, 2006.01] 51/00 Other methods of operating engines involving pre-59/00 Internal-combustion aspects of other reciprocatingtreating of, or adding substances to, combustion air, piston engines with movable, e.g. oscillating, fuel, or fuel-air mixture of the engines [1, 2006.01] cylinders (with yieldable walls • involving catalysts [1, 2006.01] 51/02 F02B 75/38) [1, 2006.01] 51/04 • involving electricity or magnetism [1, 2006.01] 51/06 • involving rays or sound waves [1, 2006.01] Adaptations of engines for special use; Combinations of engines with devices other than engine parts or auxiliaries Internal-combustion aspects of rotary-piston or oscillating-61/00 Adaptations of engines for driving vehicles or for piston engines driving propellers; Combinations of engines with gearing (the engine torque being divided by a 53/00 Internal-combustion aspects of rotary-piston or differential gear for driving a scavenging or charging oscillating-piston engines (internal-combustion aspects pump and the engine output shaft F02B 39/06; of rotary pistons or outer members for co-operation adaptations or combinations of rotary-piston or therewith F02B 55/00) [1, 2006.01] oscillating-piston engines F02B 53/14; arrangements in 53/02 • Methods of operating [1, 2006.01] vehicles, see the relevant classes for 53/04 Charge admission or combustion-gas vehicles) [1, 2006.01] discharge [1, 2006.01] 61/02 • for driving cycles [1, 2006.01] 53/06 Valve control therefor [1, 2006.01] 61/04 • for driving propellers [1, 2006.01] Charging, e.g. by means of rotary-piston 53/08 Combinations of engines with mechanical gearing 61/06 pump [1, 2006.01] (F02B 61/02, F02B 61/04 take • Fuel supply; Introducing fuel to combustion 53/10 precedence) [1, 2006.01] space [1, 2006.01] 53/12 • Ignition [1, 2006.01] 63/00 Adaptations of engines for driving pumps, hand-held 53/14 · Adaptations of engines for driving, or engine tools or electric generators; Portable combinations of combinations with, other devices (aspects engines with engine-driven devices (of rotary-piston or predominantly concerning such devices, see the oscillating-piston engines F02B 53/14) [1, 2006.01] relevant classes for the devices) [1, 2006.01] 63/02 for hand-held tools [1, 2006.01] 63/04 • for electric generators [1, 2006.01] 55/00 Internal-combustion aspects of rotary pistons; Outer 63/06 for pumps [1, 2006.01] members for co-operation with rotary pistons [1, 2006.01] 65/00 Adaptations of engines for special uses not provided 55/02 • Pistons [1, 2006.01] for in groups F02B 61/00 or F02B 63/00; 55/04 • • Cooling thereof [1, 2006.01] Combinations of engines with other devices, e.g. with 55/06 • • by air or other gas [1, 2006.01] non-driven apparatus (of rotary-piston or oscillating-55/08 • Outer members for co-operation with rotary pistons; piston engines F02B 53/14; combinations of prime-Casings [1, 2006.01] movers consisting of electric motors and internal combustion engines for mutual or common propulsion 55/10• • Cooling thereof [1, 2006.01] B60K 6/20) [1, 2006.01] 55/12 • • • by air or other gas [1, 2006.01] Shapes or constructions of combustion 55/14 chambers [1, 2006.01] **Engines with pertinent characteristics other than those** 55/16 Admission or exhaust passages in pistons or outer provided for in, or of interest apart from, preceding main members [1, 2006.01] groups 67/00 Engines characterised by the arrangement of Internal-combustion aspects of reciprocating-piston engines auxiliary apparatus not being otherwise provided with movable cylinders for, e.g. the apparatus having different functions; Driving auxiliary apparatus from engines, not 57/00 Internal-combustion aspects of rotary engines in otherwise provided for [1, 2006.01] which the combusted gases displace one or more 67/04 · of mechanically-driven auxiliary reciprocating pistons [1, 2006.01] apparatus [1, 2006.01] 57/02 • Fuel or combustion-air supply (cylinder-charge 67/06 driven by means of chains, belts, or like endless admission or exhaust control members [1, 2006.01] F02B 57/04) [1, 2006.01] 67/08 · of non-mechanically driven auxiliary 57/04 Control of cylinder-charge admission or exhaust apparatus [1, 2006.01] (peculiar to two-stroke engines or to other engines 67/10 of charging or scavenging apparatus [5, 2006.01] with working-piston-controlled charge admission or exhaust F02B 57/06) [1, 2006.01] 69/00 Internal-combustion engines convertible into other 57/06 Two-stroke engines or other engines with workingcombustion-engine type, not provided for in group piston-controlled cylinder-charge admission or F02B 11/00; Internal-combustion engines of different exhaust (with combustion space in centre of star

types characterised by constructions facilitating use

of same main engine-parts in different

types [1, 2006.01]

F02C GAS-TURBINE PLANTS; AIR INTAKES FOR JET-PROPULSION PLANTS; CONTROLLING FUEL SUPPLY IN AIR-BREATHING JET-PROPULSION PLANTS (construction of turbines F01D; jet-propulsion plants F02K; construction of compressors or fans F04; combustion apparatus in which combustion takes place in a fluidised bed of fuel or other particles F23C 10/00; generating combustion products of high pressure or high velocity F23R; using gas turbines in compression refrigeration plants F25B 11/00; using gas-turbine plants in vehicles, see the relevant vehicle classes)

### Note(s)

- This subclass covers:
  - combustion product or hot gas turbine plants;
  - internal combustion turbines or turbine plants;
  - turbine plants in which the working fluid is an unheated, pressurised gas.
- This subclass does not cover:
  - steam turbine plants, which are covered by subclass F01K;
  - special vapour plants, which are covered by subclass F01K.
- In this subclass, the following expression is used with the meaning indicated: 3.
  - "gas-turbine plants" covers all the subject matter of Note (1) above and covers also features of jet-propulsion plants common to gasturbine plants.
- Attention is drawn to the Notes preceding class F01.

- 1/00 Gas-turbine plants characterised by the use of hot gases or unheated pressurised gases, as the working fluid (by the use of combustion products F02C 3/00, F02C 5/00) [1, 3, 2006.01]
- 1/02 the working fluid being an unheated pressurised gas [1, 3, 2006.01]
- 1/04 the working fluid being heated indirectly [1, 3, 2006.01]
- characterised by the type or source of heat, e.g. using nuclear or solar energy [3, 2006.01]
- using reheated exhaust gas (F02C 1/08 takes precedence) [1, 3, 2006.01]
- 1/08 • Semi-closed cycles [3, 2006.01]
- 1/10 • Closed cycles [3, 2006.01]
- 3/00 Gas-turbine plants characterised by the use of combustion products as the working fluid (generated by intermittent combustion F02C 5/00) [1, 2006.01]
- using exhaust-gas pressure in a pressure exchanger to compress combustion-air (pressure exchangers per se F04F 13/00) [1, 2006.01]
- having a turbine driving a compressor (power transmission arrangements F02C 7/36; control of working fluid flow F02C 9/16) [1, 5, 2006.01]
- 3/045 having compressor and turbine passages in a single rotor (F02C 3/073 takes precedence) [3, 2006.01]
- 3/05 • the compressor and the turbine being of the radial flow type [3, 2006.01]
- 3/055 the compressor being of the positive-displacement type [3, 2006.01]
- 3/06 the compressor comprising only axial stages (F02C 3/10 takes precedence) [1, 3, 2006.01]
- 3/067 • having counter-rotating rotors (F02C 3/073 takes precedence) [3, 2006.01]
- 3/073 • the compressor and turbine stages being concentric [3, 2006.01]
- 3/08 the compressor comprising at least one radial stage (F02C 3/10 takes precedence) [1, 3, 2006.01]
- 3/09 • of the centripetal type **[3, 2006.01]**
- with another turbine driving an output shaft but not driving the compressor [1, 2006.01]
- 3/107 with two or more rotors connected by power transmission [5, 2006.01]
- 3/113 • with variable power transmission between rotors **[5, 2006.01]**
- having variable working fluid interconnections between turbines or compressors or stages of different rotors [5, 2006.01]
- 3/14 characterised by the arrangement of the combustion chamber in the plant (combustion chambers <u>per se</u> F23R) [1, 3, 2006.01]
- 3/16 • the combustion chambers being formed at least partly in the turbine rotor [1, 2006.01]
- using a special fuel, oxidant, or dilution fluid to generate the combustion products [1, 3, 2006.01]
- the fuel or oxidant being gaseous at standard temperature and pressure (F02C 3/28 takes precedence) [1, 3, 2006.01]
- the fuel or oxidant being liquid at standard temperature and pressure [1, 3, 2006.01]
- 3/26 the fuel or oxidant being solid or pulverulent, e.g. in slurry or suspension [1, 2006.01]
- 3/28 • using a separate gas producer for gasifying the fuel before combustion [3, 2006.01]

- Adding water, steam or other fluids to the combustible ingredients or to the working fluid before discharge from the turbine (heating of air intakes to prevent icing F02C 7/047) [3, 2006.01]
- Inducing air flow by fluid jet, e.g. ejector action [3, 2006.01]
- with recycling of part of the working fluid, i.e. semiclosed cycles with combustion products in the closed part of the cycle [3, 2006.01]
- 3/36 Open cycles [3, 2006.01]
- 5/00 Gas-turbine plants characterised by the working fluid being generated by intermittent combustion [1, 2006.01]
- characterised by the arrangement of the combustion chamber in the plant (combustion chambers <u>per se</u> F23R) [1, 3, 2006.01]
- 5/04 the combustion chambers being formed at least partly in the turbine rotor [1, 2006.01]
- the working fluid being generated in an internal-combustion gas generator of the positive-displacement type having essentially no mechanical power output (internal-combustion engines with prolonged expansion using exhaust gas turbines F02B) [1, 2006.01]
- 5/08 • the gas generator being of the free-piston type [1, 2006.01]
- the working fluid forming a resonating or oscillating gas column, i.e. the combustion chambers having no positively actuated valves, e.g. using Helmholtz effect [1, 3, 2006.01]
- 5/11 using valveless combustion chambers [3, 2006.01]
- the combustion chambers having inlet or outlet valves, e.g. Holzwarth gas-turbine plants [1, 2006.01]
- 6/00 Plural gas-turbine plants; Combinations of gasturbine plants with other apparatus (aspects predominantly concerning such apparatus, <u>see</u> the relevant classes for the apparatus); Adaptations of gasturbine plants for special use [3, 2006.01]
- 6/02 Plural gas-turbine plants having a common power output [3, 2006.01]
- Gas-turbine plants providing heated or pressurised working fluid for other apparatus, e.g. without mechanical power output (F02C 6/18 takes precedence) [3, 2006.01]
- 6/06 providing compressed gas (F02C 6/10 takes precedence) [3, 2006.01]
- 6/08 • the gas being bled from the gas-turbine compressor [3, 2006.01]
- 6/10 supplying working fluid to a user, e.g. a chemical process, which returns working fluid to a turbine of the plant [3, 2006.01]
- 6/12 • Turbochargers, i.e. plants for augmenting mechanical power output of internal-combustion piston engines by increase of charge pressure [3, 2006.01]
- Gas-turbine plants having means for storing energy,
   e.g. for meeting peak loads [3, 2006.01]
- 6/16 • for storing compressed air [3, 2006.01]
- using the waste heat of gas-turbine plants outside the plants themselves, e.g. gas-turbine power heat plants (using waste heat as source of energy for refrigeration plants F25B 27/02) [3, 2006.01]
- Adaptations of gas-turbine plants for driving vehicles [3, 2006.01]

- 7/00 Features, component parts, details or accessories, not provided for in, or of interest apart from, groups F02C 1/00-F02C 6/00; Air intakes for jet-propulsion plants (controlling F02C 9/00) [1, 3, 2006.01]
- 7/04 Air intakes for gas-turbine plants or jet-propulsion plants [1, 3, 2006.01]
- 7/042 having variable geometry **[3, 2006.01]**
- 7/045 having provisions for noise suppression [3, 2006.01]
- 7/047 • Heating to prevent icing [3, 2006.01]
- 7/05 having provisions for obviating the penetration of damaging objects or particles [3, 2006.01]
- 7/052 • with dust-separation devices **[3, 2006.01]**
- 7/055 • with intake grids, screens or guards [3, 2006.01]
- 7/057 Control or regulation (conjointly with fuel supply control F02C 9/50, with nozzle area control F02K 1/16) [3, 2006.01]
- 7/06 Arrangement of bearings (bearings F16C); Lubricating (of engines in general F01M) [1, 3, 2006.01]
- 7/08 Heating air supply before combustion, e.g. by exhaust gases [1, 2006.01]
- 7/10 • by means of regenerative heatexchangers [1, 2006.01]
- 7/105 • of the rotary type (rotary heat exchangers <u>per se</u> F28D) [3, 2006.01]
- 7/12 Cooling of plants (of component parts, <u>see</u> the relevant subclasses, e.g. F01D; cooling of engines in general F01P) [1, 2006.01]
- 7/14 • of fluids in the plant **[1, 2006.01]**
- 7/141 • of working fluid (F02C 3/30 takes precedence) [3, 2006.01]
- 7/143 • before or between the compressor stages [3, 2006.01]
- 7/16 characterised by cooling medium [1, 2006.01]
- 7/18 • the medium being gaseous, e.g. air [1, 2006.01]
- Mounting or supporting of plant; Accommodating heat expansion or creep [1, 2006.01]
- 7/22 Fuel supply systems **[1, 2006.01]**
- 7/224 • Heating fuel before feeding to the burner [3, 2006.01]
- 7/228 • Dividing fuel between various burners [3, 2006.01]
- 7/232 Fuel valves; Draining valves or systems (valves in general F16K) [3, 2006.01]
- 7/236 • Fuel delivery systems comprising two or more pumps [3, 2006.01]
- Heat or noise insulation (air intakes having provisions for noise suppression F02C 7/045; turbine exhaust heads, chambers, or the like F01D 25/30; silencing nozzles of jet-propulsion plants F02K 1/00) [1, 3, 2006.01]
- 7/25 Fire protection or prevention (in general A62) [3, 2006.01]
- 7/26 Starting; Ignition [1, 2006.01]
- 7/262 • Restarting after flame-out [3, 2006.01]
- 7/264 • Ignition [3, 2006.01]
- 7/266 • Electric (sparking plugs H01T) [3, 2006.01]
- 7/268 • Starting drives for the rotor [3, 2006.01]
- 7/27 • Fluid drives (turbine starters F02C 7/277) **[3, 2006.01]**
- 7/272 • generated by cartridges **[3, 2006.01]**

- 7/275 • Mechanical drives [3, 2006.01]
- 7/277 • the starter being a turbine [3, 2006.01]
- 7/28 Arrangement of seals [1, 2006.01]
- 7/30 Preventing corrosion in gas-swept spaces [1, 2006.01]
- 7/32 Arrangement, mounting, or driving, of auxiliaries [1, 2006.01]
- Power transmission between the different shafts of the gas-turbine plant, or between the gas-turbine plant and the power user (F02C 7/32 takes precedence; couplings for transmitting rotation F16D; gearing in general F16H) [3, 2006.01]
- 9/00 Controlling gas-turbine plants; Controlling fuel supply in air-breathing jet-propulsion plants (controlling air intakes F02C 7/057; controlling turbines F01D; controlling compressors F04D 27/00) [1, 3, 2006.01]
- 9/16 Control of working fluid flow (F02C 9/48 takes precedence; control of air-intake flow F02C 7/057) [3, 2006.01]
- 9/18 • by bleeding, by-passing or acting on variable working fluid interconnections between turbines or compressors or their stages [3, 5, 2006.01]
- 9/20 • by throttling; by adjusting vanes **[3, 2006.01]**
- 9/22 • by adjusting turbine vanes [3, 2006.01]
- 9/24 Control of the pressure level in closed cycles [3, 2006.01]
- 9/26 Control of fuel supply (F02C 9/48 takes precedence; fuel valves F02C 7/232) [3, 2006.01]
- 9/28 Regulating systems responsive to plant or ambient parameters, e.g. temperature, pressure, rotor speed (F02C 9/30-F02C 9/38, F02C 9/44 take precedence) [3, 2006.01]
- 9/30 characterised by variable fuel pump output [3, 2006.01]
- 9/32 characterised by throttling of fuel (F02C 9/38 takes precedence) [3, 2006.01]
- 9/34 • Joint control of separate flows to main and auxiliary burners [3, 2006.01]
- 9/36 characterised by returning of fuel to sump (F02C 9/38 takes precedence) [3, 2006.01]
- 9/38 • characterised by throttling and returning of fuel to sump [3, 2006.01]
- 9/40 specially adapted to the use of a special fuel or a plurality of fuels [3, 2006.01]
- 9/42 specially adapted for the control of two or more plants simultaneously [3, 2006.01]
- 9/44 responsive to the speed of aircraft, e.g. Mach number control, optimisation of fuel consumption [3, 2006.01]
- 9/46 • Emergency fuel control **[3, 2006.01]**
- 9/48 Control of fuel supply conjointly with another control of the plant (with nozzle section control F02K 1/17) [3, 2006.01]
- 9/50 with control of working fluid flow **[3, 2006.01]**
- 9/52 • by bleeding or by-passing the working fluid [3, 2006.01]
- 9/54 • by throttling the working fluid, by adjusting vanes [3, 2006.01]
- 9/56 with power transmission control [3, 2006.01]
- 9/58 • with control of a variable-pitch propeller [3, 2006.01]

**F02D CONTROLLING COMBUSTION ENGINES** (vehicle fittings, acting on a single sub-unit only, for automatically controlling vehicle speed B60K 31/00; conjoint control of vehicle sub-units of different type or different function, road vehicle drive control systems for purposes other than the control of a single sub-unit B60W; cyclically operating valves for combustion engines F01L; controlling combustion engine lubrication F01M; cooling internal-combustion engines F01P; supplying combustion engines with combustible mixtures or constituents thereof, e.g. carburettors, injection pumps, F02M; starting of combustion engines F02N; controlling of ignition F02P; controlling gas-turbine plants, jet-propulsion plants, or combustion-product engine plants, see the relevant subclasses for these plants) [4, 2006.01]

### Note(s) [4]

- 1. In this subclass, the following term or expression is used with the meanings indicated:
  - "fuel injection" means the introduction of a combustible substance into a space, e.g. cylinder, by means of a pressure source, e.g. a pump, continuously or cyclically acting behind the substance;
  - "supercharging" means supplying to the working space, e.g. cylinder, combustion-air pressurised by means of a pressure source, e.g. a pump.
- 2. Attention is drawn to the Notes preceding class F01.
- 3. In this subclass, electrical aspects of control arrangements are classified in groups F02D 41/00-F02D 45/00.

### Subclass index

### CONTROLLING COMBUSTION ENGINES IN GENERAL

Characterised by action on engine operation

Characterised by action on engine operation	
on injection: general; low pressure; other means	.1/00, 3/00, 7/00
by throttling air or fuel-and-air induction or exhaust	.9/00
on valve-operating cycle; varying compression ratio	.13/00, 15/00
cutting-out cylinders, rendering engines inoperative or idling	17/00
on delivery of fuel or combustion-air, not otherwise provided for	.33/00
on two or more associated functions not otherwise provided for	37/00
non-automatic initiation, e.g. by operator	.11/00
initiation by speed-sensing governors or by interior or exterior conditions, not otherwise provided	
for	.31/00, 35/00
forProgramme control	.28/00
CONTROL OF PARTICULAR ENGINES	
engines: characterised by fuel; by combustion medium used; by supercharge	.19/00, 21/00, 23/00
co-operating engines; reversible engines; engines driving vehicle or particular devices	.25/00, 27/00, 29/00
OTHER CONTROL	
Non-electrical	
Electrical	.41/00-45/00

### Controlling, e.g. regulating, fuel injection

- 1/00 Controlling fuel-injection pumps, e.g. of highpressure injection type (F02D 3/00 takes precedence) [1, 2, 2006.01]
- not restricted to adjustment of injection timing, e.g. varying amount of fuel delivered [1, 2006.01]
- 1/04 by mechanical means dependent on engine speed,
   e.g. using centrifugal governors (F02D 1/08 takes precedence) [1, 2006.01]
- by means dependent on pressure of engine working fluid (F02D 1/08 takes precedence) [1, 2006.01]
- 1/08 Transmission of control impulse to pump control, e.g. with power drive or power assistance [1, 2006.01]
- 1/10 • mechanical [1, 2006.01]
- 1/12 • non-mechanical, e.g. hydraulic **[1, 2006.01]**
- 1/14 • pneumatic [1, 2006.01]
- 1/16 Adjustment of injection timing (F02D 1/02 takes precedence) [1, 2006.01]

- with non-mechanical means for transmitting control impulse; with amplification of control impulse [1, 2006.01]
- 3/00 Controlling low-pressure fuel injection, i.e. where the air-fuel mixture containing fuel thus injected will be substantially compressed by the compression stroke of the engine, by means other than controlling only an injection pump (carburettors F02M) [1, 2, 2006.01]

### Note(s) [5]

When the control apparatus or system forms part of the low-pressure fuel-injection apparatus it is classified in group F02M 69/00.

- with continuous injection or continuous flow upstream of the injection nozzle [1, 2, 2006.01]
- Controlling fuel injection and carburation, e.g. of alternative systems [1, 2006.01]

### 7/00 Other non-electrical fuel injection control [1, 4, 2006.01]

 Controlling fuel injection where fuel is injected by compressed air [1, 2006.01]

#### 9/00 Controlling engines by throttling air or fuel-and-air Controlling peculiar to specified types or adaptations of engines induction conduits or exhaust conduits [1, 2006.01] 19/00 Controlling engines characterised by their use of 9/02 concerning induction conduits (throttle valves, or non-liquid fuels, pluralities of fuels, or non-fuel arrangements thereof in conduits substances added to the combustible mixtures (the F02D 9/08) [1, 2006.01] non-fuel substances being gaseous 9/04 concerning exhaust conduits (throttle valves, or F02D 21/00) [1, 2006.01] arrangements thereof in conduits peculiar to engines working with gaseous fuels 19/02 F02D 9/08) [1, 2006.01] (apparatus, or control parts thereof, for mixing gas 9/06 • • Exhaust brakes [1, 2006.01] and air F02M) [1, 2006.01] 9/08 • Throttle valves specially adapted therefor; 19/04 peculiar to engines working with solid fuels, e.g. Arrangements of such valves in conduits (throttle pulverised coal [1, 2006.01] valves modified for use in, or arranged in, 19/06 peculiar to engines working with pluralities of fuels, carburettors F02M; throttle valves in general e.g. alternatively with light and heavy fuel oil, other F16K) [1, 2006.01] than engines indifferent to the fuel 9/10 • • having pivotally-mounted flaps [1, 2006.01] consumed [1, 2006.01] 9/12 · · having slidably-mounted valve-members; having 19/08 simultaneously using pluralities of fuels valve-members movable longitudinally of (F02D 19/12 takes precedence) [1, 2006.01] conduit [1, 2006.01] peculiar to compression-ignition engines in 19/10 9/14 • • the members being slidable transversely of which the main fuel is gaseous [1, 2006.01] conduit [1, 2006.01] peculiar to engines working with non-fuel substances 19/12 9/16 • the members being rotatable [1, 2006.01] or with anti-knock agents, e.g. with anti-knock fuel • • having elastic-wall valve-members [1, 2006.01] 9/18 (apparatus, or control parts thereof, for delivering such substances or agents F02M) [1, 2006.01] 11/00 Arrangements for, or adaptations to, non-automatic engine control initiation means, e.g. operator 21/00 Controlling engines characterised by their being **initiated** (specially for reversing F02D 27/00; supplied with non-airborne oxygen or other non-fuel arrangement or mounting of prime-mover control gas [1, 2006.01] devices in vehicles B60K 26/00) [1, 2, 5, 2006.01] 21/02 peculiar to oxygen-fed engines [1, 2006.01] 11/02 characterised by hand, foot, or like operator 21/04 with circulation of exhaust gases in closed or controlled initiation means [1, 5, 2006.01] semi-closed circuits [1, 2006.01] 11/04 characterised by mechanical control linkages (with 21/06 • peculiar to engines having other non-fuel gas added power drive or assistance to combustion-air [1, 2006.01] F02D 11/06) [1, 5, 2006.01] 21/08 the other gas being the exhaust gas of engine 11/06 · characterised by non-mechanical control linkages, (circulation of exhaust gas in oxygen-fed engines e.g. fluid control linkages or by control linkages with F02D 21/04) [1, 2006.01] power drive or assistance [1, 5, 2006.01] 21/10 having secondary air added to fuel-air mixture 11/08 of the pneumatic type **[1, 5, 2006.01]** (apparatus, or control parts thereof, for delivering 11/10 • • of the electric type [1, 5, 2006.01] secondary air F02M) [1, 2006.01] 13/00 Controlling the engine output power by varying inlet 23/00 Controlling engines characterised by their being or exhaust valve operating characteristics, e.g. timing supercharged [1, 2006.01] (modifying valve gear F01L) [1, 2006.01] 23/02 • the engines being of fuel-injection type [1, 2006.01] 13/02 • during engine operation [1, 2006.01] 13/04 using engine as brake [1, 2006.01] 25/00 Controlling two or more co-operating 13/06 • • Cutting-out cylinders [1, 2006.01] engines [1, 2006.01] • for rendering engine inoperative or 13/08 25/02 to synchronise speed [1, 2006.01] idling [1, 2006.01] 25/04 • by cutting-out engines [1, 2006.01] 15/00 Varying compression ratio (modifying valve-gear 27/00 Controlling engines characterised by their being F01L) [1, 2006.01] reversible [1, 2006.01] 15/02 • by alteration or displacement of piston 27/02 • by performing a programme [1, 2006.01] stroke [1, 2006.01] 15/04 · by alteration of volume of compression space without 28/00 Programme-control of engines (programme-control changing piston stroke [1, 2006.01] specific to a type or purpose covered by one of the groups of this subclass, except groups F02D 29/00, 17/00 Controlling engines by cutting-out individual F02D 39/00, or by one group of another subclass, e.g. of cylinders; Rendering engines inoperative or idling F01L, see that group) [2, 2006.01] (controlling or rendering inoperative by varying inlet or exhaust valve operating characteristics 29/00 Controlling engines, such controlling being peculiar F02D 13/00) [1, 2006.01] to the devices driven thereby, the devices being other than parts or accessories essential to engine 17/02 • Cutting-out (cutting-out engines in multiple-engine operation, e.g. controlling of engines by signals arrangements F02D 25/04) [1, 2006.01] rendering engines inoperative or idling, e.g. caused external thereto [1, 2, 2006.01] 17/04

IPC (2016.01), Section F 31

by abnormal conditions (dependent on lubricating

conditions F01M 1/22; dependent on cooling

- 1/10 • by distorting the jet pipe or nozzle **[1, 2006.01]**
- 1/11 • by means of pivoted eyelids **[3, 2006.01]**
- 1/12 • by means of pivoted flaps **[1, 2006.01]**
- 1/15 • Control or regulation **[3, 2006.01]**
- 1/16 • conjointly with another control **[1, 3, 2006.01]**
- 1/17 • with control of fuel supply [3, 2006.01]
- 1/18 • automatic [1, 3, 2006.01]
- 1/28 using fluid jets to influence the jet flow [3, 2006.01]
- 1/30 • for varying effective area of jet pipe or nozzle [3, 2006.01]
- 1/32 • for reversing thrust **[3, 2006.01]**
- 1/34 for attenuating noise **[3, 2006.01]**
- 1/36 having an ejector [3, 2006.01]
- 1/38 Introducing air inside the jet (F02K 1/28 takes precedence) [3, 2006.01]
- Nozzles having means for dividing the jet into a plurality of partial jets or having an elongated crosssection outlet [3, 2006.01]
- 1/42 the means being movable into an inoperative position [3, 2006.01]
- Nozzles having means, e.g. a shield, reducing sound radiation in a specified direction (F02K 1/40 takes precedence) [3, 2006.01]
- Nozzles having means for adding air to the jet or for augmenting the mixing region between the jet and the ambient air, e.g. for silencing (F02K 1/28, F02K 1/36, F02K 1/38 take precedence) [3, 2006.01]
- 1/48 • Corrugated nozzles [3, 2006.01]
- 1/50 Deflecting outwardly a portion of the jet by retractable scoop-like baffles [3, 2006.01]

- Nozzles specially constructed for positioning adjacent to another nozzle or to a fixed member, e.g. fairing [3, 2006.01]
- 1/54 Nozzles having means for reversing jet thrust (F02K 1/32 takes precedence) [3, 2006.01]
- 1/56 Reversing jet main flow [3, 2006.01]
- 1/58 • Reversers mounted on the inner cone or the nozzle housing [3, 2006.01]
- 1/60 • by blocking the rearward discharge by means of pivoted eyelids or clamshells, e.g. target-type reversers [3, 2006.01]
- 1/62 • by blocking the rearward discharge by means of flaps [3, 2006.01]
- 1/64 • Reversing fan flow [3, 2006.01]
- 1/66 • using reversing fan blades **[3, 2006.01]**
- 1/68 • Reversers mounted on the engine housing downstream of the fan exhaust section [3, 2006.01]
- 1/70 • using thrust reverser flaps or doors mounted on the fan housing [3, 2006.01]
- 1/72 • the aft end of the fan housing being movable to uncover openings in the fan housing for the reversed flow [3, 2006.01]
- 1/74 Reversing at least one flow in relation to at least one other flow in a plural-flow engine [3, 2006.01]
- 1/76 Control or regulation of thrust reversers [3, 2006.01]
- 1/78 Other construction of jet pipes [3, 2006.01]
- 1/80 • Couplings or connections **[3, 2006.01]**
- 1/82 Jet pipe walls, e.g. liners **[3, 2006.01]**

## 3/00 Plants including a gas turbine driving a compressor or a ducted fan [1, 2006.01]

- in which part of the working fluid by-passes the turbine and combustion chamber [1, 2006.01]
- the plant including ducted fans, i.e. fans with high volume, low-pressure outputs, for augmenting jet thrust, e.g. of double-flow type [1, 2006.01]
- 3/06 • with front fan [1, 2006.01]
- 3/062 • with aft fan [3, 2006.01]

9/97 Rocket nozzles (thrust or thrust vector control F02K 9/80) [3, 2006.01]

99/00 Subject matter not provided for in other groups of this subclass [2009.01]

#### F02M SUPPLYING COMBUSTION ENGINES IN GENERAL WITH COMBUSTIBLE MIXTURES OR CONSTITUENTS **THEREOF** (charging such engines F02B)

#### Note(s)

- In this subclass, the following terms or expressions are used with the meanings indicated:
  - "carburettors" means essentially apparatus for mixing fuel with air, the fuel being brought into mixing contact with the air by lowering the air pressure, e.g. in a venturi;
  - "fuel-injection apparatus" means apparatus for introducing fuel into a space, e.g. engine cylinder, by pressurising the fuel, e.g. by a pump acting behind the fuel, and thus includes the so-called "solid-fuel injection" in which liquid fuel is introduced without any admixture of gas:
  - "low-pressure fuel injection" means fuel injection in which the fuel-air mixture containing fuel thus injected will be substantially compressed in the compression stroke of the engine;
  - "pumping element" means a single piston-cylinder unit in a reciprocating-piston fuel-injection pump or the equivalent unit in any other type of fuel-injection pump.
- Attention is drawn to the Notes preceding class F01.

#### Subclass index

SUPPLYING WITH LIQUID FUEL

(	Carburettors	
	starting, idling; float-controlled fuel level; mixture control; throttling, mixing chambers	.1/00, 3/00, 5/00, 7/00, 9/00

multi-stage, register type; combinations of carburettors or fuels; combination with low-pressure Injection apparatus

general characteristics, injection without gas	
with two or more sequentially-fed injectors; with two or more liquids	41/00, 43/00
with cyclic delivery characteristics; with fluid-actuated valves	45/00, 47/00
with pump or injector actuated by cylinder pressure or by the piston	49/00
electrically-operated	51/00
with heating, cooling, or insulating means; characterised by fuel pipes or venting means	53/00, 55/00
injectors combined with other devices	57/00
arrangements of apparatus relative to engine, related pump drives	39/00
other adaptations of pumps; other injectors	59/00, 61/00
other apparatus, details, or accessories	63/00, 69/00
testing	65/00
using high-pressure gas	67/00
low-pressure apparatus	51/02, 69/00, 71/00
SUPPLYING WITH NON-LIQUID FUEL	21/00
FEEDING OR PRETREATING AIR, FUEL, OR FUEL-AIR MIXTURE	
Pre-treating fuel, air, or mixture	
adding secondary air; adding non-fuel substances or secondary fuel	23/00, 25/00

Pre-treating fuel, air, or mixture	
adding secondary air; adding non-fuel substances or secondary fuel	23/00, 25/00
by catalytic, electrical, or magnetic means, or by sound or radiation; thermally	27/00, 31/00
by re-atomising or homogenising; air cleaning; other treatment	29/00, 35/00, 33/00
Air intakes or silencers, induction systems	35/00
Fuel transfer to carburettors or injection apparatus	37/00
SUBJECT MATTER NOT PROVIDED FOR IN OTHER GROUPS OF THIS SUBCLASS	99/00

**Carburettors for liquid fuels** 

1/00 Carburettors with means for facilitating engine's starting or its idling below operational temperatures [1, 2006.01]

• the means to facilitate starting or idling being chokes for enriching fuel-air mixture (automatic chokes F02M 1/08) [1, 2006.01]

1/02

- the means to facilitate starting or idling being auxiliary carburetting apparatus able to be put into, and out of, operation, e.g. having automaticallyoperated disc valves [1, 2006.01]
- 1/06 having axially-movable valves, e.g. piston-shaped [1, 2006.01]
- the means to facilitate starting or idling becoming operative or inoperative automatically (in connection with auxiliary carburetting apparatus F02M 1/04) [1, 2006.01]
- 1/10 dependent on engine temperature, e.g. having thermostat [1, 2006.01]
- 1/12 • with means for electrically heating thermostat [1, 2006.01]
- dependent on pressure in combustion-air- or fuelair-mixture intake (F02M 1/10 takes precedence) [1, 2006.01]
- Other means for enriching fuel-air mixture during starting; Priming cups; using different fuels for starting and normal operation [1, 2006.01]
- 1/18 Enriching fuel-air mixture by depressing float to flood carburettor [1, 2006.01]
- 3/00 **Idling devices for carburettors** (with means for facilitating idling below operational temperatures F02M 1/00) [1, 2006.01]
- 3/02 Preventing flow of idling fuel **[1, 2006.01]**
- under conditions where engine is driven instead of driving, e.g. driven by vehicle running down hill [1, 2006.01]
- 3/045 • Control of valves situated in the idling nozzle system, or the passage system, by electrical means or by a combination of electrical means with fluidic or mechanical means [4, 2006.01]
- 3/05 • Pneumatic or mechanical control, e.g. with speed regulation [4, 2006.01]
- 3/055 • Fuel flow cut-off by introducing air, e.g. brake air, into the idling fuel system **[4, 2006.01]**
- 3/06 Increasing idling speed [1, 2006.01]
- by positioning the throttle flap stop, or by changing the fuel flow cross-sectional area, by electrical, electromechanical or electropneumatical means, according to engine speed [4, 2006.01]
- Other details of idling devices (fighting ice-formation by heating idling ports F02M 15/02) [1, 2006.01]
- 3/09 Valves responsive to engine conditions, e.g. manifold vacuum (F02M 1/00, F02M 5/00-F02M 33/00 take precedence) [5, 2006.01]
- 3/10 • Fuel metering pins; Nozzles **[4, 2006.01]**
- 3/12 Passage way systems **[4, 2006.01]**
- 3/14 Location of idling system outlet relative to throttle valve [4, 2006.01]
- 5/00 Float-controlled apparatus for maintaining a constant fuel level in carburettors [1, 2006.01]
- with provisions to meet variations in carburettor position, e.g. upside-down position in aircraft [1, 2006.01]
- 5/04 • with pivotally or rotatably mounted float chambers [1, 4, 2006.01]
- having adjustable float mechanism, e.g. to meet dissimilarities in specific gravity of different fuels [1, 2006.01]
- 5/08 having means for venting float chambers [1, 2006.01]
- 5/10 having means for preventing vapour lock, e.g. insulated float chambers or forced fuel circulation through float chamber with engine stopped [1, 2006.01]

- Other details, e.g. floats, valves, setting devices or tools (floats in general F16K 33/00) [1, 2006.01]
- 5/16 • Floats [4, 2006.01]
- 7/00 Carburettors with means for influencing, e.g. enriching or keeping constant, fuel/air ratio of charge under varying conditions (choke valves for starting F02M 1/00) [1, 2006.01]
- 7/02 Carburettors having aerated fuel spray nozzles (with valve control for amount of air for aerating fuel F02M 7/24) [1, 2006.01]
- Means for enriching charge at high combustion-air flow [1, 2006.01]
- Means for enriching charge on sudden throttle opening, i.e. at acceleration, e.g. storage means in passage way system [1, 2006.01]
- 7/08 • using pumps [1, 2006.01]
- 7/087 • changing output according to temperature in engine [4, 2006.01]
- 7/093 • changing output according to intake vacuum [4, 2006.01]
- Other installations, without moving parts, for influencing fuel/air ratio, e.g. electrical means
   (F02M 7/23 takes precedence) [1, 4, 2006.01]
- 7/11 • Altering float-chamber pressure (enriching the fuel-air mixture during starting by depressing float to flood carburettor F02M 1/18) [5, 2006.01]
- 7/12 Other installations, with moving parts, for influencing fuel/air ratio, e.g. having valves (F02M 7/24 takes precedence) [1, 4, 2006.01]
- 7/127 Altering the float-chamber pressure (enriching the fuel-air mixture during starting by depressing float to flood carburettor F02M 1/18) [5, 2006.01]
- 7/133 Auxiliary jets, i.e. operating only under certain conditions, e.g. full power (F02M 7/04, F02M 7/06 take precedence) [5, 2006.01]
- 7/14 with means for controlling cross-sectional area of fuel spray nozzle (dependent on air-throttle valve position F02M 7/22) [1, 2006.01]
- 7/16 • operated automatically, e.g. dependent on exhaust-gas analysis [1, 2006.01]
- 7/17 • by a pneumatically adjustable piston-like element, e.g. constant depression carburettors [5, 2006.01]
- 7/18 • with means for controlling cross-sectional area of fuel-metering orifice (dependent on air-throttle position F02M 7/22) [1, 2006.01]
- 7/20 • operated automatically, e.g. dependent on altitude [1, 2006.01]
- fuel flow cross-sectional area being controlled dependent on air-throttle-valve position (the throttle valve being slidably arranged transversely to air passage F02M 9/06) [1, 2006.01]
- 7/23 Fuel aerating devices **[4, 2006.01]**
- 7/24 • Controlling flow of aerating air **[1, 4, 2006.01]**
- 7/26 • dependent on position of optionally operable throttle means [4, 2006.01]
- 7/28 • dependent on temperature or pressure [4, 2006.01]
- 9/00 Carburettors having air or fuel-air mixture passage throttling valves other than of butterfly type (register-type carburettors F02M 11/00); Carburettors having fuel-air mixing chambers of variable shape or position [1, 2006.01]
- 9/02 having throttling valves, e.g. of piston shape, slidably arranged transversely to the passage [1, 2006.01]

F02M			
9/04	<ul> <li>with throttling valves sliding in a plane inclined to the passage [1, 2006.01]</li> </ul>	17/00	Carburettors having pertinent characteristics not provided for in, or of interest apart from, the
9/06	<ul> <li>with means for varying cross-sectional area of fuel spray nozzle dependent on throttle position (F02M 7/17 takes precedence) [1, 5, 2006.01]</li> </ul>		apparatus of main groups F02M 1/00-F02M 15/00 (apparatus for treating combustion-air, fuel, or fuel-air mixture by catalysts, electric means, magnetism, rays,
9/08	<ul> <li>having throttling valves rotatably mounted in the passage [1, 2006.01]</li> </ul>		sonic waves, or the like F02M 27/00; combinations of carburettors and low-pressure fuel-injection apparatus F02M 71/00) [1, 2006.01]
9/10	having valves, or like controls, of elastic-wall type	17/02	• Floatless carburettors [1, 2006.01]
	for controlling the passage, or for varying cross- sectional area, of fuel-air mixing chambers [1, 2006.01]	17/04	having fuel inlet valve controlled by diaphragm [1, 2006.01]

# F03 MACHINES OR ENGINES FOR LIQUIDS; WIND, SPRING, OR WEIGHT MOTORS; PRODUCING MECHANICAL POWER OR A REACTIVE PROPULSIVE THRUST, NOT OTHERWISE PROVIDED FOR

rays [1, 2006.01]

**F03B MACHINES OR ENGINES FOR LIQUIDS** (machines or engines for liquids and elastic fluids F01; positive-displacement engines for liquids F03C; positive-displacement machines for liquids F04)

#### Note(s)

17/06

- This subclass <u>covers</u>:
  - engines, other than of positive-displacement type, driven by liquids;
  - machines, other than of positive-displacement type, for liquids.

• • using a stroboscopic lamp [6, 2006.01]

2. Attention is drawn to the Notes preceding class F01, especially as regards the definition of "reaction type".

#### **Subclass index**

TURBINES: IMPULSE; REACTION	1/00, 3/00
MACHINES OR ENGINES: NON-BLADED ROTOR TYPE; WATER WHEELS; ENDLESS-CHAIN	
TYPE	5/00, 7/00, 9/00
PARTS OR DETAILS OF ABOVE KINDS	
ADAPTATIONS OR COMBINATIONS	13/00
CONTROLLING	15/00
OTHER MACHINES OR ENGINES	17/00

1/00 Engines of impulse type, i.e. turbines with jets of high-velocity liquid impinging on bladed or like rotors, e.g. Pelton wheels; Parts or details peculiar thereto [1, 2006.01]

1/02 • Buckets; Bucket-carrying rotors [1, 2006.01]

1/04 • Nozzles (in general B05B); Nozzle-carrying members [1, 2006.01]

3/00 Machines or engines of reaction type; Parts or details peculiar thereto [1, 2006.01]

with radial flow at high-pressure side and axial flow at low-pressure side of rotors, e.g. Francis turbines [1, 2006.01]

with substantially axial flow throughout rotors, e.g. propeller turbines [1, 2006.01]

3/06	<ul> <li>with adjustable blades, e.g. Kaplan turbines [1, 2006.01]</li> </ul>	13/12	<ul> <li>characterised by using wave or tide energy [1, 2006.01]</li> </ul>
3/08	<ul> <li>with pressure/velocity transformation exclusively in</li> </ul>	13/14	<ul> <li>using wave energy [4, 2006.01]</li> </ul>
	rotors [1, 2006.01]	13/16	• • using the relative movement between a wave-
3/10	<ul> <li>characterised by having means for functioning</li> </ul>		operated member and another
	alternatively as pumps or turbines [1, 2006.01]		member <b>[4, 2006.01]</b>
3/12	• Blades; Blade-carrying rotors [1, 2006.01]	13/18	• • • wherein the other member is fixed, at least at
3/14	<ul> <li>Rotors having adjustable blades [1, 2006.01]</li> </ul>		one point, with respect to the sea bed or
3/16	• Stators [1, 2006.01]		shore <b>[4, 2006.01]</b>
3/18	Stator blades; Guide conduits or vanes, e.g.	13/20	• • • wherein both members are movable relative
	adjustable [1, 2006.01]		to the sea bed or shore <b>[4, 2006.01]</b>
		13/22	• • using the flow of water resulting from wave
5/00	Machines or engines characterised by non-bladed		movements, e.g. to drive a hydraulic motor or
	rotors, e.g. serrated, using friction [1, 2006.01]	42/24	turbine [4, 2006.01]
7/00	Water wheels [1, 2006.01]	13/24	<ul> <li>to produce a flow of air, e.g. to drive an air turbine [4, 2006.01]</li> </ul>
		13/26	• • using tide energy [4, 2006.01]
9/00	Endless-chain type machines or engines [1, 2006.01]		3, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1,
11/00	Parts or details not provided for in, or of interest	15/00	Controlling (controlling in general G05) [1, 2006.01]
11/00	apart from, groups F03B 1/00-F03B 9/00 (controlling	15/02	<ul> <li>by varying liquid flow [1, 2006.01]</li> </ul>
	F03B 15/00) [1, 2006.01]	15/04	<ul> <li>of turbines (rotors having adjustable blades</li> </ul>
11/02	• Casings [1, 2006.01]		F03B 3/06, F03B 3/14; adjustable guide vanes
11/04	• for diminishing cavitation or vibration, e.g.		F03B 3/18; specially adapted for turbines with jets
11/04	balancing [1, 2006.01]		of high-velocity liquid impinging on bladed or like
11/06	• Bearing arrangements <b>[1, 2006.01]</b>	4= 400	rotors F03B 15/20) [1, 2006.01]
11/08	• for removing foreign matter, e.g. mud [1, 2006.01]	15/06	• • Regulating, i.e. acting
11/00	for removing foreign matter, e.g. maa [1, 2000.01]	45.00	automatically [1, 2006.01]
13/00	Adaptations of machines or engines for special use;	15/08	• • • by speed, e.g. by measuring electric frequency or liquid flow [1, 2006.01]
	Combinations of machines or engines with driving or	15/10	• • • • • without retroactive action [1, 2006.01]
	driven apparatus (if the apparatus aspects are		
	predominant, see the relevant places for such apparatus,	15/12	• • • • with retroactive action [1, 2006.01]
	e.g. H02K 7/18); Power stations or aggregates	15/14	• • • by or of water level [1, 2006.01]
	(hydraulic-engineering aspects E02B; incorporating	15/16	• • • by power output [1, 2006.01]
	only machines or engines of positive-displacement type F03C) [1, 2006.01]	15/18	• • • for safety purposes, e.g. preventing overspeed [1, 2006.01]
13/02	<ul> <li>Adaptations for drilling wells [1, 2006.01]</li> </ul>	15/20	<ul> <li>specially adapted for turbines with jets of high-</li> </ul>
13/04	• Adaptations for use in dentistry [1, 2006.01]	15, 20	velocity liquid impinging on bladed or like rotors
13/06	Stations or aggregates of water-storage type (turbines		(nozzles F03B 1/04) <b>[1, 2006.01]</b>
	characterised by having means for functioning	15/22	• • • for safety purposes [1, 2006.01]

#### F03D WIND MOTORS

#### Note(s)

- This subclass covers wind motors, i.e. mechanisms for converting the energy of wind into useful mechanical power, and the transmission of such power to its point of use.
- This subclass does not cover electrical power generation or distribution aspects of wind-power plants, which are covered by section H, e.g. H02J or H02P.
- In this subclass, the following terms or expressions are used with the meanings indicated:
  - "rotor" means the wind-engaging parts of the wind motor and the rotary member carrying them;
  - "rotation axis" means the axis of rotation of the rotor.

1/00	Wind motors with rotation axis substantially parallel to the air flow entering the rotor (controlling thereof	5/00	Other wind motors (controlling thereof F03D 7/00) [1, 2006.01]
1 /00	F03D 7/02) [1, 2006.01]	5/02	the wind-engaging parts being attached to endless
1/02	<ul> <li>having a plurality of rotors [1, 2006.01]</li> </ul>		chains or the like <b>[1, 2006.01]</b>
1/04	<ul> <li>having stationary wind-guiding means, e.g. with shrouds or channels (F03D 9/35 takes</li> </ul>	5/04	<ul> <li>the wind-engaging parts being attached to carriages running on tracks or the like [1, 2006.01]</li> </ul>
	precedence) [1, 2006.01]	5/06	<ul> <li>the wind-engaging parts swinging to-and-fro and not</li> </ul>
1/06	• Rotors [1, 2006.01]		rotating [1, 2006.01]
3/00	Wind motors with rotation axis substantially perpendicular to the air flow entering the rotor	7/00	<b>Controlling wind motors</b> (supplying or distributing electrical power H02J, e.g. arrangements for adjusting,

- (controlling thereof F03D 7/06) **[1, 2006.01]** eliminating or compensating reactive power in networks H02J 3/18; controlling electric generators H02P, e.g. 3/02 • having a plurality of rotors [1, 2006.01] arrangements for controlling electric generators for the 3/04 having stationary wind-guiding means, e.g. with purpose of obtaining a desired output shrouds or channels (F03D 9/35 takes H02P 9/00) [1, 2006.01]
- precedence) [1, 2006.01]
- 7/02 • the wind motors having rotation axis substantially 3/06 • Rotors [1, 2006.01] parallel to the air flow entering the rotor [1, 2006.01]

7/04	• • Automatic control; Regulation [1, 2006.01]	9/43	• • using infrastructure primarily used for other
7/04	the wind motors having rotation axis substantially	3743	purposes, e.g. masts for overhead railway
,,00	perpendicular to the air flow entering the		power lines <b>[2016.01]</b>

SPRING, WEIGHT, INERTIA, OR LIKE MOTORS; MECHANICAL-POWER-PRODUCING DEVICES OR MECHANISMS, NOT OTHERWISE PROVIDED FOR OR USING ENERGY SOURCES NOT OTHERWISE PROVIDED FOR (arrangements in connection with power supply in vehicles from force of nature B60K 16/00; electric propulsion with power supply in vehicles from force of nature B60L 8/00)

#### Note(s)

In this subclass, the following term is used with the meaning indicated:

• "motors" means mechanisms for producing mechanical power from potential energy of solid bodies.

1/00	<b>Spring motors</b> (spring-driven toys A63H; springs in general F16F; precision time mechanisms, e.g. for	3/00	Other motors, e.g. gravity or inertia motors [1, 2006.01]
1/02	<ul> <li>clocks or watches, G04B) [1, 2006.01]</li> <li>characterised by shape or material of spring, e.g. helical, spiral, coil [1, 2006.01]</li> </ul>	3/02	• using wheels with circumferentially-arranged compartments co-operating with solid falling bodies (F03G 3/04 takes precedence) [1, 2006.01]
1/04 1/06	<ul><li>using rubber springs [1, 2006.01]</li><li>Other parts or details [1, 2006.01]</li></ul>	3/04	<ul> <li>driven by sand or like fluent solid material [1, 2006.01]</li> </ul>
1/08	• • for winding [1, 2006.01]	3/06	<ul> <li>using pendulums [1, 2006.01]</li> </ul>
1/10	<ul> <li>for producing output movement other than rotary,</li> <li>e.g. vibratory [1, 2006.01]</li> </ul>	3/08	• using flywheels <b>[1, 2006.01]</b>

4/00 4/02 4/04 4/06 5/00 5/02 5/04 5/06 5/08 6/00 6/02 6/04	Devices for producing mechanical power from geothermal energy [5, 2006.01]  • with direct fluid contact [5, 2006.01]  • with deep-well turbo-pump [5, 2006.01]  • with fluid flashing [5, 2006.01]  Devices for producing mechanical power from muscle energy (driving cycles B62M) [1, 2006.01]  • of endless-walk type, e.g. treadmills [1, 2006.01]  • Horsemills or the like [1, 2006.01]  • other than of endless-walk type [1, 2006.01]  • for combined actuation by different limbs, e.g. hand and leg [1, 2006.01]  Devices for producing mechanical power from solar energy (solar boilers F24) [5, 2006.01]  • using a single state working fluid [5, 2006.01]  • gaseous [5, 2006.01]	6/06 7/00 7/04 7/05 7/06 7/08	<ul> <li>with solar energy concentrating means [5, 2006.01]</li> <li>Mechanical-power-producing mechanisms, not otherwise provided for or using energy sources not otherwise provided for [1, 2006.01]</li> <li>using pressure differences or thermal differences occurring in nature (F03G 7/06 takes precedence) [1, 2006.01]</li> <li>Ocean thermal energy conversion, i.e. OTEC [5, 2006.01]</li> <li>using expansion or contraction of bodies due to heating, cooling, moistening, drying, or the like (using thermal expansion of non-vaporising liquids F01K) [1, 2006.01]</li> <li>recovering energy derived from swinging, rolling, pitching, or like movements, e.g. from the vibrations of a machine [1, 2006.01]</li> <li>Alleged perpetua mobilia (using hydrostatic thrust F03B 17/04) [1, 2006.01]</li> </ul>
F03H	PRODUCING A REACTIVE PROPULSIVE THRUST, F02K)	NOT OTHE	ERWISE PROVIDED FOR (from combustion products
1/00	Use of plasma to produce a reactive propulsive thrust (generating plasma H05H 1/00) [1, 2006.01]	99/00	Subject matter not provided for in other groups of this subclass [2009.01]
3/00	Use of photons to produce a reactive propulsive thrust [1, 2006.01]		

### F04 POSITIVE-DISPLACEMENT MACHINES FOR LIQUIDS; PUMPS FOR LIQUIDS OR ELASTIC FLUIDS

#### Note(s)

Combinations of positive-displacement and non-positive-displacement pumps are classified in subclass F04B as a general subclass for pumps, and in subclasses F04C, F04D in respect of matter specific to those subclasses.

**POSITIVE-DISPLACEMENT MACHINES FOR LIQUIDS; PUMPS** (engine fuel-injection pumps F02M; machines for liquids, or pumps, of rotary-piston or oscillating-piston type F04C; non-positive-displacement pumps F04D; pumping of fluid by direct contact of another fluid or by using inertia of fluid to be pumped F04F; crankshafts, crossheads, connecting-rods F16C; flywheels F16F; gearings for interconverting rotary motion and reciprocating motion in general F16H; pistons, piston-rods, cylinders, in general F16J; ion pumps H01J 41/12; electrodynamic pumps H02K 44/02)

#### Note(s) [7, 2009.01]

- 1. In this subclass, the following term is used with the meaning indicated:
  - "piston" also covers a plunger.
- 2. Attention is drawn to the Notes following the titles of class B81 and subclass B81Brelating to "micro-structural devices" and "micro-structural systems".
- 3. Attention is drawn to the Notes preceding class F01, especially as regards the definitions of "machines", "pumps", and "positive-displacement".
- 4. Machines, pumps or pumping installations having flexible working members are classified in groups F04B 43/00 or F04B 45/00.

#### **Subclass index**

Pump installations	11/00
Control; monitoring; safety arrangements	14/00
Other details or accessories	15/00
PUMPS SPECIALLY ADAPTED FOR ELASTIC FLUIDS	
Rotary-piston pumps	18/00
Rotary-piston pumps with fluid ring or the like	19/00
Oscillating-piston pumps	21/00
Combinations of two or more pumps, each being of rotary-piston or oscillating-piston type; Pump	oing
installations; Multi-stage pumps	23/00
Adaptations of pumps for special use	25/00
Sealing arrangements in rotary-piston pumps	27/00
Control; monitoring; safety arrangements	28/00

Machines for liquids; Pumps for liquids or for liquids and elastic fluids [2011.01]

2/00 Rotary-piston machines or pumps (with non-parallel axes of co-operating members F04C 3/00; with the working-chamber walls at least partly resiliently deformable F04C 5/00; with fluid ring or the like F04C 7/00; rotary-piston pumps specially adapted for elastic fluids F04C 18/00, F04C 19/00; rotary-piston machines or pumps in which the working-fluid is exclusively displaced by, or exclusively displaces, one or more reciprocating pistons F04B) [3, 2006.01]

#### Note(s) [3]

Group F04C 2/30 takes precedence over groups F04C 2/02-F04C 2/24.

- of arcuate-engagement type, i.e. with circular translatory movement of co-operating members, each member having the same number of teeth or tooth-equivalents [3, 2006.01]
- 2/04 • of internal-axis type **[3, 2006.01]**
- of other than internal-axis type (F04C 2/063 takes precedence) [3, 2006.01]
- 2/063 • with coaxially-mounted members having continuously-changing circumferential spacing between them [3, 2006.01]
- 2/067 • having cam-and-follower type drive [3, 2006.01]
- 2/07 • having crankshaft-and-connecting-rod type drive [3, 2006.01]
- 2/073 • having pawl-and-ratchet type drive [3, 2006.01]
- 2/077 • having toothed-gearing type drive [3, 2006.01]
- of intermeshing-engagement type, i.e. with engagement of co-operating members similar to that of toothed gearing [3, 2006.01]
- of internal-axis type with the outer member having more teeth or tooth-equivalents, e.g. rollers, than the inner member [3, 2006.01]
- 2/107 • with helical teeth [3, 2006.01]
- 2/113 • the inner member carrying rollers intermeshing with the outer member [3, 2006.01]
- 2/12 • of other than internal-axis type **[3, 2006.01]**
- 2/14 • with toothed rotary pistons **[3, 2006.01]**
- 2/16 • with helical teeth, e.g. chevron-shaped, screw type [3, 2006.01]
- 2/18 • with similar tooth forms (F04C 2/16 takes precedence) [3, 2006.01]
- 2/20 • • with dissimilar tooth forms (F04C 2/16 takes precedence) **[3, 2006.01]**
- of internal-axis type with equidirectional movement of co-operating members at the points of engagement, or with one of the co-operating members being stationary, the inner member having more teeth or tooth-equivalents than the outer member [3, 2006.01]
- of counter-engagement type, i.e. the movement of cooperating members at the points of engagement being in opposite directions [3, 2006.01]
- 2/26 • of internal-axis type **[3, 2006.01]**
- 2/28 • of other than internal-axis type **[3, 2006.01]**

- having the characteristics covered by two or more of groups F04C 2/02, F04C 2/08, F04C 2/22, F04C 2/24 or having the characteristics covered by one of these groups together with some other type of movement between co-operating members [3, 2006.01]
- 2/32 having both the movement defined in group F04C 2/02 and relative reciprocation between the co-operating members [3, 2006.01]
- with vanes hinged to the inner member and reciprocating with respect to the outer member [3, 2006.01]
- 2/328 • and hinged to the outer member [3, 2006.01]
- 2/332 • with vanes hinged to the outer member and reciprocating with respect to the inner member [3, 2006.01]
- 2/336 • and hinged to the inner member **[3, 2006.01]**
- 2/34 having the movement defined in group F04C 2/08 or F04C 2/22 and relative reciprocation between the co-operating members [3, 2006.01]
- 2/344 • with vanes reciprocating with respect to the inner member [3, 2006.01]
- 2/348 • the vanes positively engaging, with circumferential play, an outer rotatable member [3, 2006.01]
- 2/352 • the vanes being pivoted on the axis of the outer member [3, 2006.01]
- 2/356 • with vanes reciprocating with respect to the outer member [3, 2006.01]
- 2/36 having both the movements defined in groups F04C 2/22 and F04C 2/24 [3, 2006.01]
- having the movement defined in group F04C 2/02 and having a hinged member (F04C 2/32 takes precedence) [3, 2006.01]
- 2/39 • with vanes hinged to the inner as well as to the outer member [3, 2006.01]
- having the movement defined in group F04C 2/08 or F04C 2/22 and having a hinged member [3, 2006.01]
- 2/44 • with vanes hinged to the inner member [3, 2006.01]
- 2/46 • with vanes hinged to the outer member [3, 2006.01]
- 3/00 Rotary-piston machines or pumps, with non-parallel axes of movement of co-operating members, e.g. of screw type (with the working-chamber walls at least partly resiliently deformable F04C 5/00; rotary-piston pumps with non-parallel axes of movement of co-operating members specially adapted for elastic fluids F04C 18/48) [1, 2006.01]
- the axes being arranged at an angle of 90 degrees [5, 2006.01]
- of intermeshing engagement type, i.e. with engagement of co-operating members similar to that of toothed gearing [5, 2006.01]
- the axes being arranged otherwise than at an angle of 90 degrees [5, 2006.01]
- 3/08 • of intermeshing engagement type, i.e. with engagement of co-operating members similar to that of toothed gearing **[5, 2006.01]**

- 5/00 Rotary-piston machines or pumps with the workingchamber walls at least partly resiliently deformable (such pumps specially adapted for elastic fluids F04C 18/00) [1, 2006.01]
- **7/00 Rotary-piston machines or pumps with fluid ring or the like** (such pumps specially adapted for elastic fluids F04C 19/00) **[1, 2006.01]**
- **9/00 Oscillating-piston machines or pumps** (such pumps specially adapted for elastic fluids F04C 21/00) **[1, 2006.01]**
- 11/00 Combinations of two or more machines or pumps, each being of rotary-piston or oscillating-piston type (combinations of such pumps specially adapted for elastic fluids F04C 23/00); Pumping installations (F04C 13/00 takes precedence; specially adapted for elastic fluids F04C 23/00; fluid gearing F16H 39/00-F16H 47/00) [1, 2006.01]
- 13/00 Adaptations of machines or pumps for special use, e.g. for extremely high pressures (of pumps specially adapted for elastic fluids F04C 25/00) [1, 2006.01]
- 14/00 Control of, monitoring of, or safety arrangements for, machines, pumps or pumping installations (of pumps or pumping installations specially adapted for elastic fluids F04C 28/00) [2006.01]
- specially adapted for several machines or pumps connected in series or in parallel [2006.01]
- specially adapted for reversible machines or pumps [2006.01]
- specially adapted for stopping, starting, idling or noload operation [2006.01]
- characterised by varying the rotational speed [2006.01]
- characterised by changing the positions of the inlet or outlet openings with respect to the working chamber [2006.01]
- 14/12 using sliding valves [2006.01]
- 14/14 • using rotating valves **[2006.01]**
- 14/16 • using lift valves [2006.01]
- 14/18 characterised by varying the volume of the working chamber (by changing the positions of inlet or outlet openings F04C 14/10) [2006.01]
- 14/20 by changing the form of the inner or outer contour of the working chamber [2006.01]
- 14/22 by changing the eccentricity between cooperating members [2006.01]
- characterised by using valves regulating pressure or flow rate, e.g. discharge valves (F04C 14/10 takes precedence) [2006.01]
- 14/26 • using bypass channels **[2006.01]**
- 14/28 Safety arrangements; Monitoring [2006.01]
- 15/00 Component parts, details or accessories of machines, pumps or pumping installations, not provided for in groups F04C 2/00-F04C 14/00 (of pumps specially adapted for elastic fluids F04C 18/00-F04C 29/00) [1, 2006.01]
- 15/06 Arrangements for admission or discharge of the working fluid, e.g. constructional features of the inlet or outlet [2006.01]

#### Pumps specially adapted for elastic fluids

**18/00** Rotary-piston pumps specially adapted for elastic fluids (with fluid ring or the like F04C 19/00; rotary-piston pumps in which the working-fluid is exclusively displaced by one or more reciprocating pistons F04B) [3, 2006.01]

#### Note(s) [3, 5]

Group F04C 18/30 takes precedence over groups F04C 18/02-F04C 18/24.

- of arcuate-engagement type, i.e. with circular translatory movement of co-operating members, each member having the same number of teeth or tooth-equivalents [3, 2006.01]
- 18/04 • of internal-axis type [3, 2006.01]
- 18/06 of other than internal-axis type (F04C 18/063 takes precedence) [3, 2006.01]
- 18/063 • with coaxially-mounted members having continuously-changing circumferential spacing between them [3, 2006.01]
- 18/067 • having cam-and-follower type drive [3, 2006.01]
- 18/07 • having crankshaft-and-connecting-rod type drive [3, 2006.01]
- 18/073 • having pawl-and-ratchet type drive [3, 2006.01]
- 18/077 • having toothed-gearing type drive **[3, 2006.01]**
- 18/08 of intermeshing-engagement type, i.e. with engagement of co-operating members similar to that of toothed gearing [3, 2006.01]
- 18/10 • of internal-axis type with the outer member having more teeth or tooth-equivalents, e.g. rollers, than the inner member [3, 2006.01]
- 18/107 • with helical teeth [3, 2006.01]
- 18/113 • the inner member carrying rollers intermeshing with the outer member [3, 2006.01]
- 18/12 • of other than internal-axis type **[3, 2006.01]**
- 18/14 • with toothed rotary pistons **[3, 2006.01]**
- 18/16 • with helical teeth, e.g. chevron-shaped, screw type [3, 2006.01]
- 18/18 • with similar tooth forms (F04C 18/16 takes precedence) [3, 2006.01]
- 18/20 • with dissimilar tooth forms (F04C 18/16 takes precedence) [3, 2006.01]
- of internal-axis type with equidirectional movement of co-operating members at the points of engagement, or with one of the co-operating members being stationary, the inner member having more teeth or tooth-equivalents than the outer member [3, 2006.01]
- of counter-engagement type, i.e. the movement of cooperating members at the points of engagement being in opposite directions [3, 2006.01]
- 18/26 • of internal-axis type **[3, 2006.01]**
- 18/28 • of other than internal-axis type **[3, 2006.01]**
- having the characteristics covered by two or more of groups F04C 18/02, F04C 18/08, F04C 18/22, F04C 18/24, F04C 18/48, or having the characteristics covered by one of these groups together with some other type of movement between co-operating members [3, 2006.01]
- 18/32 having both the movement defined in group F04C 18/02 and relative reciprocation between the co-operating members [3, 2006.01]
- 18/324 • with vanes hinged to the inner member and reciprocating with respect to the outer member [3, 2006.01]
- 18/328 • and hinged to the outer member **[3, 2006.01]**

F04D NON-POSITIVE-DISPLACEMENT PUMPS (engine fuel-injection pumps F02M; ion pumps H01J 41/12; electrodynamic pumps H02K 44/02)

#### Note(s)

- This subclass covers non-positive-displacement pumps for liquids, for elastic fluids, or for liquids and elastic fluids whether rotary or not having pure rotation.
- This subclass does not cover combinations of non-positive-displacement pumps with other pumps, which are covered by subclass F04B, except that the use of such other pumps for priming or boosting non-positive-displacement is covered by this subclass.
- Attention is drawn to the Notes preceding class F01, especially as regards the definition of "pump". 3.

#### Other non-positive-displacement pumps

35/00 Pumps producing waves in liquids, i.e. waveproducers (for bath tubs A47K 3/10) [2, 2006.01]

31/00 Pumping liquids and elastic fluids at the same time [1, 2006.01]

F04F PUMPING OF FLUID BY DIRECT CONTACT OF ANOTHER FLUID OR BY USING INERTIA OF FLUID TO BE PUMPED (containers or packages with special means for dispensing liquid or semi-liquid contents by internal gaseous pressure B65D 83/14); SIPHONS [2]

#### Note(s)

- 1. Attention is drawn to the Notes preceding class F01.
- Combinations of pumps covered by this subclass with other pumps are only classified in this subclass if such other pumps are intended for preliminary pumping for diffusion pumps.

#### **Subclass index**

PUMPS USING PRESSURE OR FLOW OF ANOTHER FLUID	1/00, 5/00
PUMPS USING NEGATIVE PRESSURE; PUMPS USING INERTIA OF THE FLUID	1/00, 3/00, 7/00
DIFFUSION PUMPS, e.g. WITH FORE PUMPS	
SIPHONS; OTHER PUMPS	
JET-PUMP INSTALLATIONS	

1/00	Pumps using positively or negatively pressurised fluid medium acting directly on the liquid to be
	<b>pumped</b> (using only negative pressure F04F 3/00; jet pumps F04F 5/00; siphons F04F 10/00) <b>[1, 2006.01]</b>

- using both positively and negatively pressurised fluid medium, e.g. alternating [1, 2006.01]
- 1/04 • generated by vaporising and condensing [1, 2006.01]
- the fluid medium acting on the surface of the liquid to be pumped (F04F 1/02 takes precedence) [1, 2006.01]
- specially adapted for raising liquids from great depths, e.g. in wells [1, 2006.01]
- 1/10 of multiple type, e.g. with two or more units in parallel (F04F 1/08 takes precedence) [1, 2006.01]
- 1/12 • in series **[1, 2006.01]**
- 1/14 • adapted to pump specific liquids, e.g. corrosive or hot liquids [1, 2006.01]
- 1/16 characterised by the fluid medium being suddenly pressurised, e.g. by explosion [1, 2006.01]
- 1/18 the fluid medium being mixed with, or generated from, the liquid to be pumped [1, 2006.01]
- specially adapted for raising liquids from great depths, e.g. in wells [1, 2006.01]
- 3/00 Pumps using negative pressure acting directly on the liquid to be pumped (siphons F04F 10/00) [1, 2006.01]
- 5/00 Jet pumps, i.e. devices in which fluid flow is induced by pressure drop caused by velocity of another fluid flow (diffusion pumps F04F 9/00; combination of jet pumps with pumps of other than jet type F04B; use of jet pumps for priming or boosting non-positive-displacement pumps F04D) [1, 2006.01]
- the inducing fluid being liquid [1, 2006.01]
- 5/04 • displacing elastic fluids **[1, 2006.01]**
- 5/06 • of rotary type **[1, 2006.01]**

- 5/08 • the elastic fluid being entrained in a free-falling column of liquid [1, 2006.01]
- 5/10 displacing liquids, e.g. containing solids, or liquids and elastic fluids [1, 2006.01]
- 5/12 • of multi-stage type **[1, 2006.01]**

- 5/50 • of compressing pumps **[1, 2006.01]**
- 5/52 • of evacuating pumps **[1, 2006.01]**

5/54 · Installations characterised by use of jet pumps, e.g. 9/04 • in combination with fore pumps, e.g. use of isolating combinations of two or more jet pumps of different valves [1, 2006.01] type **[1, 2006.01]** 9/06 • Arrangement of vapour traps [1, 2006.01] 9/08 • Control [1, 2006.01] Pumps displacing fluids by using inertia thereof, e.g. 7/00 by generating vibrations therein [1, 2006.01] Siphons [1, 2006.01] 10/00 7/02 • Hydraulic rams [1, 2006.01] 10/02 • Gravity-actuated siphons [1, 2006.01] 9/00 Diffusion pumps [1, 2006.01] 13/00 Pressure exchangers [2009.01] 9/02 • of multi-stage type [1, 2006.01] 99/00 Subject matter not provided for in other groups of

this subclass [2009.01]

#### **ENGINEERING IN GENERAL**

#### F15 FLUID-PRESSURE ACTUATORS; HYDRAULICS OR PNEUMATICS IN GENERAL

SYSTEMS ACTING BY MEANS OF FLUIDS IN GENERAL; FLUID-PRESSURE ACTUATORS, e.g. SERVOMOTORS; DETAILS OF FLUID-PRESSURE SYSTEMS, NOT OTHERWISE PROVIDED FOR (motors, turbines, compressors, blowers, pumps F01-F04; fluid dynamics F15D; fluid clutches or brakes F16D; fluid springs F16F; fluid gearing F16H; pistons, cylinders, packing F16J; valves, taps, cocks, actuating-floats F16K; safety valves with auxiliary fluid operation of the main valve F16K 17/10; fluid-operating means for valves F16K 31/12; pipes, pipe joints F16L; lubricating F16N)

#### Note(s)

In this subclass, the following terms are used with the meanings indicated:

- "telemotor" means a system or device in which a substantially constant amount of fluid is trapped between an input member and an output member to act as a fluid link;
- "servomotor" means a fluid-pressure actuator, e.g. a piston and cylinder, directly controlled by a valve or other device which is responsive to operation of an initial controlling member; "Servomotor" does not cover a telemotor. The initial controlling member may be adjacent to the servomotor or at a distance, and may be, for example, a hand lever.

TESTING; SAFETY	

### 1/00 Installations or systems with accumulators; Supply reservoir or sump assemblies [1, 2006.01]

- Installations or systems with accumulators (devices damping pulsations or vibrations in fluids for use in, or in connection with, pipes or pipe systems F16L 55/04) [1, 2006.01]
- 1/027 having accumulator charging devices (control of fluid pressure in general G05D 16/00) [6, 2006.01]
- 1/033 • with electrical control means **[6, 2006.01]**
- 1/04 Accumulators (connection of valves to inflatable elastic bodies B60C 29/00) [1, 2006.01]
- 1/08 • using a gas cushion; Gas charging devices; Indicators or floats therefor **[6, 2006.01]**
- 1/10 • with flexible separating means **[6, 2006.01]**
- 1/12 • • attached at their periphery (F15B 1/16 takes precedence) **[6, 2006.01]**
- 1/14 • • by means of a rigid annular supporting member **[6, 2006.01]**
- 1/16 • • in the form of a tube **[6, 2006.01]**
- 1/18 • • Anti-extrusion means **[6, 2006.01]**
- 1/20 • • fixed to the separating means **[6, 2006.01]**
- 1/22 • Liquid port constructions **[6, 2006.01]**
- 1/24 • with rigid separating means, e.g. pistons **[6, 2006.01]**
- 1/26 Supply reservoir or sump assemblies [6, 2006.01]

- 3/00 Intensifiers or fluid-pressure converters, e.g. pressure exchangers; Conveying pressure from one fluid system to another, without contact between the fluids [1, 2006.01]
- 5/00 Transducers converting variations of physical quantities, e.g. expressed by variations in positions of members, into fluid-pressure variations or vice versa; Varying fluid pressure as a function of variations of a plurality of fluid pressures or variations of other quantities (F15B 9/00 takes precedence; for measuring or controlling G01, G05) [1, 2006.01]

#### Fluid-pressure actuator systems

#### Note(s)

- 1. Groups F15B 7/00-F15B 21/00 cover systems in which members are moved into one or more definite positions by means of fluid pressure.
- Pump, motor, and control features so far as not peculiar to this purpose are classified in the relevant classes.
- 7/00 Fluid-pressure actuator systems in which the movement produced is definitely related to the output of a volumetric pump; Telemotors [1, 2006.01]
- Systems with continuously-operating input and output apparatus [1, 2006.01]

7/04	<ul> <li>in which the ratio between pump stroke and motor stroke varies with the resistance against the motor (in</li> </ul>	11/06	<ul> <li>involving features specific to the use of a compressible medium, e.g. air, steam [1, 2006.01]</li> </ul>

FLUID DYNAMICS, i.e. METHODS OR MEANS FOR INFLUENCING THE FLOW OF GASES OR LIQUIDS (fluid-F15D circuit elements F15C)

#### Note(s)

This subclass covers boundary-layer control and other arrangements and methods, not provided for in other classes, for influencing the flow of fluids relative to constraining surfaces and after leaving these surfaces, e.g. producing or removing turbulence, deflecting jets, guiding flow through bends in conduits, affecting distribution of fluid in a conduit, reducing fluid friction.

1/00	Influencing the flow of fluids [1, 2006.01]	1/08	<ul> <li>of jets leaving an orifice (nozzles or outlets with</li> </ul>
1/02	<ul> <li>in pipes or conduits [1, 2006.01]</li> </ul>		means for mechanically breaking-up or deflecting the

- F16 ENGINEERING ELEMENTS OR UNITS; GENERAL MEASURES FOR PRODUCING AND MAINTAINING EFFECTIVE FUNCTIONING OF MACHINES OR INSTALLATIONS; THERMAL INSULATION IN GENERAL
- F16B DEVICES FOR FASTENING OR SECURING CONSTRUCTIONAL ELEMENTS OR MACHINE PARTS TOGETHER, e.g. NAILS, BOLTS, CIRCLIPS, CLAMPS, CLIPS OR WEDGES; JOINTS OR JOINTING (couplings for transmitting rotation F16D)

Buckles slide fasteners

#### Note(s) [5, 2006.01]

Attention is drawn to:

- the Note following group E04B 1/38;
- the following places: b. A44B

A44D	Duckies, since fastellers
A47G 3/00	Ornamental heads for nails, screws, or the like
B42F 3/00	Means, not using staples, for attaching sheets temporarily together
E01B 9/10	Screws or bolts for railway sleepers
E01B 11/00	Rail joints
E04	Connections for building
E04D 13/08	Clamping means for down pipes for roof drainage
E04F 13/21	Fastening means specially adapted for covering or lining elements for buildings
E04G 5/04	Fastening scaffolds against buildings
E04G 7/00	Scaffolding couplings
E05C	Bolts or fasteners for wings, specially for doors or windows
F16C 29/10	Locking bearings for parts moving only linearly
F16G 17/00	Hooks as integral parts of chains
F16L	Pipe joints
F16L 3/00	Supports for pipes, cables or protective tubing, e.g. hangers, holders, clamps, cleats, clips, brackets
F16L 33/02	Clips for connecting hoses to rigid members
H01F 7/00	Magnetic holding devices
H02N 13/00	Electrostatic holding devices.

	<b>TYPES</b>	OF	FAS:	ΓΕΝ	IINC
--	--------------	----	------	-----	------

YPES OF FASTENING	
By: clamping, wedging	2/00, 3/00
By: shrinking or force fit; sticking or pressing together; penetration of one member into a hole in	n
another	
Fastening of plates, strips, bars, or tubes together or to flat surfaces	5/00, 7/00, 9/00
For specific applications	
for furniture	12/00

for fixing in walls	13/00
by screw-thread modified in view of tensile load	31/00
FASTENING MEANS	
General	
clamps; clips; wedges, keys	2/00, 3/00
dowels	
other fastening means	1/00, 45/00, 47/00
Without screw-thread	
nails, staples; bolts, pins, or rivets	
locking stud-and-socket fastenings against axial movement	21/00
With screw-thread	
screws; bolts, break-bolts, nuts	25/00, 15/06, 27/00, 27/00, 31/00,
	35/00, 37/00
features common to bolts and screws	23/00, 27/00, 33/00
deformation of nut or equivalent while fastening; locking of screws, bolts, or nuts	
Accessories for fastening means	41/00, 43/00

# 1/00 Devices for securing together, or preventing relative movement between, constructional elements or machine parts [1, 2006.01]

#### Note(s) [2]

Groups F16B 2/00-F16B 47/00 take precedence over group F16B 1/00.

- Means for securing elements of mechanisms after operation (means for bringing members to rest F16D) [1, 2006.01]
- disengaged by movement of the actuating member of the element (locking of actuators G05G, e.g. G05G 5/00) [1, 2006.01]

### <u>Fastenings for constructional elements or machine parts in general</u>

- **2/00 Friction-grip releasable fastenings** (for cables or ropes, e.g. cleats, F16G 11/00; supports for pipes, cables or protective tubing F16L 3/00) **[1, 2006.01]**
- Clamps, i.e. with gripping action effected by positive means other than the inherent resistance to deformation of the material of the fastening [1, 2006.01]
- 2/04 internal, i.e. with spreading action (F16B 2/14-F16B 2/18 take precedence) [1, 2006.01]
- 2/06 external, i.e. with contracting action (F16B 2/14-F16B 2/18 take precedence) [1, 2006.01]
- 2/08 • using bands (clips for connecting hoses to rigid members F16L 33/02) [1, 2006.01]
- 2/10 • using pivoting jaws [1, 2006.01]
- 2/12 • using sliding jaws **[1, 2006.01]**
- 2/14 using wedges **[1, 2006.01]**
- 2/16 using rollers or balls **[1, 2006.01]**
- 2/18 using cams, levers, eccentrics, or toggles **[1, 2006.01]**
- Clips, i.e. with gripping action effected solely by the inherent resistance to deformation of the material of the fastening [1, 2006.01]
- 2/22 • of resilient material, e.g. rubbery material [1, 2006.01]
- 2/24 • of metal [1, 2006.01]
- of pliable non-resilient material, e.g. plant tie [1, 2006.01]

- **3/00 Key-type connections; Keys** (F16B 2/00 takes precedence; for rods or tubes mutually F16B 7/00) [1, 2006.01]
- using keys formed of wire or other flexible material, to be inserted through an opening giving access to grooves in the adjacent surfaces of the parts to be connected [1, 2006.01]
- 3/06 using taper sleeves [1, 2006.01]
- 4/00 Shrinkage connection, e.g. assembled with the parts at different temperature; Force fits (restricted to metal parts or objects B23P 11/02); Non-releasable frictiongrip fastenings (F16B 2/00 takes precedence) [1, 2006.01]
- 5/00 Joining sheets or plates to one another or to strips or bars parallel to them (by sticking together F16B 11/00; dowel connections F16B 13/00; pins, including deformable elements F16B 19/00; covering of walls E04F 13/00; fastening signs, plates, panels, or boards to a supporting structure, fastening readily-detachable elements, e.g. letters, to signs, plates, panels, or boards, G09F 7/00) [1, 2006.01]
- by means of fastening elements specially adapted for honeycomb panels [1, 2006.01]
- by means of fastening members using screw-thread (construction of screw-threaded connections F16B 25/00-F16B 39/00) [1, 2006.01]
- 5/04 by means of riveting (rivets F16B 19/04) [1, 2006.01]
- by means of clamps or clips (friction-grip releasable fastenings in general F16B 2/00) [1, 2006.01]
- 5/07 by means of multiple interengaging protrusions on the surfaces, e.g. hooks, coils [1, 2006.01]
- 5/08 by means of welds or the like (welding B23K) **[1, 2006.01]**
- 5/10 by means of bayonet connections (fastening devices locking by rotation F16B 21/02) [1, 2006.01]
- Fastening strips or bars to sheets or plates, e.g. rubber strips, decorative strips for motor vehicles, by means of clips (friction-grip releasable fastenings in general F16B 2/00; fastening rods or tubular parts to flat surfaces at an angle F16B 9/00; clips for connecting hoses to rigid members F16L 33/02) [1, 2006.01]

F16C SHAFTS; FLEXIBLE SHAFTS; MECHANICAL MEANS FOR TRANSMITTING MOVEMENT IN A FLEXIBLE SHEATHING; ELEMENTS OF CRANKSHAFT MECHANISMS; PIVOTS; PIVOTAL CONNECTIONS; ROTARY ENGINEERING ELEMENTS OTHER THAN GEARING, COUPLING, CLUTCH OR BRAKE ELEMENTS; BEARINGS [5]

#### Note(s)

In this subclass, the following expression is used with the meaning indicated:

"rotary engineering elements other than gearing, coupling, clutch or brake elements" covers any engineering element other than
gearing, coupling, clutch or brake elements which rotates in so far as its features are affected only by the fact that it rotates.

#### Subclass index

FLEXIBLE TRANSMISSIONS, SHAFTS, AXLES, CRANKS, ECCENTRICS	1/00, 3/00
CROSSHEADS, CONNECTING-RODS	5/00, 7/00, 9/00
PIVOTS	11/00
ROLLS, DRUMS, DISCS	13/00
BEARINGS	
For rotatable parts	13/00, 17/00-27/00
For linearly-movable parts	29/00
For parts which both rotate and move linearly	
For crankshafts or connecting- rods	9/00
Not otherwise provided for	32/00
Supports; parts or accessories	27/00, 35/00, 33/00, 41/00
Cooling; relieving load	37/00, 39/00
MAKING, ASSEMBLING	
CONSTRUCTION OF ROTATABLE BODIES TO RESIST CENTRIFUGAL FORCE	15/00

1/00	Flexible shafts (flexible shafts in dental machines for
	boring or cutting A61C 1/18); Mechanical means for
	transmitting movement in a flexible
	sheathing [1, 2006.01]

- for conveying rotary movements [1, 2006.01]
- 1/04 • Articulated shafts [1, 2006.01]
- with guiding-sheathing, tube, or box (F16C 1/04 takes precedence; guiding-sheathings F16C 1/26) [1, 2006.01]
- 1/08 • End connections [1, 2006.01]
- Means for transmitting linear movement in a flexible sheathing, e.g. "Bowden mechanisms" (guidingsheathings F16C 1/26) [1, 2006.01]
- 1/12 Arrangements for transmitting movement to or from the flexible member [1, 2006.01]
- 1/14 • Construction of the end-piece of the flexible member; Attachment thereof to the flexible member [1, 2006.01]
- 1/16 • in which the end-piece is guided rectilinearly [1, 2006.01]
- 1/18 • in which the end portion of the flexible member is laid along a curved surface of a pivoted member [1, 2006.01]
- 1/20 Construction of flexible members moved to and fro in the sheathing **[1, 2006.01]**
- 1/22 Adjusting; Compensating length [1, 2006.01]
- 1/24 Lubrication; Lubricating equipment [1, 2006.01]
- Construction of guiding-sheathings or guidingtubes [1, 2006.01]
- 1/28 • with built-in bearings **[1, 2006.01]**
- 3/00 Shafts (flexible shafts F16C 1/00; marine propeller shafts, paddle wheel shafts B63H 23/34); Axles; Cranks; Eccentrics [1, 2006.01]
- 3/02 Shafts; Axles [1, 2006.01]
- 3/03 • telescopic **[1, 2006.01]**
- 3/035 • with built-in bearings **[1, 2006.01]**

- 3/04 Crankshafts, eccentric-shafts; Cranks, eccentrics [1, 2006.01]
- 3/06 • Crankshafts [1, 2006.01]
- 3/08 • made in one piece (features relating to lubrication F16C 3/14, to cooling F16C 3/16) [1, 2006.01]
- 3/10 • assembled of several parts, e.g. by welding **[1, 2006.01]**
- 3/12 • releasably connected **[1, 2006.01]**
- 3/14 • Features relating to lubrication [1, 2006.01]
- 3/16 • Features relating to cooling **[1, 2006.01]**
- 3/18 • Eccentric-shafts [1, 2006.01]
- 3/20 Shape of crankshafts or eccentric-shafts having regard to balancing [1, 2006.01]
- 3/22 Cranks; Eccentrics (constructional features of crank-pins F16C 11/02) [1, 2006.01]
- 3/24 • with return cranks, i.e. a second crank carried by the crank-pin [1, 2006.01]
- 3/26 • Elastic crank-webs; Resiliently-mounted crank-pins [1, 2006.01]
- 3/28 • Adjustable cranks or eccentrics **[1, 2006.01]**
- 3/30 • with arrangements for overcoming deadcentres [1, 2006.01]
- 5/00 Crossheads; Constructions of connecting-rod heads or piston-rod connections rigid with crossheads (piston-rods, i.e. rods rigidly connected to the piston, F16J 7/00) [1, 2006.01]
- 7/00 Connecting-rods or like links pivoted at both ends (coupling-rods for locomotive driving-wheels B61C 17/10); Construction of connecting-rod heads (heads rigid with crossheads F16C 5/00) [1, 2006.01]
- 7/02 Constructions of connecting-rods with constant length [1, 2006.01]
- 7/04 with elastic intermediate part or fluid cushion [1, 2006.01]

#### **Couplings**

- 1/00 Couplings for rigidly connecting two coaxial shafts or other movable machine elements (for attachment of cranks to their shafts F16C 3/10) [1, 2006.01]
- 1/02 for connecting two abutting shafts or the like [1, 2006.01]
- 1/027 • non-disconnectable, e.g. involving gluing, welding or the like **[6, 2006.01]**
- 1/033 • by clamping together two faces perpendicular to the axis of rotation, e.g. with bolted flanges [6, 2006.01]
- 1/04 with clamping hub; with hub and longitudinal key [1, 2006.01]
- • with radial clamping due to axial loading of at least one pair of conical surfaces [5, 2006.01]
- for attachment of a member on a shaft or on a shaft-end (attachment of marine propellers on shafts B63H 23/34) [1, 2006.01]
- 1/064 • non-disconnectable **[6, 2006.01]**
- 1/068 • involving gluing, welding or the like **[6, 2006.01]**
- 1/072 • involving plastic deformation (plastic welding F16D 1/068) **[6, 2006.01]**
- 1/076 by clamping together two faces perpendicular to the axis of rotation, e.g. with bolted flanges [6, 2006.01]
- 1/08 with clamping hub; with hub and longitudinal key [1, 2006.01]
- 1/09 • with radial clamping due to axial loading of at least one pair of conical surfaces [5, 2006.01]
- 1/091 • • and comprising a chamber including a tapered piston moved axially by fluid pressure to effect clamping [2006.01]
- 1/092 • the pair of conical mating surfaces being provided on the coupled hub and shaft [2006.01]
- using one or more elastic or segmented conical rings forming at least one of the conical surfaces, the rings being expanded or contracted to effect clamping (F16D 1/091 takes precedence) [2006.01]
- 1/094 • • using one or more pairs of elastic or segmented rings with mutually mating conical surfaces, one of the mating rings being contracted and the other being expanded [2006.01]
- 1/095 • • with clamping effected by ring contraction only [2006.01]
- 1/096 • • the ring or rings being located between the shaft and the hub [2006.01]
- 1/097 • • with clamping effected by ring expansion only, e.g. with an expanded ring located between hub and shaft [2006.01]
- 1/10 Quick-acting couplings in which the parts are connected by simply bringing them together axially [1, 2006.01]
- 1/104 having retaining means rotating with the coupling and acting only by friction **[6, 2006.01]**
- 1/108 having retaining means rotating with the coupling and acting by interengaging parts, i.e. positive coupling **[6, 2006.01]**
- 1/112 • the interengaging parts comprising torquetransmitting surfaces, e.g. bayonet joints [6, 2006.01]

- 1/116 • the interengaging parts including a continuous or interrupted circumferential groove in the surface of one of the coupling parts (circlips for retaining hubs on shafts

  F16B 21/18) [6, 2006.01]
- 1/12 allowing adjustment of the parts about the axis (during motion F16D 3/10) [1, 2006.01]
- 3/00 Yielding couplings, i.e. with means permitting movement between the connected parts during the drive (couplings disconnectable simply by axial movement F16D 1/10; slip couplings F16D 7/00; fluid couplings F16D 31/00-F16D 39/00) [1, 2006.01]
- 3/02 adapted to specific functions (universal joints, <u>see</u> the appropriate groups) [1, 2006.01]
- 3/04 specially adapted to allow radial displacement, e.g. Oldham couplings [1, 2006.01]
- 3/06 • specially adapted to allow axial displacement [1, 2006.01]
- 3/08 • Couplings for intersecting shafts, provided with intermediate bars bent in an angle corresponding with the angle of intersection [1, 2006.01]
- 3/10 Couplings with means for varying the angular relationship of two coaxial shafts during motion [1, 2006.01]
- 3/12 specially adapted for accumulation of energy to absorb shocks or vibration (by making use of fluid elements F16D 3/80) [1, 2006.01]
- 3/14 combined with a friction coupling for damping vibration or absorbing shock [1, 2006.01]
- Universal joints in which flexibility is produced by means of pivots or sliding or rolling connecting parts [1, 2006.01]
- 3/18 the coupling parts having slidably-interengaging teeth [1, 2006.01]

## Note(s) [4]

In this group, the following expression is used with the meaning indicated:

- "coupling parts" means the driving member and the driven member of the coupling, which are mounted on, and rotate as a unit with, the shafts or their equivalents between which the coupling is placed. An intermediate member interconnecting these parts is regarded as such an equivalent.
- 3/19 • of resilient material or structure **[1, 2006.01]**
- one coupling part entering a sleeve of the other coupling part and connected thereto by sliding or rolling members (F16D 3/18, F16D 3/24 take precedence) [1, 4, 5, 2006.01]
- 3/202 • one coupling part having radially projecting pins, e.g. tripod joints [5, 2006.01]
- 3/205 • the pins extending radially outwardly from the coupling part **[5, 2006.01]**
- 3/207 • the pins extending radially inwardly from the coupling part **[5, 2006.01]**
- 3/22 • the rolling members being balls, rollers, or the like, guided in grooves or sockets in both coupling parts [1, 3, 5, 2006.01]
- 3/221 • the rolling members being located in sockets in one of the coupling parts **[5, 2006.01]**
- 3/223 • • the rolling members being guided in grooves in both coupling parts [5, 2006.01, 2011.01]
- 3/2233 • • where the track is made up of two curves with a point of inflexion in between, i.e. S-track joints [2011.01]

3/2237 •	•	•	•	•	•	where the grooves are composed of radii and adjoining straight lines, i.e. undercut	3/52	•	•	comprising a continuous strip, spring, or the like engaging the coupling parts at a number of
						free [UF] type joints <b>[2011.01]</b>				places [1, 2006.01]
3/224 •	•	•	•	•		the groove centre-lines of each coupling part lying on a sphere [5, 2006.01, 2011.01]	3/54	•	•	Couplings comprising a chain or strip surrounding two wheels arranged side by side and provided with teeth or the equivalent [1, 2006.01]
0.400.45						-	D./E.C			
3/2245 •		•	•	•	•	• where the groove centres are offset from the joint centre [2011.01]	3/56	•	•	comprising elastic metal lamellae, elastic rods, or the like, e.g. arranged radially or parallel to the axis, the members being shear-loaded collectively
3/226 •	•	•	•	•	•	the groove centre-lines of each coupling part lying on a cylinder co-axial with the				by the total load [1, 2006.01]
						respective coupling part [5, 2006.01]	3/58	•	•	• the intermediate members being made of rubber
3/227 • 3/229 •		•	•	•	•	• the joints being telescopic <b>[5, 2006.01]</b> Prismatic coupling parts having each	3/60			or like material <b>[1, 2006.01]</b> comprising pushing or pulling links attached to
3/229		•	•	•		groove centre-line lying on planes parallel	3/00			both parts (F16D 3/64 takes
						to the axis of the respective coupling part				precedence) [1, 2006.01]
						(F16D 3/224, F16D 3/226 take precedence) <b>[5, 2006.01]</b>	3/62	•	•	the links or their attachments being elastic [1, 2006.01]

made of plastics, e.g. rubber; made of material having 5/00 high internal friction [1, 2006.01] made of steel wool or compressed 1/362 hair **[6, 2006.01]** 1/364 made of cork, wood or the like 6/00 material **[6, 2006.01]** 1/366 made of fibre reinforced plastics [6, 2006.01] • Leaf springs [6, 2006.01] 1/368 7/00 1/37 of foam-like material, e.g. sponge rubber [1, 2006.01] 1/371 • • characterised by inserts or auxiliary extension 7/01 elements, e.g. for rigidification (F16F 1/366, F16F 1/387 take precedence) **[6, 2006.01]** 7/02 characterised by having a particular 1/373 shape **[6, 2006.01]** 1/374 • • • having a spherical or the like shape **[6, 2006.01]** 7/04 having projections, studs, serrations or the like 1/376 • • • 7/06 on at least one surface (F16F 1/387 takes precedence) [6, 2006.01] 7/08 having holes or openings (F16F 1/387 takes precedence) [6, 2006.01] 1/379 characterised by arrangements for regulating the 7/09 spring temperature, e.g. by cooling [6, 2006.01] 1/38 with a sleeve of elastic material between a rigid 7/10 outer sleeve and a rigid inner sleeve or 7/104 pin [1, 2006.01] 1/387 comprising means for modifying the rigidity in 7/108 particular directions [6, 2006.01] 7/112 1/393 with spherical or conical sleeves [6, 2006.01] 7/116 1/40 consisting of a stack of similar elements separated 7/12 by non-elastic intermediate layers [1, 2006.01] 7/14 1/41 the spring consisting of generally conically arranged elements [6, 2006.01] characterised by the mode of 1/42 9/00 Springs, vibration-dampers, shock-absorbers, or stressing [1, 2006.01] 1/44 loaded mainly in compression [1, 2006.01] loaded mainly in tension [1, 2006.01] 1/46 1/48 loaded mainly in torsion [1, 2006.01] 1/50 • • loaded mainly in shear [1, 2006.01] E05F) [1, 2006.01] 1/52 loaded in combined stresses [1, 2006.01] 9/02 1/54 • • • loaded in compression and 9/04 shear [1, 2006.01] 9/05 3/00 Spring units consisting of several springs, e.g. for obtaining a desired spring characteristic (including 9/06 fluid springs F16F 5/00, F16F 13/00) [1, 2006.01] 9/08 3/02 with springs made of steel or of other material having 9/084 low internal friction [1, 2006.01] 3/04 • composed only of wound springs [1, 2006.01] 3/06 of which some are placed around others in such a way that they damp each other by mutual 9/088 friction [1, 2006.01] 3/07 · · combined with chambers filled with gas or liquid [1, 2006.01] 3/08 9/092 with springs made of a material having high internal friction, e.g. rubber [1, 2006.01] 3/087 Units comprising several springs made of plastics or the like material (F16F 1/40 takes 9/096 precedence) [6, 2006.01] 3/093 the springs being of different materials, e.g. having different types of rubber [6, 2006.01]

combined with springs made of steel or other

material having low internal friction [1, 2006.01]

the steel spring being in contact with the rubber

spring, e.g. being embedded in it [6, 2006.01]

3/10

3/12

- Liquid springs in which the liquid works as a spring by compression, e.g. combined with throttling action; Combinations of devices including liquid springs [1, 2006.01]
- Magnetic springs; Fluid magnetic springs [1, 2006.01]
- Vibration-dampers; Shock-absorbers (using fluid F16F 5/00, F16F 9/00; specific for rotary systems F16F 15/10) [1, 2006.01]
- · using friction between loose particles, e.g. sand [6, 2006.01]
- with relatively-rotatable friction surfaces that are pressed together (F16F 7/01 takes precedence; one of the members being a spring F16F 13/02) [1, 6, 2006.01]
- in the direction of the axis of rotation [1, 2006.01]
- in a direction perpendicular or inclined to the axis of rotation [1, 2006.01]
- with friction surfaces rectilinearly movable along each other (F16F 7/01 takes precedence) [1, 6, 2006.01]
- in dampers of the cylinder-and-piston type **[6, 2006.01]**
- using inertia effect [1, 2006.01]
- the inertia member being resiliently mounted [6, 2006.01]
- on plastics springs [6, 2006.01]
- • on fluid springs **[6, 2006.01]**
- • on metal springs **[6, 2006.01]**
- using plastic deformation of members [1, 2006.01]
- of cable-support type, i.e. frictionally-engaged loopforming cables **[1, 2006.01]**
- similarly-constructed movement-dampers using a fluid or the equivalent as damping medium (F16F 5/00 takes precedence; connection of valves to inflatable elastic bodies B60C 29/00; door-operating appliances with fluid braking systems
- using gas only [1, 2006.01]
- in a chamber with a flexible wall [1, 2006.01]
- the flexible wall being of the rolling diaphragm type [5, 2006.01]
- using both gas and liquid [1, 2006.01]
- • in a chamber with a flexible wall [1, 2006.01]
- comprising a gas spring contained within a flexible wall, the wall not being in contact with the damping fluid, i.e. mounted externally on the damper cylinder [6, 2006.01]
- comprising a gas spring with a flexible wall provided within the cylinder on the piston rod of a monotubular damper or within the inner tube of a bitubular damper [6, 2006.01]
- comprising a gas spring with a flexible wall provided between the tubes of a bitubular damper [6, 2006.01]
- comprising a hydropneumatic accumulator of the membrane type provided on the upper or the lower end of a damper or separately from or laterally on the damper [6, 2006.01]
- 9/10 · using liquid only; using a fluid of which the nature is immaterial [1, 2006.01]
- 9/12 Devices with one or more rotary vanes turning in the fluid, any throttling effect being immaterial [1, 2006.01]

9/14	• • Devices with one or more members, e.g. pistons, vanes, moving to and fro in chambers and using	9/53	<ul> <li>Means for adjusting damping characteristics by varying fluid viscosity, e.g.</li> </ul>

#### F16H **GEARING**

## Note(s) [5, 2009.01]

- Combinations including mechanical gearings are classified in groups F16H 37/00or F16H 47/00, unless they are provided for in groups F16H 1/00-F16H 35/00.
- In this subclass, sets of rigidly-connected members are regarded as single members.
- 3. In this subclass, the following terms or expressions are used with the meanings indicated:
  - "toothed gearing" includes worm gearing and other gearing involving at least one wheel or sector provided with teeth or the equivalent, except gearing with chains or toothed belts, which is treated as friction gearing;
  - "conveying motion" includes transmitting energy, and means that the applied and resultant motions are of the same kind, though they may differ in, e.g. speed, direction or extent;
  - "rotary" implies that the motion may continue indefinitely.
  - "oscillating" means moving about an axis to an extent which is limited by the construction of the gearing and which may exceed one revolution, the movement being alternately forwards and backwards during continued operation of the gearing;
  - "reciprocating" means moving substantially in a straight line, the movement being alternately forwards and backwards during continued operation of the gearing;
  - "reversing" or "reversal" means that an applied movement in one direction may produce a resultant movement in either of two opposed directions at will;
  - "central gears" includes any gears whose axis is the main axis of the gearing.
- Attention is drawn to the following places:

A01D 69/06	Gearings in harvesters or mowers
A63H 31/00	Gearing for toys
B21B 35/12	Toothed-wheel gearing for metal-rolling mills
B60K	Arrangement of transmissions in vehicles
B61C 9/00	Transmissions for railway locomotives
B62D 3/00	Vehicle steering gears
B62M	Transmissions for cycles
В63Н 23/00	Transmissions for marine propulsion
B63H 25/00	Marine steering gears
F01-F04	Machines, engines, pumps
F15B 15/00	Gearings associated with fluid-actuated devices
G01D 5/04	Gearing used in indicating or recording apparatus in connection with measuring devices
H03J 1/00	Driving arrangements for tuning resonant circuits
H04L 13/04	Driving mechanisms for apparatus for transmission of coded digital information.

CONTROL	
of change-speed- or reversing-gearings conveying rotary motion	59/00-63/00
COMBINATIONS OF GEARINGS; DIFFERENTIAL GEARINGS; OTHER GEARINGS	47/00, 48/00, 49/00
GENERAL DETAILS OF GEARINGS	57/00

#### **Toothed gearings for conveying rotary motion**

- 1/00 Toothed gearings for conveying rotary motion (specific for conveying rotary motion with variable gear ratio or for reversing rotary motion F16H 3/00) [1, 2006.01]
- 1/02 without gears having orbital motion [1, 2006.01]
- 1/04 involving only two intermeshing members [1, 2006.01]
- 1/06 • with parallel axes **[1, 2006.01]**
- 1/08 • the members having helical, herring-bone, or like teeth [1, 2006.01]
- 1/10 • one of the members being internally toothed [1, 2006.01]
- 1/12 • with non-parallel axes **[1, 2006.01]**
- 1/14 • comprising conical gears only **[1, 2006.01]**
- 1/16 • comprising worm and worm-wheel **[1, 2006.01]**
- 1/18 • the members having helical, herring-bone, or like teeth (F16H 1/14 takes precedence) [1, 2006.01]
- 1/20 • involving more than two intermeshing members [1, 2006.01]
- 1/22 • with a plurality of driving or driven shafts; with arrangements for dividing torque between two or more intermediate shafts [1, 2006.01]
- 1/24 involving gears essentially having intermeshing elements other than involute or cycloidal teeth (F16H 1/16 takes precedence) [1, 2006.01]
- • Special means compensating for misalignment of axes [1, 2006.01]
- 1/28 with gears having orbital motion [1, 2006.01]
- in which an orbital gear has an axis crossing the main axis of the gearing and has helical teeth or is a worm [1, 2006.01]
- 1/32 in which the central axis of the gearing lies inside the periphery of an orbital gear [1, 2006.01]
- 1/34 involving gears essentially having intermeshing elements other than involute or cycloidal teeth (in worm gearing F16H 1/30) [1, 2006.01]
- 1/36 with two central gears coupled by intermeshing orbital gears [1, 2006.01]
- 1/46 Systems consisting of a plurality of gear trains, each with orbital gears [1, 2006.01]
- Special means compensating for misalignment of axes [1, 2006.01]
- 3/00 Toothed gearings for conveying rotary motion with variable gear ratio or for reversing rotary motion (speed-changing or reversing mechanisms F16H 59/00-F16H 63/00) [1, 2006.01]
- without gears having orbital motion [1, 2006.01]
- 3/04 • with internally-toothed gears [1, 2006.01]
- with worm and worm-wheel or gears essentially having helical or herring-bone teeth [1, 2006.01]
- exclusively or essentially with continuouslymeshing gears, that can be disengaged from their shafts [1, 2006.01]

### Note(s) [2006.01]

In this group, gears which can be put out of mesh are not taken into consideration if they are used for reversal only.

- 3/083 • with radially acting and axially controlled clutching members, e.g. sliding keys [5, 2006.01]
- 3/085 • with more than one output shaft **[5, 2006.01]**

3/087 • • • characterised by the disposition of the gears (F16H 3/083, F16H 3/085 take precedence) **[5, 2006.01]** 

#### Note(s) [5]

When counting the countershafts, the reverse countershaft is not taken into consideration if it is used for reversal only.

- 3/089 • all of the meshing gears being supported by a pair of parallel shafts, one being the input shaft and the other the output shaft, there being no countershaft involved [5, 2006.01]
- 3/091 • including a single countershaft **[5, 2006.01]**
- 3/093 • with two or more countershafts **[5, 2006.01]**
- 3/095 • • with means for ensuring an even distribution of torque between the countershafts [5, 2006.01]
- 3/097 • • the input and output shafts being aligned on the same axis **[5, 2006.01]**
- 3/10 • with one or more one-way clutches as an essential feature [1, 2006.01]
- 3/12 • with means for synchronisation not incorporated in the clutches (synchronised clutches F16D 23/02) [1, 2006.01]
- 3/14 • Gearings for reversal only **[1, 2006.01]**
- sessentially with both gears that can be put out of gear and continuously-meshing gears that can be disengaged from their shafts [1, 2006.01]

#### Note(s) [2006.01]

In this group, gears which can be put out of mesh are not taken into consideration if they are used for reversal only.

- 3/18 • Gearings for reversal only **[1, 2006.01]**
- exclusively or essentially using gears that can be moved out of gear [1, 2006.01]

#### Note(s) [2006.01]

In this group, gears which can be put out of mesh are not taken into consideration if they are used for reversal only.

- 3/22 • with gears shiftable only axially [1, 2006.01]
- 3/24 • • with driving and driven shafts coaxial [1, 2006.01]
- 3/26 • • and two or more additional shafts **[1, 2006.01]**
- 3/28 • • an additional shaft being coaxial with the main shafts [1, 2006.01]
- 3/30 • with driving and driven shafts not coaxial [1, 2006.01]
- 3/32 • • and an additional shaft [1, 2006.01]
- 3/34 • with gears shiftable otherwise than only axially [1, 2006.01]
- with a single gear meshable with any of a set of coaxial gears of different diameters [1, 2006.01]
- 3/38 • with synchro-meshing **[1, 2006.01]**
- 3/40 • Gearings for reversal only **[1, 2006.01]**
- with gears having teeth formed or arranged for obtaining multiple gear ratios, e.g. nearly infinitely variable [1, 2006.01]
- using gears having orbital motion [1, 2006.01]
- Gearings having only two central gears, connected by orbital gears (F16H 3/68-F16H 3/78 take precedence) [1, 2006.01]
- with single orbital gears or pairs of rigidlyconnected orbital gears [1, 2006.01]

3/50	• • • comprising orbital conical gears [1, 2006.01]
3/52	• • • comprising orbital spur gears [1, 2006.01]
3/54	• • • • one of the central gears being internally
	toothed and the other externally
	toothed <b>[1, 2006.01]</b>
3/56	<ul> <li>• • • both central gears being sun</li> </ul>
	gears [1, 2006.01]
3/58	<ul> <li>• with sets of orbital gears, each consisting of</li> </ul>
	two or more intermeshing orbital
	gears [1, 2006.01]
3/60	• • • Gearings for reversal only [1, 2006.01]
3/62	Gearings having three or more central gears
	(F16H 3/68-F16H 3/78 take
2.5.	precedence) [1, 2006.01]
3/64	• • composed of a number of gear trains, the drive
	always passing through all the trains, each train having not more than one connection for
	driving another train [1, 2006.01]
3/66	• • • composed of a number of gear trains without
3700	drive passing from one train to
	another [1, 2006.01]
3/68	<ul> <li>in which an orbital gear has an axis crossing the</li> </ul>
0,00	main axis of the gearing and has helical teeth or is
	a worm <b>[1, 2006.01]</b>
3/70	<ul> <li>in which the central axis of the gearing lies inside</li> </ul>
	the periphery of an orbital gear [1, 2006.01]
3/72	<ul> <li>with a secondary drive, e.g. regulating motor, in</li> </ul>
	order to vary speed continuously [1, 2006.01]
3/74	<ul> <li>Complexes, not using actuatable speed-changing</li> </ul>
	or regulating members, e.g. with gear ratio
	determined by free play of frictional or other
0 / <b>=</b> 0	forces [1, 2006.01]
3/76	with an orbital gear having teeth formed or
	arranged for obtaining multiple gear ratios, e.g. nearly infinitely variable [1, 2006.01]
3/78	
3//B	<ul> <li>Special adaptation of synchronisation mechanisms to these gearings [1, 2006.01]</li> </ul>
	to these gearings [1, 2000.01]

## Gearing for conveying rotary motion by endless flexible members

7/00	Gearings for conveying rotary motion by endless
	<b>flexible members</b> (specific for conveying rotary motion
	with variable gear ratio or for reversing rotary motion
	F16H 9/00; endless flexible members per se, e.g. belts
	or chains F16G) [1, 2006.01]
7/02	<ul> <li>with belts; with V-belts [1, 2006.01]</li> </ul>
7/04	<ul> <li>with ropes [1, 2006.01]</li> </ul>
7/06	• with chains [1, 2006.01]

- 7/08 Means for varying tension of belts, ropes, or chains (pulleys of adjustable construction F16H 55/52) **[1, 2006.01]**
- 7/10 • by adjusting the axis of a pulley **[1, 2006.01]**
- 7/12 • of an idle pulley **[1, 2006.01]**
- 7/14 • of a driving or driven pulley **[1, 2006.01]**
- 7/16 • without adjusting the driving or driven shaft [1, 2006.01]
- Means for guiding or supporting belts, ropes, or chains (construction of pulleys F16H 55/36) [1, 2006.01]
- 7/20 • Mountings for rollers or pulleys [1, 2006.01]
- 7/22 Belt, rope, or chain shifters **[1, 2006.01]**
- Equipment for mounting belts, ropes, or chains [1, 2006.01]

- 9/00 Gearings for conveying rotary motion with variable gear ratio, or for reversing rotary motion, by endless flexible members (control of change-speed or reversing-gearings conveying rotary motion F16H 59/00-F16H 63/00; endless flexible members per se, e.g. belts or chains F16G) [1, 2006.01]
- 9/02 without members having orbital motion [1, 2006.01]
- 9/04 using belts, V-belts, or ropes (with toothed belts F16H 9/24; pulleys of adjustable construction F16H 55/52) [1, 2006.01]
- 9/06 • engaging a stepped pulley **[1, 2006.01]**
- 9/08 • engaging a conical drum (F16H 9/12 takes precedence) [1, 2006.01]
- 9/10 • engaging a pulley provided with radiallyactuatable elements carrying the belt [1, 2006.01]
- 9/12 • engaging a pulley built-up out of relatively axially-adjustable parts in which the belt engages the opposite flanges of the pulley directly without interposed belt-supporting members [1, 2006.01]
- 9/14 • using only one pulley built-up out of adjustable conical parts [1, 2006.01]
- 9/16 • using two pulleys, both built-up out of adjustable conical parts [1, 2006.01]
- 9/18 • • only one flange of each pulley being adjustable [1, 2006.01]
- 9/20 • • both flanges of the pulleys being adjustable [1, 2006.01]
- 9/22 • specially adapted for ropes **[1, 2006.01]**
- 9/24
   using chains, toothed belts, belts in the form of links; Chains or belts specially adapted to such gearing (toothed belts F16G 1/28; V-belts in the form of links F16G 5/18; toothed V-belts F16G 5/20) [1, 2006.01]
- 9/26 with members having orbital motion [1, 2006.01]

#### Other friction gearing for conveying rotary motion

- 13/00 Gearing for conveying rotary motion with constant gear ratio by friction between rotary members (specific for conveying rotary motion with variable gear ratio or for reversing rotary motion F16H 15/00) [1, 2006.01]
- without members having orbital motion [1, 2006.01]
- 13/04 • with balls or with rollers acting in a similar manner [1, 2006.01]
- with members having orbital motion [1, 2006.01]
- 13/08 • with balls or with rollers acting in a similar manner [1, 2006.01]
- 13/10 Means for influencing the pressure between the members [1, 2006.01]
- 13/12 • by magnetic forces **[1, 2006.01]**
- 13/14 • for automatically varying the pressure mechanically [1, 2006.01]
- 15/00 Gearings for conveying rotary motion with variable gear ratio, or for reversing rotary motion, by friction between rotary members (control of change-speed or reversing-gearings conveying rotary motion F16H 59/00-F16H 63/00) [1, 2006.01]
- 15/01 characterised by the use of a magnetisable powder or liquid as friction medium between the rotary members [2, 2006.01]
- 15/02 without members having orbital motion [1, 2006.01]
- 15/04 Gearings providing a continuous range of gear ratios [1, 2006.01]

15/06	• • • in which a member A of uniform effective diameter mounted on a shaft may co-operate with different parts of a member B <b>[1, 2006.01]</b>		
15/08	• • • • in which the member B is a disc with a flat or approximately-flat friction surface [1, 2006.01]	19/00	Gearings comprising essentially only toothed gears or friction members and not capable of conveying indefinitely-continuing rotary motion (with intermittently-driving members F16H 27/00-
15/10	• • • • in which the axes of the two members cross or intersect [1, 2006.01]		F16H 31/00; rope or like tackle for lifting or haulage B66D 3/00) [1, 2006.01]
15/12	• • • • • in which one or each member is duplicated, e.g. for obtaining better	19/02	<ul> <li>for interconverting rotary motion and reciprocating motion [1, 2006.01]</li> </ul>
45/44	transmission, for lessening the reaction forces on the bearings [1, 2006.01]	19/04 19/06	<ul><li>comprising a rack [1, 2006.01]</li><li>comprising an endless flexible</li></ul>
15/14	• • • • • in which the axes of the members are parallel or approximately parallel [1, 2006.01]	19/08	member [1, 2006.01]  • for interconverting rotary motion and oscillating
15/16	• • • in which the member B has a conical friction surface [1, 2006.01]		motion [1, 2006.01]
15/18	• • • • externally [1, 2006.01]	Gearing	for conveying or converting motion by means of levers,
15/20	• • • • • co-operating with the outer rim of the member A, which is perpendicular or	<u>links, car</u>	ms or screw-and-nut mechanisms
.=.	nearly perpendicular to the friction surface of the member B <b>[1, 2006.01]</b>	21/00	Gearings comprising primarily only links or levers, with or without slides (F16H 23/00 takes precedence) [1, 2006.01]
15/22	• • • • • the axes of the members being parallel	21/02	<ul> <li>the movements of two or more independently-</li> </ul>
15/24	or approximately parallel [1, 2006.01]  • • • • • internally [1, 2006.01]	21/02	moving members being combined into a single
15/24	• • • • in which the member B has a spherical		movement [1, 2006.01]
15/20	friction surface centered on its axis of revolution [1, 2006.01]	21/04	• Guiding mechanisms, e.g. for straight-line guidance (for drawing-machines B43L) [1, 2006.01]
15/28	• • • • with external friction surface [1, 2006.01]	21/06	which can be made ineffective when
15/30	• • • • with internal friction surface [1, 2006.01]	21 /00	desired [1, 2006.01]
15/32	• • • in which the member B has a curved friction	21/08	<ul> <li>by pushing a reciprocating rod out of its operative position [1, 2006.01]</li> </ul>
	surface formed as a surface of a body of revolution generated by a curve which is neither a circular arc centered on its axis of	21/10	<ul> <li>all movement being in, or parallel to, a single plane [1, 2006.01]</li> </ul>
	revolution nor a straight line [1, 2006.01]	21/12	<ul> <li>for conveying rotary motion [1, 2006.01]</li> </ul>
15/34	• • • • with convex friction surface [1, 2006.01]	21/14	• • • by means of cranks, eccentrics, or like members
15/36	• • • • with concave friction surface, e.g. a hollow toroid surface [1, 2006.01]		fixed to one rotary member and guided along tracks on the other [1, 2006.01]
15/38	• • • • • with two members B having hollow toroid surfaces opposite to each other,	21/16	<ul> <li>for interconverting rotary motion and reciprocating motion [1, 2006.01]</li> </ul>
	the member or members A being adjustably mounted between the	21/18 21/20	<ul><li> • Crank gearings; Eccentric gearings [1, 2006.01]</li><li> • with adjustment of throw (adjustable cranks</li></ul>
15/40	surfaces [1, 2006.01]  • • • in which two members co-operate by means of		or eccentrics F16C 3/28; adjustable connecting-rods F16C 7/06) [1, 2006.01]
45/40	balls, or rollers of uniform effective diameter, not mounted on shafts [1, 2006.01]	21/22	• • • with one connecting-rod and one guided slide to each crank or eccentric [1, 2006.01]
15/42	<ul> <li>in which two members co-operate by means of rings or by means of parts of endless flexible members pressed between the first-mentioned</li> </ul>	21/24	• • • • without further links or guides [1, 2006.01]
	members [1, 2006.01]	21/26 21/28	<ul><li>• • • • with toggle action [1, 2006.01]</li><li>• • • • with cams or additional</li></ul>
15/44	• • • in which two members of non-uniform	21/20	guides [1, 2006.01]
45.440	effective diameter directly co-operate with one another [1, 2006.01]	21/30	• • • • • with members having rolling contact [1, 2006.01]
15/46	<ul> <li>Gearings providing a discontinuous or stepped range of gear ratios [1, 2006.01]</li> </ul>	21/32	• • • • with additional members comprising only pivoted links or arms [1, 2006.01]
15/48	• with members having orbital motion [1, 2006.01]	21/34	<ul> <li>• • with two or more connecting-rods to each</li> </ul>
15/50	• • Gearings providing a continuous range of gear		crank or eccentric [1, 2006.01]
15/52	<ul> <li>ratios [1, 2006.01]</li> <li>in which a member of uniform effective diameter mounted on a shaft may co-operate</li> </ul>	21/36	<ul> <li>• • without swinging connecting-rod, e.g. with epicyclic parallel motion, slot-and- crank motion [1, 2006.01]</li> </ul>
	with different parts of another member [1, 2006.01]	21/38	• • • • with means for temporary energy accumulation, e.g. to overcome dead-centre
15/54	in which two members co-operate by means of rings or by means of parts of endless flexible members pressed between the first mentioned.	21/40	<ul><li>positions [1, 2006.01]</li><li>• for interconverting rotary motion and oscillating</li></ul>
	members pressed between the first-mentioned members [1, 2006.01]	21/42	motion <b>[1, 2006.01]</b> • • with adjustable throw <b>[1, 2006.01]</b>
15/56	<ul> <li>Gearings providing a discontinuous or stepped range of gear ratios [1, 2006.01]</li> </ul>	21/42	with adjustable throw [1, 2000.01]

21/44	<ul> <li>for conveying or interconverting oscillating or reciprocating motions [1, 2006.01]</li> </ul>	27/04	<ul> <li>for converting continuous rotation into a step-by-step rotary movement [1, 2006.01]</li> </ul>
21/46 21/48	<ul><li>with movements in three dimensions [1, 2006.01]</li><li>for conveying rotary motion [1, 2006.01]</li></ul>	27/06	<ul> <li>Mechanisms with driving pins in driven slots, e.g. Geneva drives [1, 2006.01]</li> </ul>
21/40	<ul> <li>for interconverting rotary motion and</li> </ul>	27/08	<ul> <li>with driving toothed gears with interrupted</li> </ul>
21/52 21/54	<ul> <li>reciprocating motion [1, 2006.01]</li> <li>for interconverting rotary motion and oscillating motion [1, 2006.01]</li> <li>for conveying or interconverting oscillating or</li> </ul>	27/10	<ul> <li>toothing [1, 2006.01]</li> <li>obtained by means of disengageable transmission members, combined or not combined with mechanisms according to group F16H 27/06 or</li> </ul>
21/54	reciprocating motions [1, 2006.01]		F16H 27/08 <b>[1, 2006.01]</b>
23/00	Wobble-plate gearings; Oblique-crank gearings [1, 2006.01]	29/00	Gearings for conveying rotary motion with intermittently-driving members, e.g. with freewheel
23/02	• with adjustment of throw by changing the position of the wobble-member (F16H 29/04, F16H 33/10 take precedence) [1, 2006.01]	29/02	<ul> <li>action (freewheels F16D 41/00) [1, 2006.01]</li> <li>between one of the shafts and an oscillating or reciprocating intermediate member, not rotating with</li> </ul>
23/04	• with non-rotary wobble-members [1, 2006.01]		either of the shafts (F16H 29/20, F16H 29/22 take precedence) [1, 2006.01]
23/06	<ul> <li>with sliding members hinged to reciprocating members [1, 2006.01]</li> </ul>	29/04	• in which the transmission ratio is changed by adjustment of a crank, an eccentric, a wobble-
23/08	<ul> <li>connected to reciprocating members by connecting-rods [1, 2006.01]</li> </ul>	20.406	plate, or a cam, on one of the shafts [1, 2006.01]
23/10	<ul> <li>with rotary wobble-plates with plane surfaces [1, 2006.01]</li> </ul>	29/06	<ul> <li>• with concentric shafts, an annular intermediate member moving around and being supported o an adjustable crank or eccentric [1, 2006.01]</li> </ul>
25/00	Gearings comprising primarily only cams, camfollowers and screw-and-nut mechanisms [1, 2006.01]	29/08	• • in which the transmission ratio is changed by adjustment of the path of movement, the location of the pivot, or the effective length, of an
25/02	<ul> <li>the movements of two or more independently- moving members being combined into a single movement [1, 2006.01]</li> </ul>	29/10	<ul> <li>oscillating connecting member [1, 2006.01]</li> <li>in which the transmission ratio is changed by directly acting on the intermittently driving members [1, 2006.01]</li> </ul>
25/04 25/06	<ul><li>for conveying rotary motion [1, 2006.01]</li><li>with intermediate members guided along tracks on</li></ul>	29/12	<ul> <li>between rotary driving and driven members</li> </ul>
25/08	both rotary members [1, 2006.01] • for interconverting rotary motion and reciprocating		(F16H 29/20, F16H 29/22 take precedence) <b>[1, 2006.01]</b>

96 IPC (2016.01), Section F

Attention is drawn to the Notes following the title

of subclass B60W.

of which the bearing parts are relatively axially adjustable **[1, 2006.01]** 

- 2. In groups F16H 59/00-F16H 63/00, clutches positioned within a gearbox are considered as comprising part of the gearings.
- 3. In groups F16H 59/00-F16H 63/00, the following terms or expressions are used with the meaning indicated:
  - "final output element" means the final element which is moved to establish a gear ratio, i.e. which achieves the linking between two power transmission means, e.g. reverse idler gear, gear cluster, coupling sleeve, apply piston of a hydraulic clutch;
  - "mechanism" means a kinematic chain consisting either of a single element or alternatively of a series of elements, the position of each point on the kinematic chain being derivable from the position of any other point on the chain, and therefore, for a given position of a point on one of the elements forming the kinematic chain there is only one position for each of the other points on the element or series of elements forming the kinematic chain:
  - "final output mechanism" means the mechanism which includes the final output element;
  - "actuating mechanism" means the mechanism, the movement of which causes the movement of another mechanism by being in mutual contact;
  - "final actuating mechanism" means the mechanism actuating the final output mechanism.
- Combinations of features individually covered by group F16H 61/00 and one or both of groups F16H 59/00 and F16H 63/00 are classified in group F16H 61/00.
- 5. Combinations of features individually covered by groups F16H 59/00 and F16H 63/00 are classified in group F16H 63/00.
- 6. When classifying in groups F16H 59/00-F16H 63/00, control inputs or types of gearing which are not identified by the classification according to Notes (4) and (5), and which are considered to represent information of interest for search, may also be classified. Such nonobligatory classification should be given as "additional information", e.g. selected from subgroup F16H 61/66 relating to the type of gearing controlled or from group F16H 59/00 relating to control inputs.

### 59/00 Control inputs to change-speed- or reversinggearings for conveying rotary motion [5, 2006.01]

- 59/02 Selector apparatus **[5, 2006.01]**
- 59/04 • Ratio selector apparatus **[5, 2006.01]**
- 59/06 • the ratio being infinitely variable [5, 2006.01]
- 59/08 • Range selector apparatus **[5, 2006.01]**
- 59/10 • comprising levers **[5, 2006.01]**
- 59/12 • comprising push button devices **[5, 2006.01]**
- Inputs being a function of torque or torque demand [5, 2006.01]
- 59/16 • Dynamometric measurement of torque **[5, 2006.01]**
- 59/18 dependent on the position of the accelerator pedal [5, 2006.01]
- 59/20 • Kickdown **[5, 2006.01]**
- 59/22 • Idle position **[5, 2006.01]**
- 59/24 dependent on the throttle opening **[5, 2006.01]**

- 59/26 dependent on pressure **[5, 2006.01]**
- 59/28 • Gasifier pressure in gas turbines **[5, 2006.01]**
- 59/30 • Intake manifold vacuum **[5, 2006.01]**
- 59/32 • Supercharger pressure in internal combustion engines [5, 2006.01]
- 59/34 dependent on fuel feed **[5, 2006.01]**
- Inputs being a function of speed **[5, 2006.01]**
- 59/38 • of gearing elements **[5, 2006.01]**
- 59/40 • Output shaft speed **[5, 2006.01]**
- 59/42 • Input shaft speed **[5, 2006.01]**
- 59/44 dependent on machine speed (F16H 59/46 takes precedence) **[5, 2006.01]**
- 59/46 • dependent on a comparison between speeds [5, 2006.01]
- Inputs being a function of acceleration [5, 2006.01]
- 59/50 Inputs being a function of the status of the machine, e.g. position of doors or safety belts **[5, 2006.01]**
- 59/52 dependent on the weight of the machine, e.g. change in weight resulting from passengers boarding a bus **[5, 2006.01]**
- 59/54 dependent on signals from the brakes, e.g. parking brakes [5, 2006.01]
- 59/56 dependent on signals from the main clutch **[5, 2006.01]**
- 59/58 dependent on signals from the steering **[5, 2006.01]**
- Inputs being a function of ambient conditions [5, 2006.01]
- 59/62 • Atmospheric pressure **[5, 2006.01]**
- 59/64 • Atmospheric temperature **[5, 2006.01]**
- 59/66 • Road conditions, e.g. slope, slippery **[5, 2006.01]**
- 59/68 Inputs being a function of gearing status [5, 2006.01]
- 59/70 dependent on the ratio established **[5, 2006.01]**
- 59/72 dependent on oil characteristics, e.g. temperature, viscosity **[5, 2006.01]**
- 59/74 Inputs being a function of engine parameters (F16H 59/14 takes precedence) **[5, 2006.01]**
- 59/76 • Number of cylinders operating **[5, 2006.01]**
- 59/78 • Temperature **[5, 2006.01]**

## 61/00 Control functions within change-speed- or reversinggearings for conveying rotary motion [5, 2006.01]

- characterised by the signals used **[5, 2006.01]**
- 61/04 Smoothing ratio shift [5, 2006.01]
- 61/06 by controlling rate of change of fluid pressure [5, 2006.01]
- 61/08 • Timing control **[5, 2006.01]**
- **•** Regulating shift hysteresis **[5, 2006.01]**
- 61/12 Detecting malfunction or potential malfunction, e.g. fail safe (in control of hydrostatic gearing F16H 61/4192) **[5, 2006.01, 2010.01]**
- Control of torque converter lock-up clutches **[5, 2006.01]**
- Inhibiting shift during unfavourable conditions (F16H 61/18 takes precedence) **[5, 2006.01]**
- 61/18 Preventing unintentional or unsafe shift (constructional features of the final output mechanisms F16H 63/30) [5, 2006.01]
- 61/20 Preventing gear creeping **[5, 2006.01]**
- **•** Providing engine brake control **[7, 2006.01]**
- Locking (F16H 63/34 takes precedence) **[5, 2006.01]**
- 61/24 Providing feel, e.g. to enable selection **[5, 2006.01]**
- 61/26 Generation or transmission of movements for final actuating mechanisms **[5, 2006.01]**

	Note(s) [5]	61/427 • • • Motor capacity control by mechanical
	The generation or transmission of movements	control means, e.g. by levers or
	comprising only the selector apparatus, is	pedals <b>[2010.01]</b>
	classified in group F16H 59/00.	61/431 • • • • Pump capacity control by electro-hydraulic
	2. The generation or transmission of movements,	control means, e.g. using solenoid valve <b>[2010.01]</b>
	when part of the final output mechanisms, is classified in group F16H 63/00.	61/433 • • • Pump capacity control by fluid pressure
61/28	• • with at least one movement of the final actuating	control means [2010.01]
	mechanism being caused by a non-mechanical force, e.g. power-assisted [5, 2006.01]	61/435 • • • • Pump capacity control by electric actuators [2010.01]
61/30	• • • Hydraulic motors therefor [5, 2006.01]	61/437 • • • Pump capacity control by mechanical
61/32	• • • Electric motors therefor [5, 2006.01]	control means, e.g. by levers or pedals [2010.01]
61/34	<ul> <li>comprising two mechanisms, one for the preselection movement, and one for the shifting</li> </ul>	61/438 • • • Control of forward-reverse switching, e.g.
	movement (F16H 61/36 takes	control of the swash plate causing discharge
	precedence) [5, 2006.01]	in two directions (using a directional control valve F16H 61/4061) [2010.01]
61/36	<ul> <li>with at least one movement being transmitted by a cable [5, 2006.01]</li> </ul>	61/439 • • • Control of the neutral position, e.g. by zero
61/38	• Control of exclusively fluid gearing [5, 2006.01]	tilt rotation holding means (using a neutral
61/40	<ul> <li>hydrostatic (involving modification of the gearing</li> </ul>	valve or a shutoff valve F16H 61/4069) <b>[2010.01]</b>

from a shaft end <b>[2016.01]</b>	• Other sealings for reciprocating rods [1, 2006.01]

## F16K VALVES; TAPS; COCKS; ACTUATING-FLOATS; DEVICES FOR VENTING OR AERATING

## Note(s) [2, 5, 7, 2006.01]

- 1. Attention is drawn to the Notes following the titles of class B81 and subclass B81B relating to "micro-structural devices" and "micro-structural systems".
- 2. Attention is drawn to Note (2) following the title of subclass G05D and also the subdivisions of that subclass, according to which pressure regulators and flow regulators, e.g. flow regulating valves with pressure compensator, even with the whole regulating system contained in a valve, operating with or without auxiliary power, are covered by groups G05D 16/00 or G05D 7/00, respectively. However, details of the valve parts, <u>per se</u>, are classified in the appropriate groups of this subclass.
- 3. Attention is drawn to the following places:

A47J 27/09	Safety devices for pressure cookers
A47J 31/46	Dispensing spouts, drain valves or like beverage-making apparatus
A61B 5/0235	Valves specially adapted for measuring pressure in heart or blood vessels
A61F 2/24	Heart valves
A61M 16/20	Valves specially adapted for medical respiratory devices
A61M 39/00	Tube connectors, tube couplings, valves or branch units specially adapted for medical use in general
A62B 9/02	Valves for respiratory apparatus
A62B 18/10	Valves for breathing masks or helmets

	A62C	Fire extinguishers	
		Nozzles, spray heads or other discharge apparatus for spraying or atomising	
		Arrangements of tyre-inflating valves relative to tyres or wheel rims; Connection of valves to wheel	
		rims, tyres or other inflatable elastic bodies	
	B60G 17/048	Valves specially adapted for adjusting vehicle fluid-spring characteristics	
		Valves specially adapted for vehicle brake control systems	
		Vehicle power-assisted steering characterised by the type of valve used	
		Arrangement of inflating valves for floatable live-saving equipment	
		Container closures with discharging valves	
		Nozzles or valves specially adapted for aerosol containers	
		Safety valves for large containers	
		Gates or closures on large containers	
		Flow control devices for bottling liquids	
		Dispensing, delivering or transferring liquids	
	E02B 8/00	Details, e.g. valves, of barrages or weirs	
		Closures for irrigation conduits	
		Arrangement of valves in hydrants	
		Flushing valves for water-closets or urinals	
		Valve arrangement in door closers	
		Valve arrangements in drilling-fluid circulation systems	
		Valve arrangements in driffing-fidul circulation systems Valve arrangements for boreholes or wells	
		varve arrangements for borenoies or wens Working-fluid valves for controlling machines or engines in general or of positive-displacement type	
		working-ridid varves for controlling machines of engines in general of of positive-displacement type Final actuators for controlling non-positive displacement machines or engines	
		Cyclically operated valves for machines or engines	
		Throttle valves for controlling combustion engines	
		Propellant feed valves for rocket-engines	
	F02M		
		Valves for fuel injection pumps	
	F04		
	F16F 9/34		
		Pipe joints or quick-acting couplings with fluid cut-off means	
		Arrangement of valves in pipes	
		Valves specially adapted to prevent or minimise the effect of water hammer	
		Launching devices for pigs or moles	
		Check valves for lubrication systems	
		Arrangement of valves in pressure vessels	
		Arrangement of safety valves on steam boilers	
		Application of valves to automatic water-feed in boiler	
		Valves for air supply control to burners	
		Valves for lighters with gaseous fuel and adjustable flame	
	F24C 3/12, F24C 5/16	Arrangement of valves on stoves or ranges	
		Air conditioning; Ventilation	
		Disposition of fluid circulation valves in refrigeration machines	
	G05D	Controlling non-electric variables	
	G10B 3/06		
	G10D 9/04	Valves for other wind-actuated musical instruments.

Note(s) [2]

In groups F16K 1/00-F16K 13/00, an initial seal breaking or final sealing movement which is different from the opening or closing movement of the valve is not considered in determining the movement to be classified.

- 1/00 Lift valves, i.e. cut-off apparatus with closure members having at least a component of their opening and closing motion perpendicular to the closing faces (diaphragm valves F16K 7/00) [1, 2006.01]
- with screw-spindle (F16K 1/12-F16K 1/28 take precedence; actuating mechanisms with screw-spindles F16K 31/50) [1, 2006.01]
- 1/04 with a cut-off member rigid with the spindle, e.g. main valves [1, 2006.01]
- 1/06 • Special arrangements for improving the flow, e.g. special shape of passages or casings [1, 2006.01]
- 1/08 • in which the spindle is perpendicular to the general direction of flow [1, 2006.01]
- 1/10 • in which the spindle is inclined to the general direction of flow [1, 2006.01]
- with streamlined valve member around which the fluid flows when the valve is opened [1, 2006.01]
- with ball-shaped valve members (check valves F16K 15/04) [1, 2006.01]
- 1/16 with pivoted closure members **[1, 2006.01]**
- 1/18 • with pivoted discs or flaps [1, 2006.01]
- 1/20 • with axis of rotation arranged externally of valve member [1, 2006.01]
- 1/22 • with axis of rotation crossing the valve member, e.g. butterfly valves [1, 2006.01]
- 1/226 • • Shape or arrangement of the sealing **[1, 2006.01]**
- 1/228 • • Movable sealing bodies **[1, 2006.01]**
- with valve members that, on opening of the valve, are initially lifted from the seat and next are turned around an axis parallel to the seat [1, 2006.01]
- 1/26 • Shape or arrangement of the sealing [1, 2006.01]
- 1/28 • Movable sealing bodies [1, 2006.01]
- specially adapted for pressure containers [1, 2006.01]
- 1/32 Details (details of more general applicability F16K 25/00-F16K 51/00) **[1, 2006.01]**
- 1/34 Cutting-off parts (F16K 1/06, F16K 1/12, F16K 1/14, F16K 1/26 take precedence) [1, 2006.01]
- 1/36 • Valve members (for double-seat valves F16K 1/44) **[1, 2006.01]**
- 1/38 • of conical shape **[1, 2006.01]**
- 1/40 • of helical shape **[1, 2006.01]**
- 1/42 • Valve seats (for double-seat valves F16K 1/44) [1, 2006.01]
- 1/44 • Details of seats or valve members of doubleseat valves [1, 2006.01]
- 1/46 • Attachment of sealing rings **[1, 2006.01]**
- 1/48 • Attaching valve members to valvespindles **[1, 4, 2006.01]**
- 1/50 Preventing rotation of valve members [1, 2006.01]
- 1/52 Means for additional adjustment of the rate of flow [1, 2006.01]
- 1/54 Arrangements for modifying the way in which the rate of flow varies during the actuation of the valve [1, 2006.01]

- 3/00 Gate valves or sliding valves, i.e. cut-off apparatus with closing members having a sliding movement along the seat for opening and closing (F16K 5/00 takes precedence; in barrages or weirs E02B 8/04) [1, 2006.01]
- with flat sealing faces; Packings therefor [1, 2006.01]
- 3/03 with a closure member in the form of an iris-diaphragm [1, 2006.01]
- 3/04 • with pivoted closure members **[1, 2006.01]**
- 3/06 • in the form of closure plates arranged between supply and discharge passages (F16K 3/10 takes precedence) [1, 2006.01]
- 3/08 • with circular closure plates rotatable around their centres [1, 2006.01]
- with special arrangements for separating the sealing faces or for pressing them together [1, 2006.01]
- 3/12 with wedge-shaped arrangements of sealing faces [1, 2006.01]
- with special arrangements for separating the sealing faces or for pressing them together [1, 2006.01]
- with special arrangements for separating the sealing faces or for pressing them together (F16K 3/10, F16K 3/14 take precedence) [1, 2006.01]
- 3/18 • by movement of the closure members **[1, 2006.01]**
- 3/20 • by movement of the seats **[1, 2006.01]**
- with sealing faces shaped as surfaces of solids of revolution (F16K 13/02 takes precedence; with resilient valve members F16K 3/28) [1, 2006.01]
- 3/24 with cylindrical valve members **[1, 2006.01]**
- 3/26 • with fluid passages in the valve member **[1, 2006.01]**
- 3/28 with resilient valve members **[1, 2006.01]**
- 3/30 Details [1, 2006.01]
- 3/312 • Line blinds [1, 2006.01]
- 3/314 Forms or constructions of slides; Attachment of the slide to the spindle [1, 2006.01]
- 3/316 • Guiding of the slide [1, 2006.01]
- 3/32 Means for additional adjustment of the rate of flow [1, 2006.01]
- 3/34 Arrangements for modifying the way in which the rate of flow varies during the actuation of the valve [1, 2006.01]
- 3/36 • Features relating to lubrication [1, 2006.01]
- 5/00 Taps or cocks comprising only cut-off apparatus having at least one of the sealing faces shaped as a more or less complete surface of a solid of revolution, the opening and closing movement being predominantly rotary (taps of the lift-valve type F16K 1/00) [1, 2006.01]
- with plugs having conical surfaces; Packings therefor [1, 2006.01]
- with plugs having cylindrical surfaces; Packings therefor [1, 2006.01]
- with plugs having spherical surfaces; Packings therefor [1, 2006.01]
- 5/08 Details [1, 2006.01]
- 5/10 Means for additional adjustment of the rate of flow [1, 2006.01]
- 5/12 Arrangements for modifying the way in which the rate of flow varies during the actuation of the valve [1, 2006.01]

5/14	• • Special arrangements for separating the sealing faces or for pressing them together [1, 2006.01]	11/16	• • • which only slides, or only turns, or only swings in one plane [1, 2006.01]
5/16	• • • for plugs with conical surfaces [1, 2006.01]	11/18	• • • with separate operating movements for separate

branching pipes, joining pipes to walls	41/00
special for hoses	31/00, 33/00, 35/00
special for pipes: of plastics; of brittle material	47/00, 49/00
PIPING UNITS	
Cleaning features	45/00
Cleaning features	51/00
Heating or cooling	53/00
Accessories	55/00
PROTECTION: AGAINST DAMAGE; CORROSION OR INCRUSTATION; THERMAL INSUL.	

1/00 Laying or reclaiming pipes; Repairing or joining pipes on or under water (soldering or welding B23K; lifting-gear and load-engaging elements B66; hydraulic installations, soil drainage E02B; excavations or underwater constructions E02D; machines for digging trenches in combination with pipe-assembly E02F; laying sewer pipes E03F 3/06; in earth boreholes or wells E21B; tunnelling E21D; laying electric, or combined optical and electric, cables H02G; making special pipe joints, see the relevant groups for the joints) [1, 2, 5, 6, 2006.01]

- Laying or reclaiming pipes on land, e.g. above the ground (F16L 1/12 takes precedence) [5, 2006.01]
- 1/026 • in or on a frozen surface **[6, 2006.01]**
- 1/028 • in the ground (F16L 1/026 takes precedence) **[5, 6, 2006.01]**
- 1/032 • the pipes being continuous (F16L 1/038 takes precedence) **[5, 6, 2006.01]**
- 1/036 • the pipes being composed of sections of short length (F16L 1/038 takes precedence) [5, 6, 2006.01]
- 1/038 • the pipes being made <u>in situ</u> **[6, 2006.01]**
- 1/06 • Accessories therefor, e.g. anchors [5, 2006.01]
- 1/09 • for bringing two tubular members closer to each other **[6, 2006.01]**
- 1/10 • for aligning **[5, 2006.01]**
- 1/11 • for the detection or protection of pipes in the ground **[6, 2006.01]**
- 1/12 Laying or reclaiming pipes on or under water (buoyant hoses F16L 11/133) [5, 2006.01]
- 1/14 • between the surface and the bottom [5, 2006.01]
- 1/15 • vertically **[6, 2006.01]**
- 1/16 • on the bottom **[5, 2006.01]**
- 1/18 • the pipes being S- or J-shaped and under tension during laying **[5, 2006.01]**
- 1/19 • the pipes being J-shaped **[6, 2006.01]**
- 1/20 • Accessories therefor, e.g. floats, weights (buoys B63B 22/00) **[5, 2006.01]**
- 1/225 • Stingers [6, 2006.01]
- 1/23 • Pipe tensioning apparatus **[6, 2006.01]**
- 1/235 • Apparatus for controlling the pipe during laying [6, 2006.01]
- 1/24 • Floats; Weights **[5, 2006.01]**
- 1/26 Repairing or joining pipes on or under water (buoyant hoses F16L 11/133; joints <u>per se</u> F16L 13/00-F16L 49/00) **[5, 2006.01]**

- 3/00 Supports for pipes, cables or protective tubing, e.g. hangers, holders, clamps, cleats, clips, brackets (anchors for holding pipes on or under the ground F16L 1/06; noise absorbers in the form of specially adapted hangers or supports F16L 55/035; arrangements specially adapted for supporting insulated bodies F16L 59/12) [1, 5, 7, 2006.01]
- for supporting or guiding the pipes, cables or protective tubing, between relatively movable points, e.g. movable channels (hauling- or hoisting-chains with arrangements for holding electric cables, hoses or the like F16G 13/16) [5, 2006.01]
- 3/015 using articulated- or supple-guiding elements (arrangements for cranes of means for transmitting pneumatic, hydraulic or electric power to movable parts or devices B66C 13/12) [6, 2006.01]
- partly surrounding the pipes, cables or protective tubing (bands or chains F16L 3/14) [1, 2006.01]
- 3/04 and pressing it against a wall or other support [1, 2006.01]
- 3/06 with supports for wires **[1, 2006.01]**
- 3/08 substantially surrounding the pipe, cable or protective tubing [1, 2006.01]
- 3/10 divided, i.e. with two members engaging the pipe, cable or protective tubing [1, 2006.01]
- 3/11 • and hanging from a pendant (F16L 3/14 takes precedence) **[5, 2006.01]**
- 3/12 comprising a member substantially surrounding the pipe, cable or protective tubing [1, 2006.01]
- 3/123 • and extending along the attachment surface **[5, 2006.01]**
- 3/127 • and extending away from the attachment surface [5, 2006.01]
- 3/13 • and engaging it by snap action **[5, 2006.01]**
- 3/133 • and hanging from a pendant (F16L 3/14 takes precedence) **[5, 2006.01]**
- 3/137 • and consisting of a flexible band **[5, 2006.01]**
- 3/14 Hangers in the form of bands or chains **[1, 2006.01]**
- with special provision allowing movement of the pipe (F16L 3/01 takes precedence; supporting pipes or cables inside other pipes or sleeves F16L 7/00) [1, 5, 2006.01]
- 3/18 • allowing movement in axial direction [1, 2006.01]
- 3/20 allowing movement in transverse direction [1, 2006.01]
- 3/202 • the transverse movement being converted to a rotational movement (F16L 3/215 takes precedence) [6, 2006.01]
- 3/205 • having supporting springs **[5, 2006.01]**

			or minimising the effect of explosion (flame traps A62C 4/00) <b>[1, 2006.01]</b>

**F17D PIPE-LINE SYSTEMS; PIPE-LINES** (distributing water E03B; pumps or compressors F04; fluid dynamics F15D; valves or the like F16K; pipes, laying pipes, supports, joints, branches, repairing, work on the entire line, accessories F16L; steam traps or the like F16T; fluid-pressure electric cables H01B 9/06)

#### Note(s)

In this subclass, the following expression is used with the meaning indicated:

• "pipe-line systems" means systems described in flow sheets as well as arrangements of co-operating elements, the elements <u>per se</u> being covered by the relevant subclasses.

1/00	<b>Pipe-line systems</b> (conveying articles or materials through a pipe-line by means of a fluid carrier B65G 51/00, B65G 53/00; dispensing, delivering or transferring liquids B67D; apparatus or devices for transferring liquids from bulk storage containers or reservoirs into vehicles or into portable containers, e.g. for retail sale purposes, B67D 7/00; conveying material which has been excavated by a dredger or soil shifter through a pipe-line E02F 7/10; sewer pipe-line systems E03F 3/00; thermal insulation of pipe-lines F16L 59/00; central heating systems F24D) [1, 2, 2006.01]  • for gases or vapours [1, 2006.01]	<ul> <li>1/065 • Arrangements for producing propulsion of gases or vapours [2, 2006.01]</li> <li>1/07 • by compression [2, 2006.01]</li> <li>1/075 • by mere expansion from an initial pressure level, e.g. by arrangement of a flow-control valve [2, 2006.01]</li> <li>1/08 • for liquids or viscous products (water-main or service pipe systems E03B 7/04; domestic hot-water supply systems F24D 17/00) [1, 2, 2006.01]</li> <li>1/12 • Conveying liquids or viscous products by pressure of another fluid [1, 2, 2006.01]</li> </ul>
1/04	• for distribution of gas [1, 2006.01]	1/13 • • Conveying liquids or viscous products by gravity [2, 2006.01]
1/05 1/06	<ul> <li>• Preventing freezing (by heating F16L 53/00) [1, 2006.01]</li> <li>• for steam [1, 2006.01]</li> </ul>	1/14 • • Conveying liquids or viscous products by pumping [1, 2, 2006.01]
1,00	101 Steam [1, 2000.01]	

- Facilitating the conveyance of liquids or effecting the conveyance of viscous products by modification of their viscosity [1, 2, 2006.01]
- 1/17 • by mixing with another liquid **[2, 2006.01]**
- 1/18 • by heating **[1, 2, 2006.01]**
- Arrangements or systems of devices for influencing or altering dynamic characteristics of the systems, e.g. for damping pulsations caused by opening or closing of valves (fluid dynamics F15D; damping pulsations in fluids in pipes in general F16L 55/04) [2, 2006.01]

### 3/00 Arrangements for supervising or controlling working operations [1, 2006.01]

- for controlling, signalling, or supervising the conveyance of a product [2, 2006.01]
- for controlling, signalling, or supervising the conveyance of several different products following one another in the same conduit, e.g. for switching from one receiving tank to another [2, 2006.01]
- 3/05 the different products not being separated (separation of contaminants by distillation B01D 3/00) [2, 2006.01]
- the different products being separated by "godevils", e.g. spheres (cleaning devices moved along the inside of pipe-lines by a fluid B08B 9/053) [2, 2006.01]

- for taking out the product in the line (investigating or analysing materials by determinating their chemical or physical properties G01N) [2, 2006.01]
- for injecting a composition into the line [2, 2006.01]
- for eliminating water (separation of liquids B01D, e.g. B01D 17/00; separation of gases or vapours B01D 53/00) [2, 2006.01]
- for eliminating particles in suspension (from liquids by sedimentation B01D 21/00; separation by filtration or otherwise B01D 24/00-B01D 51/00; centrifugal apparatus B04) [2, 2006.01]
- for measuring the quantity of conveyed product (measuring volume or volume flow, in general G01F) [2, 2006.01]

#### 5/00 Protection or supervision of installations

(arrangements for protecting foundations E02D 31/00; protecting pipes from damage or internal or external wear F16L 57/00, against corrosion or scale F16L 58/00; investigation of the fluid-tightness of structures G01M 3/00) [2, 2006.01]

- Preventing, monitoring, or locating loss [2, 2006.01]
- 5/04 by means of a signalling fluid enclosed in a double wall [2, 2006.01]
- 5/06 using electric or acoustic means [2, 2006.01]
- Protection of installations or persons from the effects of high voltage induced in the pipe-line (emergency protective circuit arrangements H02H) [2, 2006.01]

#### LIGHTING; HEATING

#### F21 LIGHTING

#### Note(s)

Attention is drawn to Note III of Section H, and in particular that subclass H05B covers electrical aspects of the same technical subjects that are covered by class F21.

F21H INCANDESCENT MANTLES; OTHER INCANDESCENT BODIES HEATED BY COMBUSTION (arrangements thereof F21V 36/00; burners F23D)

1/00	Incandescent mantles; Selection of imbibition liquids
	therefor [1, 2006,01]

- characterised by the material thereof [1, 2006.01]
- 3/00 Manufacturing incandescent mantles; Treatment prior to use, e.g. burning-off; Machines for manufacturing [1, 2006.01]
- 5/00 Solid incandescent bodies (incandescent mantles F21H 1/00) [1, 2006.01]
- 7/00 Other incandescent bodies [2009.01]

#### F21K LIGHT SOURCES NOT OTHERWISE PROVIDED FOR

#### Note(s) [2016.01]

In this subclass, it is desirable to add the indexing codes of subclasses F21W and F21Y.

- 2/00 Light sources using luminescence (luminescent materials C09K 11/00; selection of luminescent materials for light screens F21V 9/16; using excitation by radioactivity G21H 3/02, H01J 65/06, H01J 65/08; transforming the wavelength of the light of gas- or vapour-discharge lamps by luminescence H01J 61/42; electroluminescent light sources H05B 33/00) [1, 2, 7, 2006.01]
- using triboluminescence; using thermoluminescence [1, 2006.01]
- 2/06 using chemiluminescence **[3, 2006.01]**
- 2/08 activated by an electric field, i.e. electrochemiluminescence [3, 2006.01]
- 5/00 Light sources using charges of combustible material, e.g. illuminating flash devices (explosive or thermic compositions C06B; fireworks F42B 4/00; photographic flash units G03B 15/03) [1, 3, 5, 2006.01]
- Plural charges, e.g. associated for sequential ignition (F21K 5/06, F21K 5/12 take precedence) [5, 2006.01]
- 5/06 Charge containment [5, 2006.01]
- 5/08 • Charge held in non-disrupting container, e.g. photo-flash bulb [5, 2006.01]
- 5/10 • bearing a coating **[5, 2006.01]**
- 5/12 Charge ignition **[5, 2006.01]**
- 5/14 • percussive **[5, 2006.01]**
- 5/16 electrical (circuit arrangements H05B 43/02) **[5, 2006.01]**
- 5/18 • Electrically-ignited primers **[5, 2006.01]**
- 5/20 Charge feeding means **[5, 2006.01]**
- 5/22 Protective light shields **[5, 2006.01]**

9/00 Light sources using semiconductor devices as lightgenerating elements, e.g. using light-emitting diodes [LED] or lasers [2016.01]

#### Note(s) [2016.01]

- 1. In this group, the following expressions are used with the meaning indicated:
  - "light source" means a light-generating component intended for installation in a fitting or holder incorporated in a lighting device;
  - "retrofit light source" means a light source comprising substantially the same attachment means as those of incandescent lamps or fluorescent lamps. "Retrofit light sources" are specially adapted for replacing or substituting such lamps.
- Semiconductor devices <u>per se</u>, or assemblies thereof, specially adapted for light emission, e.g. for use in light sources (in the sense of Note (1)) are covered by subclass H01L, e.g. H01L 33/00 or H01L 51/50, or by subclass H01S.
- Lighting devices or systems in which light sources are used are covered by subclasses F21L or F21S.
- 4. When classifying in this group, classification is also made in subclass F21V if detail aspects covered by that subclass are of interest.
- 9/20 Light sources comprising attachment means [2016.01]

9/23

 Retrofit light sources for lighting devices with a single fitting for each light source, e.g. for substitution of incandescent lamps with bayonet or threaded fittings [2016.01]

F21L LIGHTING DEVICES OR SYSTEMS THEREOF, BEING PORTABLE OR SPECIALLY ADAPTED FOR TRANSPORTATION (burners F23D; electric aspects or elements, see section H, e.g. electric light sources H01J, H01K, H05B) [1, 7]

#### Note(s) [7, 2009.01]

- 1. This subclass <u>covers</u> devices or systems designed or specially adapted to be carried, e.g. by hand, or otherwise transported from place to place, e.g. on wheeled supports, in order to provide illumination as and where required.
- 2. This subclass <u>does not cover</u> devices or systems intended for fixed installation, e.g. vehicle lighting, or for use essentially at a permanent location, which are covered by subclass F21S.
- 3. Non-electric lighting devices are classified in groups F21L 17/00-F21L 26/00 only if a special adaptation related to the use of a non-electric light source is of interest.
- 4. In this subclass, it is desirable to add the indexing codes of subclasses F21W and F21Y.

#### **Subclass index**

131/308 • • for aquaria [7, 2006.01]	131/411 • for inspection of the interior of hollow structures,
	e.g. vessels, tubes [7, 2006.01]

# F21Y INDEXING SCHEME ASSOCIATED WITH SUBCLASSES F21K, F21L, F21S and F21V, RELATING TO THE FORM OR THE KIND OF THE LIGHT SOURCES OR OF THE COLOUR OF THE LIGHT EMITTED [7]

#### Note(s) [7]

This subclass constitutes an indexing scheme associated with subclasses F21K, F21L, F21S and F21V, relating to the form or the kind of the light sources, or of the colour of the light emitted.

101/00	Point-like light sources [7, 2006.01, 2016.01]	107/40	• on the sides of polyhedrons, e.g. cubes or pyramids [2016.01]
103/00	Elongate light sources, e.g. fluorescent tubes [7, 2006.01, 2016.01]	107/50	• on planar substrates or supports, but arranged in different planes or with differing orientation, e.g. on
103/10	<ul> <li>comprising a linear array of point-like light- generating elements [2016.01]</li> </ul>		plate-shaped supports with steps on which light- generating elements are mounted [2016.01]
103/20	<ul> <li>of polygonal shape, e.g. square or rectangular [2016.01]</li> </ul>	107/60	• on stacked substrates [2016.01]
103/30	• curved [2016.01]	107/70	<ul> <li>on flexible or deformable supports or substrates, e.g. for changing the light source into a desired</li> </ul>
103/33	• • annular [2016.01]		form <b>[2016.01]</b>
103/37	• • U-shaped [2016.01]	107/80	<ul> <li>on articulated supports or substrates [2016.01]</li> </ul>
105/00	Planar light sources [7, 2006.01, 2016.01]	107/90	<ul> <li>on two opposite sides of supports or substrates [2016.01]</li> </ul>
105/10	<ul> <li>comprising a two-dimensional array of point-like light-generating elements [2016.01]</li> </ul>	109/00	Light sources with light-generating elements disposed
105/12	characterised by the geometrical disposition of the light-generating elements, e.g. arranging light- generating elements in differing patterns or		on transparent or translucent supports or substrates [2016.01]
105/14	densities [2016.01]  • characterised by the overall shape of the two-	111/00	Light sources of a form not covered by groups F21Y 101/00-F21Y 107/00 [7, 2006.01, 2016.01]
105/14	dimensional array [2016.01]	113/00	Combination of light sources [7, 2006.01, 2016.01]
105/16	<ul> <li>• square or rectangular, e.g. for light panels [2016.01]</li> </ul>	113/10	• of different colours [2016.01]
105/18	• • annular; polygonal other than square or rectangular, e.g. for spotlights or for generating	113/13	<ul> <li>comprising an assembly of point-like light sources [2016.01]</li> </ul>
	an axially symmetrical light beam [2016.01]	113/17	<ul> <li>• • forming a single encapsulated light source [2016.01]</li> </ul>
107/00	Light sources with three-dimensionally disposed light- generating elements [2016.01]	113/20	• of different form [2016.01]
107/10	<ul> <li>on concave supports or substrates, e.g. on the inner side of bowl-shaped supports [2016.01]</li> </ul>	115/00	Light-generating elements of semiconductor light sources [2016.01]
107/20	• on convex supports or substrates, e.g. on the outer	115/10	<ul> <li>Light-emitting diodes [LED] [2016.01]</li> </ul>
107720	surface of spheres [2016.01]	115/15	<ul> <li>Organic light-emitting diodes [OLED] [2016.01]</li> </ul>
107/30	• on the outer surface of cylindrical surfaces, e.g. rod-	115/20	<ul> <li>Electroluminescent [EL] light sources [2016.01]</li> </ul>
	shaped supports having a circular or a polygonal cross section [2016.01]	115/30	Semiconductor lasers [2016.01]

#### F22 STEAM GENERATION

#### Note(s)

In this class, the following term is used with the meaning indicated:

"steam" covers also other condensable vapours, e.g. mercury, diphenyl, diphenyl oxide.

**F22B METHODS OF STEAM GENERATION; STEAM BOILERS** (steam engine plants where engine aspects predominate F01K; removal of combustion products or residues, e.g. cleaning of the combustion contaminated surfaces of tubes of boilers, F23J 3/00; domestic central-heating systems using steam F24D; heat exchange or heat transfer in general F28; generation of vapour in the cores of nuclear reactors G21)

#### Note(s)

This subclass <u>covers</u> only methods of, or apparatus for, the generation of steam under pressure for heating or power purposes.

0			•	•	
<b>\11</b>	hri	lass	ın	an.	7

METHODS FOR STEAM GENERATIONSTEAM BOILERS General characteristics	1/00, 3/00
having drum; having furnace tube; having fire tube; having combined fire tube and water tube; having fire-box	5/00, 7/00, 9/00, 11/00, 13/00
having water tubes	
auxiliary tubes	11/00
horizontal; horizontally-inclined; combined horizontally-inclined and vertical; vertical or steeply-inclined	15/00, 17/00, 19/00, 21/00
formed of sets of spaced double-walled water tubes or of return tubes; water tubes with	
internally-arranged flue tubes	23/00, 25/00
Special characteristics	27/00, 29/00
Modifications or arrangements; details of general application	31/00, 37/00
PLANTS; CONTROL SYSTEMS	33/00, 35/00

1/00	Methods of steam generation characterised by form		
	of heating method (use of solar heat F24J 2/00; jackets		
	or other cooling means in which steam is generated and		
	which serve for cooling other apparatus, see the		
	subclasses for such apparatus) [1, 2006.01]		

- 1/02 by exploitation of the heat content of hot heat carriers [1, 2006.01]
- 1/04 the heat carrier being hot slag, hot residues, or heated blocks, e.g. iron blocks [1, 2006.01]
- 1/06 the heat carrier being molten; Use of molten metal, e.g. zinc, as heat transfer medium [1, 2006.01]
- 1/08 • the heat carrier being steam **[1, 2006.01]**
- 1/10 • released from heat accumulators [1, 2006.01]
- 1/12 • produced by an indirect cyclic process [1, 2006.01]
- 1/14 • coming in direct contact with water in bulk or in sprays [1, 2006.01]
- 1/16 • the heat carrier being hot liquid or hot vapour, e.g. waste liquid, waste vapour [1, 2006.01]
- the heat carrier being a hot gas, e.g. waste gas such as exhaust gas of internal-combustion engines (use of waste heat of combustion engines, in general, F02) [1, 2006.01]
- using heat evolved in a solution absorbing steam;Soda steam boilers [1, 2006.01]
- using combustion under pressure substantially exceeding atmospheric pressure [1, 2006.01]
- 1/24 Pressure-fired steam boilers, e.g. using turbo air compressors actuated by hot gases from boiler furnace [1, 2006.01]
- Steam boilers of submerged-flame type, i.e. the flame being surrounded by, or impinging on, the water to be vaporised [1, 2006.01]
- 1/28 in boilers heated electrically [1, 2006.01]
- 1/30 • Electrode boilers [1, 2006.01]

- 3/00 Other methods of steam generation; Steam boilers not provided for in other groups of this subclass [1, 2006.01]
- involving the use of working media other than water [1, 2006.01]
- by drop in pressure of high-pressure hot water within pressure-reducing chambers, e.g. in accumulators (steam accumulators per se F01K 1/00) [1, 2006.01]
- by transformation of mechanical, e.g. kinetic, energy into heat energy [1, 2006.01]
- at critical or supercritical pressure values [1, 2006.01]
- 5/00 Steam boilers of drum type, i.e. without internal furnace or fire tubes, the boiler body being contacted externally by flue gas [1, 2006.01]
- 5/02 with auxiliary water tubes outside the boiler body [1, 2006.01]
- Component parts thereof; Accessories therefor (covers or similar closure members for pressure vessels in general F16J 13/00) [1, 2006.01]
- 7/00 Steam boilers of furnace-tube type, i.e. the combustion of fuel being performed inside one or more furnace tubes built-in in the boiler body [1, 2006.01]
- 7/02 without auxiliary water tubes **[1, 2006.01]**
- 7/04 with auxiliary water tubes **[1, 2006.01]**
- 7/06 inside the furnace tube in transverse arrangement [1, 2006.01]
- 7/08 • inside the furnace tube in longitudinal arrangement [1, 2006.01]
- 7/10 • outside the boiler body **[1, 2006.01]**
- with auxiliary fire tubes; Arrangement of header boxes providing for return diversion of flue gas flow [1, 2006.01]

#### F23 COMBUSTION APPARATUS; COMBUSTION PROCESSES

#### Note(s)

In this class, the following terms or expressions are used with the meanings indicated:

- "combustion" means a heat-producing sequence of chemical reactions between a burnable substance and molecular oxygen, e.g. in air, in most cases generating light in the form of flames or a glow;
- "combustion chamber" means a chamber in which fuel is burned to establish a self-supporting fire or flame and which surrounds that fire or flame;
- "burner" means a device by which fluid fuel, or solid fuel suspended in air, is passed to a combustion space where it burns to produce a self-supporting flame;
- "air" means a mixture of gases containing free oxygen and able to promote or support combustion.

**METHODS OR APPARATUS FOR COMBUSTION USING ONLY SOLID FUEL** (for combustion of fuels that are solid at room temperatures, but burned in melted form, e.g. candle wax, C11C 5/00, F23C, F23D; using solid fuel suspended in air F23C, F23D 1/00; using solid fuel suspended in liquids F23C, F23D 11/00; using solid fuel together with fluid fuel or with solid fuel suspended in air, simultaneously or alternately, F23C, F23D 17/00)

#### Note(s) [2006.01]

- This subclass only <u>covers</u> combustion wherein the main body of fuel is either essentially stationary during combustion or mechanically transported, as opposed to pneumatically transported or suspended in air, during combustion.
- 2. In this subclass, the first place priority rule is applied, i.e. at each hierarchical level, in the absence of an indication to the contrary, classification is made in the first appropriate place.
- 3. In this subclass, methods are classified in the groups that cover the apparatus used. Methods that are not related to a particular type of apparatus are classified in group F23B 90/00.
- 4. In this subclass, it is desirable to add the indexing codes of groups F23B 101/00-F23B 103/00.

#### **Subclass index**

#### COMBUSTION APPARATUS

COMB COTTON THE HEAD CO	
Combinations of two or more combustion chambers	10/00
Specially adapted for portability or transportability	20/00
Functional types	30/00-60/00
Returning solid combustion residues to the combustion chamber	70/00
Creating a distinct flow path for flue gases or for non-combusted gases given off by the fuel	80/00
COMBUSTION METHODS NOT RELATED TO A PARTICULAR TYPE OF APPARATUS	90/00

10/00	Combustion apparatus characterised by the combination of two or more combustion	50/08	• • with fuel-deflecting bodies forming free combustion spaces inside the fuel layer [2006.01]
10/02	<ul> <li>chambers [2006.01, 2011.01]</li> <li>including separate secondary combustion chambers [2011.01]</li> </ul>	50/10	<ul> <li>with the combustion zone at the bottom of fuel- filled conduits ending at the surface of a fuel bed [2006.01]</li> </ul>
20/00	Combustion apparatus specially adapted for portability or transportability [2006.01]	50/12	<ul> <li>the fuel being fed to the combustion zone by free fall or by sliding along inclined surfaces, e.g. from a conveyor terminating above the fuel bed [2006.01]</li> </ul>
30/00	Combustion apparatus with driven means for agitating the burning fuel; Combustion apparatus	60/00	Combustion apparatus in which the fuel burns essentially without moving [2006.01]
20/02	with driven means for advancing the burning fuel through the combustion chamber [2006.01]	60/02	<ul> <li>with combustion air supplied through a grate [2006.01]</li> </ul>
30/02	<ul> <li>with movable, e.g. vibratable, fuel-supporting surfaces; with fuel-supporting surfaces that have movable parts [2006.01]</li> </ul>	70/00	Combustion apparatus characterised by means for returning solid combustion residues to the
30/04	with fuel-supporting surfaces that are rotatable around a horizontal or inclined axis and support		combustion chamber [2006.01]
	the fuel on their inside, e.g. cylindrical grates [2006.01]	80/00	Combustion apparatus characterised by means creating a distinct flow path for flue gases or for non-
30/06	<ul> <li>with fuel-supporting surfaces that are specially adapted for advancing the fuel through the combustion zone [2006.01]</li> </ul>	80/02	<ul> <li>combusted gases given off by the fuel [2006.01]</li> <li>by means for returning flue gases to the combustion chamber or to the combustion zone [2006.01]</li> </ul>
30/08	• • • with fuel-supporting surfaces that move through the combustion zone, e.g. with chain grates [2006.01]	80/04	<ul> <li>by means for guiding the flow of flue gases, e.g. baffles [2006.01]</li> </ul>
30/10	• • with fuel-supporting surfaces having fuel advancing elements that are movable, but	90/00	Combustion methods not related to a particular type of apparatus [2006.01, 2011.01]
	remain essentially in the same place, e.g. with	90/02	<ul> <li>Start-up techniques [2011.01]</li> </ul>
	rollers or reciprocating grate bars [2006.01]	90/04	• including secondary combustion (in separate combustion chambers F23B 10/02) [2011.01]
40/00	Combustion apparatus with driven means for feeding fuel into the combustion chamber [2006.01]	90/06	• • the primary combustion being a gasification or pyrolysis in a reductive atmosphere [2011.01]
40/02	<ul> <li>the fuel being fed by scattering over the fuel- supporting surface [2006.01]</li> </ul>	90/08	• • in the presence of catalytic material [2011.01]
40/04	<ul> <li>the fuel being fed from below through an opening in the fuel-supporting surface [2006.01]</li> </ul>	99/00	Subject matter not provided for in other groups of this subclass [2006.01]
40/06	<ul> <li>the fuel being fed along the fuel-supporting surface [2006.01]</li> </ul>	Indovina	scheme veleted to adoptation of combustion apparents
40/08	• • into pot- or trough-shaped grates [2006.01]		scheme related to adaptation of combustion apparatus [2006.01]
50/00	Combustion apparatus in which the fuel is fed into or through the combustion zone by gravity, e.g. from a fuel storage situated above the combustion zone [2006.01]	101/00	Adaptation of combustion apparatus to boilers in which the combustion chamber is situated inside the boiler vessel, e.g. surrounded by cooled surfaces [2006.01]
50/02	<ul> <li>the fuel forming a column, stack or thick layer with the combustion zone at its bottom [2006.01]</li> </ul>	103/00	Adaptation of combustion apparatus for placement
50/04	the movement of combustion air and flue gases being substantially transverse to the movement of the first 12006 011.		in or against an opening of a boiler, e.g. for replacing an oil burner [2006.01]
50/06	<ul> <li>the fuel [2006.01]</li> <li>the flue gases being removed downwards through one or more openings in the fuel-supporting surface [2006.01]</li> </ul>	103/02	<ul> <li>for producing an essentially horizontal flame [2006.01]</li> </ul>

# F23C METHODS OR APPARATUS FOR COMBUSTION USING FLUID FUEL OR SOLID FUEL SUSPENDED IN AIR (burners F23D)

### Note(s) [2006.01]

In this subclass, methods are classified in the groups that cover the apparatus used.

**F23J REMOVAL OR TREATMENT OF COMBUSTION PRODUCTS OR COMBUSTION RESIDUES; FLUES** (precipitating dust from flue gases B01D; composition of fuels C10; combustion apparatus for consuming smoke or fumes, e.g. exhaust gases, F23G 7/06)

#### Note(s)

- This subclass <u>covers</u> also the cleaning of surfaces of furnace tubes, flame tubes, water tubes, flues or the like of boilers, heat-exchange or heat-transfer conduits, which surfaces are contaminated by combustion products or combustion residues.
- 2. This subclass <u>does not cover</u> the cleaning of surfaces of boilers, heat exchange or heat-transfer conduits contaminated by other than combustion products or combustion residues, which is covered by subclass F28G.

#### F24 HEATING; RANGES; VENTILATING

**Stoves or ranges [1, 2006.01]** 

insulation [1, 2006.01]

#### Note(s)

1/00

In this class, the following terms are used with the meanings indicated:

- "stove" includes apparatus which may have an open fire, e.g. fireplace;
- "range" means an apparatus for cooking having elements that perform different cooking operations or cooking and heating operations.

F24C OTHER DOMESTIC STOVES OR RANGES; DETAILS OF DOMESTIC STOVES OR RANGES, OF GENERAL APPLICATION (radiator stoves of the fluid-circulating type F24H)

#### **Subclass index**

STOVES OR RANGES, NOT RESTRICTED TO SOLID FUEL	
General characteristics	1/00
With single kind of fuel or energy supply	3/00-9/00
With more than one, or unspecified kind of fuel or energy supply	1/00
With additional means for heating water	
With self-cleaning provisions	14/00
Combinations of stoves or ranges	
DETAILS OF STOVES OR RANGES IN GENERAL	15/00

- 1/00 Stoves or ranges in which the fuel or energy supply is not restricted to solid fuel or to a type covered by a single one of groups F24C 3/00-F24C 9/00; Stoves or ranges in which the type of fuel or energy supply is not specified [1, 2006.01]
- adapted for the use of two or more kinds of fuel or energy supply (F24C 1/16 takes precedence; combinations of two or more stoves or ranges each having a different kind of fuel or energy supply F24C 11/00) [1, 2006.01]
- 1/04 • simultaneously **[1, 2006.01]**
- 1/06 by replacing parts, e.g. replacing burner by electric heater [1, 2006.01]
- solely adapted for radiation heating (F24C 1/16 takes precedence) [1, 2006.01]
- 1/10 • with reflectors **[1, 2006.01]**
- 1/12 • of circular shape **[1, 2006.01]**
- 1/14 Radiation heating stoves or ranges, with additional provision for convection heating (F24C 1/02, F24C 1/16 take precedence; solely adapted for convection heating F24H) [1, 2006.01]
- with special adaptation for travelling, e.g. collapsible [1, 2006.01]
- 3/00 Stoves or ranges for gaseous fuels [1, 2006.01]
- with heat produced solely by flame (F24C 3/14 takes precedence) [1, 2006.01]
- with heat produced wholly or partly by a radiant body, e.g. by a perforated plate (F24C 3/14 takes precedence) [1, 2006.01]
- 3/06 • without any visible flame [1, 2006.01]
- Arrangement or mounting of burners (burners per se F23D) [1, 2006.01]
- Arrangement or mounting of ignition devices (ignition devices per se F23Q) [1, 2006.01]
- Arrangement or mounting of control or safety devices (control valves F16K; safety devices for burners F23D 14/72; regulating or controlling combustion F23N) [1, 2006.01]
- with special adaptation for travelling, e.g. collapsible [1, 2006.01]
- 5/00 Stoves or ranges for liquid fuels [1, 2006.01]
- with evaporation burners, e.g. dish type (F24C 5/20 takes precedence) [1, 2006.01]

- 5/04 • wick type **[1, 2006.01]**
- 5/06 • adjustable **[1, 2006.01]**
- 5/08 • with heat produced wholly or partly by a radiant body [1, 2006.01]
- 5/10 with atomising burners (F24C 5/20 takes precedence) [1, 2006.01]
- Arrangement or mounting of burners (burners per se F23D) [1, 2006.01]
- Arrangement or mounting of ignition devices (ignition devices per se F23Q) [1, 2006.01]
- Arrangement or mounting of control or safety devices (control valves F16K; safety devices for burners F23D; regulating or controlling combustion F23N) [1, 2006.01]
- Liquid-fuel supply arrangements forming parts of stoves or ranges (feeding liquid fuel to combustion apparatus in general F23K) [1, 2006.01]
- with special adaptation for travelling, e.g. collapsible [1, 2006.01]
- 7/00 Stoves or ranges heated by electric energy (electric heating elements or arrangements H05B) [1, 2006.01]
- 7/02 using microwaves (heating using microwaves in general H05B 6/64) [1, 2006.01]
- 7/04 with heat radiated directly from the heating element (F24C 7/10 takes precedence) [1, 2006.01]
- 7/06 Arrangement or mounting of electric heating elements [1, 2006.01]
- 7/08 Arrangement or mounting of control or safety devices (switches H01H; circuit arrangements for electric heating H05B) [1, 2006.01]
- 7/10 with special adaptation for travelling, e.g. collapsible [1, 2006.01]
- 9/00 Stoves or ranges heated by a single type of energy supply not covered by groups F24C 3/00-F24C 7/00 or subclass F24B (using the heat from an exothermal reaction not involving a supply of free oxygen gas, using solar energy F24J) [1, 2006.01]
- 11/00 Combinations of two or more stoves or ranges, e.g. each having a different kind of energy supply [1, 2006.01]

13/00	Stoves or ranges with additional provisions for heating water [1, 3, 2006.01]	15/16	<ul> <li>Shelves, racks, or trays inside ovens; Supports therefor [1, 2006.01]</li> </ul>
<b>14/00</b> 14/02	Stoves or ranges having self-cleaning provisions, e.g. continuous or catalytic cleaning, electrostatic cleaning [3, 2006.01]  • pyrolytic type [3, 2006.01]	15/18	<ul> <li>Arrangement of compartments additional to cooking compartments, e.g. for warming, for storing utensils or fuel containers; Arrangement of additional heating or cooking apparatus, e.g. grills (grills per se A47J) [1, 2006.01]</li> </ul>

**DOMESTIC- OR SPACE-HEATING SYSTEMS, e.g. CENTRAL HEATING SYSTEMS; DOMESTIC HOT-WATER SUPPLY SYSTEMS; ELEMENTS OR COMPONENTS THEREFOR** (preventing corrosion C23F; water supply in general E03; using steam or condensate extracted or exhausted from steam engine plants for heating purposes F01K 17/02; steam traps F16T; domestic stoves or ranges F24B, F24C; water or air heaters having heat generating means F24H; combined heating and refrigeration systems F25B; heat exchange apparatus or elements F28; removing furring F28G; electric heating elements or arrangements H05B)

#### Note(s) [5]

In this subclass, the following expression is used with the meaning indicated:

• "central heating system" means a system in which heat is generated or stored at central sources and is distributed by means of a transfer fluid to the spaces or areas to be heated.

#### **Subclass index**

# CENTRAL HEATING SYSTEMS With heat-transfer fluid: steam; hot water; hot air or exhaust gas; other fluid. 1/00, 3/00, 5/00, 7/00 Combinations. 9/00 District heating systems. 10/00 By heat storage. 11/00 Other systems. 12/00 OTHER DOMESTIC- OR SPACE-HEATING SYSTEMS Electric; Other. 13/00, 15/00 DOMESTIC HOT-WATER SUPPLY. 17/00 DETAILS. 19/00

#### **Central heating systems**

- **1/00** Steam central heating systems (F24D 10/00, F24D 11/00 take precedence) [**1, 2006.01**]
- 1/02 operating with live steam **[1, 2006.01]**
- 1/04 operating with exhaust steam **[1, 2006.01]**
- 1/06 operating with superheated steam [1, 2006.01]
- 1/08 Feed-line arrangements, e.g. providing for one-pipe system [1, 2006.01]
- **3/00 Hot-water central heating systems** (F24D 10/00, F24D 11/00 take precedence) **[1, 2006.01]**
- 3/02 with forced circulation, e.g. by pumps **[1, 2006.01]**

- 3/04 with the water under high pressure **[1, 2006.01]**
- 3/06 Arrangements or devices for maintaining high pressure [1, 2006.01]
- in combination with systems for domestic hot-water supply [1, 2006.01]
- Feed-line arrangements, e.g. providing for heataccumulator tanks, expansion tanks [1, 2006.01]

- Tube and panel arrangements for ceiling, wall, or underfloor heating (electric underfloor heating F24D 13/02; special adaptations of floors for incorporating ducts, e.g. for heating or ventilating, E04B 5/48; building elements of block or other shape for the construction of parts of buildings characterised by special adaptations, e.g. serving for locating conduits, E04C 1/39; building elements of relatively thin form for the construction of parts of buildings with special adaptations for auxiliary purposes, e.g. serving for locating conduits, E04C 2/52) [4, 2006.01]
- 3/14 incorporated in a ceiling, wall or floor [4, 2006.01]
- 3/16 mounted on, or adjacent to, a ceiling, wall or floor [4, 2006.01]
- 3/18 using heat pumps **[5, 2006.01]**
- 5/00 Hot-air central heating systems (F24D 10/00, F24D 11/00 take precedence; air conditioning F24F); Exhaust-gas central heating systems [1, 2006.01]
- operating with discharge of hot air into the space or area to be heated [1, 2006.01]
- 5/04 • with return of the air to the air heater **[1, 2006.01]**
- operating without discharge of hot air into the space or area to be heated [1, 2006.01]
- 5/08 • with hot air led through radiators **[1, 2006.01]**
- 5/10 • with hot air led through heat-exchange ducts in the walls, floor, or ceiling [1, 2006.01]
- 5/12 using heat pumps **[5, 2006.01]**
- 7/00 Central heating systems employing heat-transfer fluids not covered by groups F24D 1/00-F24D 5/00, e.g. oil, salt, gas (F24D 10/00, F24D 11/00 take precedence) [1, 2006.01]
- 9/00 Central heating systems employing combinations of heat-transfer fluids covered by two or more of groups F24D 1/00-F24D 7/00 (F24D 10/00, F24D 11/00 take precedence) [1, 2006.01]
- 9/02 Hot water and steam systems **[1, 2006.01]**
- **10/00** District heating systems [5, 2006.01]
- 11/00 Central heating systems using heat accumulated in storage masses (self-contained storage heating units F24D 15/02; storage masses, see the relevant subclasses) [1, 2006.01]

11/02 • using heat pumps **[1, 2006.01]** 

12/02

- 12/00 Other central heating systems [1, 2006.01]
  - having more than one heat source (F24D 3/18, F24D 5/12, F24D 11/02 take precedence) [5, 2006.01]

#### Other domestic- or space-heating systems

- **13/00 Electric heating systems** (electric water or air heaters F24H) **[1, 2006.01]**
- 13/02 solely using resistance heating, e.g. underfloor heating [1, 2006.01]
- using electric heating of heat-transfer fluid in separate units of the system [1, 2006.01]
- 15/00 Other domestic- or space-heating systems [1, 2006.01]
- 15/02 consisting of self-contained heating units, e.g. storage heaters [3, 2006.01]
- 15/04 using heat pumps **[5, 2006.01]**
- 17/00 **Domestic hot-water supply systems** (combined with domestic- or space-heating systems F24D 1/00-F24D 15/00) [1, 2006.01]
- 17/02 using heat pumps **[5, 2006.01]**
- **19/00 Details** (of water or air heaters F24H 9/00; of heatexchange or heat-transfer apparatus, of general application F28F) [3, 2006.01]
- 19/02 Arrangement of mountings or supports for radiators [3, 2006.01]
- 19/04 • in skirtings **[3, 2006.01]**
- 19/06 Casings, cover lids or ornamental panels, for radiators [3, 2006.01]
- 19/08 Arrangements for drainage, venting or aerating (valves for drainage F16K, e.g. F16K 21/00, for venting or aerating F16K 24/00) [3, 2006.01]
- 19/10 Arrangement or mounting of control or safety devices (control valves F16K; only the heater being controlled F24H 9/20) [3, 2006.01]

F24F AIR-CONDITIONING; AIR-HUMIDIFICATION; VENTILATION; USE OF AIR CURRENTS FOR SCREENING (removing dirt or fumes from areas where they are produced B08B 15/00; vertical ducts for carrying away waste gases from buildings E04F 17/02; tops for chimneys or ventilating shafts, terminals for flues F23L 17/02)

#### Note(s) [3]

- In this subclass:
  - air-humidification as auxiliary treatment in air-conditioning, i.e. in units wherein the air is also either cooled or heated, is covered by groups F24F 1/00 or F24F 3/14;
  - air-humidification per se, e.g. "room humidifiers", is covered by group F24F 6/00.
- 2. In this subclass, the following terms or expressions are used with the meanings indicated:
  - "air-conditioning" means the supply of air to rooms or spaces by means which provide for the treatment of the air in at least two of the following ways:
    - heating cooling any other kind of treatment, e.g. humidification;
  - "ventilation" means the supply of air to, or its extraction from, rooms or spaces, and systems for circulating air within rooms or spaces, but does not cover the mere treatment of air being supplied to, extracted from, or circulated within, rooms or spaces.

#### **Subclass index**

AIR-CONDITIONING	
Room units; central systems; other systems or apparatus	1/00, 3/00, 5/00
AIR-HUMIDIFICATION	
VENTILATION	7/00
SCREENING BY AIR CURRENTS	9/00
COMMON DETAILS	
Control, safety	11/00
Use of energy recovery systems	12/00
Other details	13/00

#### Air-conditioning

1/00	Room units, e.g. separate or self-contained units or
	units receiving primary air from a central
	station [1, 2006.01, 2011.01]

- in which secondary air is induced by injector action of the primary air [3, 2006.01, 2011.01]
- self-contained, i.e. with all apparatus for treatment installed in a common casing [1, 2006.01, 2011.01]
- 1/04 • Arrangements for portability **[1, 2006.01, 2011.01]**
- Separate outdoor units, e.g. outdoor unit to be linked to a separate room unit comprising a compressor and a heat exchanger [2011.01]

#### Note(s) [2011.01]

In this group, the first place priority rule is applied, i.e. at each hierarchical level, in the absence of an indication to the contrary, classification is made in the first appropriate place.

- 1/08 • Compressors specially adapted for separate outdoor units **[2011.01]**
- 1/10 • Arrangement or mounting thereof [2011.01]
- 1/12 • Vibration or noise prevention therefor [2011.01]
- 1/14 Heat exchangers specially adapted for separate outdoor units [2011.01]
- 1/16 • Arrangement or mounting thereof [2011.01]
- 1/18 • characterised by their shape **[2011.01]**
- 1/20 Electric components for separate outdoor units [2011.01]
- 1/22 • Arrangement or mounting thereof [2011.01]
- 1/24 • Cooling of electric components [2011.01]
- 1/26 Refrigerant piping **[2011.01]**
- 1/28 • for connecting several separate outdoor units [2011.01]
- 1/30 • for use inside the separate outdoor units [2011.01]
- 1/32 • for connecting the separate outdoor unit to indoor units [2011.01]
- 1/34 • Protection means therefor, e.g. covers for refrigerant pipes [2011.01]
- 1/36 • Drip trays for outdoor units **[2011.01]**
- 1/38 Fan details of outdoor units, e.g. bell-mouth shaped inlets or fan mountings [2011.01]
- 1/40 Vibration or noise prevention at outdoor units (for outdoor unit compressors F24F 1/12) [2011.01]
- 1/42 characterised by the use of the condensate, e.g. for enhanced cooling [2011.01]
- 1/44 characterised by the use of internal combustion engines [2011.01]
- 1/46 Component arrangements in separate outdoor units [2011.01]

- 1/48 • characterised by airflow, e.g. inlet or outlet airflow [2011.01]
- 1/50 • with outlet air in upward direction [2011.01]
- 1/52 • Inlet and outlet arranged on the same side, e.g. for mounting in a wall opening [2011.01]
- 1/54 • • Inlet and outlet arranged on opposite sides [2011.01]
- 1/56 Casing or covers of separate outdoor units, e.g. fan guards [2011.01]
- 1/58 • Separate protective covers for outdoor units, e.g. solar guards, snow shields or camouflage [2011.01]
- 1/60 Arrangement or mounting of the outdoor unit [2011.01]
- 1/62 • Wall-mounted [2011.01]
- 1/64 • Ceiling-mounted, e.g. below a balcony **[2011.01]**
- 1/66 • under the floor level **[2011.01]**
- 1/68 • Arrangement of multiple separate outdoor units [2011.01]
- 3/00 Air-conditioning systems in which conditioned primary air is supplied from one or more central stations to distributing units in the rooms or spaces where it may receive secondary treatment;

  Apparatus specially designed for such systems (room units F24F 1/00) [1, 2006.01]
- 3/02 characterised by the pressure or velocity of the primary air [1, 3, 2006.01]
- 3/04 operating with high pressure or high velocity [1, 2006.01]
- Systems in which all treatment is given in the central station, i.e. all-air systems [3, 2006.01]
- 3/048 with temperature control at constant rate of air-flow [3, 2006.01]
- 3/052 • Multiple duct systems, e.g. systems in which hot and cold air are supplied by separate circuits from the central station to mixing chambers in the spaces to be conditioned [3, 2006.01]
- the air at least partially flowing over lighting fixtures, the heat of which is dissipated or used (outlets for directing or distributing air into rooms or spaces combined with lighting fixtures F24F 13/078) [3, 2006.01]
- characterised by the arrangements for the supply of heat-exchange fluid for the subsequent treatment of primary air in the room units [1, 2006.01]
- 3/08 • with separate supply and return lines for hot and cold heat-exchange fluids [1, 2006.01]
- with separate supply lines and common return line for hot and cold heat-exchange fluids [1, 2006.01]

3/12	<ul> <li>characterised by the treatment of the air otherwise than by heating and cooling [1, 2006.01]</li> </ul>	11/06	<ul> <li>solely for controlling the supply of heating or cooling fluids for secondary treatment</li> </ul>
3/14	<ul> <li>by humidification; by</li> </ul>		(F24F 11/08 takes precedence) [1, 2006.01]
	dehumidification [1, 2006.01]	11/08	<ul> <li>for controlling the primary treatment of</li> </ul>
3/147	<ul> <li>• with both heat and humidity transfer between supplied and exhausted air [3, 2006.01]</li> </ul>		air <b>[1, 2006.01]</b>
3/153	• • • with subsequent heating, i.e. with the air, given the required humidity in the central station, passing a heating element to achieve the required temperature [3, 2006.01]	12/00	Use of energy recovery systems in air conditioning, ventilation or screening (with both heat and humidity transfer between supplied and exhausted air F24F 3/147) [4, 2006.01]
3/16	• by purification, e.g. by filtering; by sterilisation; by ozonisation [1, 2006.01]	13/00	Details common to, or for air-conditioning, air- humidification, ventilation or use of air currents for screening [1, 2006.01]
5/00	Air-conditioning systems or apparatus not covered	13/02	• Ducting arrangements [1, 2006.01]
	by group F24F 1/00 or F24F 3/00 [1, 2006.01]	13/04	Air-mixing units (F24F 13/06 takes)
			precedence) [1, 2006.01]
6/00	Air-humidification [3, 2006.01]	13/06	• • Outlets for directing or distributing air into rooms or spaces, e.g. ceiling air diffuser [1, 2006.01]
6/02	• by evaporation of water in the air [3, 2006.01]	13/062	<ul> <li>having one or more bowls or cones diverging in</li> </ul>
6/04	<ul> <li>using stationary unheated wet</li> </ul>		the flow direction [3, 2006.01]
	elements [3, 2006.01]	13/065	• • • formed as cylindrical or spherical bodies which
6/06	• • using moving unheated wet elements [3, 2006.01]	10/000	are rotatable [3, 2006.01]
6/08	<ul> <li>using heated wet elements [3, 2006.01]</li> </ul>	13/068	• • • formed as perforated walls, ceilings or floors
6/10	• • heated electrically [3, 2006.01]	12/072	(F24F 13/078 takes precedence) [3, 2006.01]
6/12	• by forming water dispersions in the air [3, 2006.01]	13/072	• • of elongated shape, e.g. between ceiling panels [3, 2006.01]
6/14	• • using nozzles [3, 2006.01]	13/075	<ul> <li>having parallel rods or lamellae directing the</li> </ul>
6/16	• • using rotating elements [3, 2006.01]	13/0/3	outflow, e.g. the rods or lamellae being
6/18	• by injection of steam into the air [3, 2006.01]		individually adjustable (F24F 13/072 takes precedence) [3, 2006.01]
7/00	Ventilation [1, 2006.01]	13/078	• • • combined with lighting fixtures [3, 2006.01]
7/007	<ul> <li>with forced flow (using ducting systems</li> </ul>	13/0/6	Air-flow control members, e.g. louvres, grilles, flaps
7/013	F24F 7/06) [3, 2006.01]  • using wall or window fans, displacing air through	13/00	or guide plates (F24F 7/013, F24F 13/06 take precedence) [1, 3, 2006.01]
	the wall or window [3, 2006.01]	13/10	• movable, e.g. dampers [1, 2006.01]
7/02	• Roof ventilation (ventilation of roof coverings	13/12	<ul> <li>• built-up of sliding members [1, 2006.01]</li> </ul>
<b>=</b> /0.4	E04D) [1, 3, 6, 2006.01]	13/14	<ul> <li>• • built-up of tilting members, e.g.</li> </ul>
7/04	• with ducting systems [1, 2006.01]	15, 1.	louvre [1, 2006.01]
7/06	• • with forced air circulation, e.g. by fan [1, 2006.01]	13/15	• • • with parallel simultaneously tiltable
7/08	• • with separate ducts for supplied and exhausted		lamellae <b>[3, 2006.01]</b>

F24H FLUID HEATERS, e.g. WATER OR AIR HEATERS, HAVING HEAT-GENERATING MEANS, IN GENERAL (heat-transfer, heat-exchange or heat-storage materials C09K 5/00; tube furnaces for thermal non-catalytic cracking C10G 9/20; devices, e.g. valves, for venting and aerating enclosures F16K 24/00; steam traps or like apparatus F16T; steam generation F22; combustion apparatus F23; domestic stoves or ranges F24B, F24C; domestic- or space-heating systems F24D; furnaces, kilns, ovens, retorts F27; heat-exchangers F28; electric heating elements or arrangements H05B)

#### Note(s) [3]

- The distinguishing feature of the air heaters covered by this subclass is that the heat is predominantly released to the air by convection, mostly by forced circulation of the air. The domestic stoves or ranges covered by subclass F24B, F24C may also be fired or electric air heaters but they release their heat to a considerable extent by radiation and only to some extent by natural convention.
- 2. In this subclass, the following terms or expressions are used with the meanings indicated:
  - "water" includes other liquids and means always the liquid to be heated;
  - "air" includes other gases or gas mixtures and means always the gas to be heated;
  - "furnace tubes" means tubes inside the heater wherein combustion is performed;
  - "fire tubes" means tubes inside the heater through which flue-gases flow from a combustion chamber located outside the tubes;
  - "heater" means apparatus including both heat generating means and means for transferring the generated heat to water or air.
- 3. All storage heaters are classified in group F24H 7/00.

#### **Subclass index**

WATER HEATERS	1/00
AIR HEATERS; STORAGE HEATERS	3/00, 7/00
FLUID HEATERS USING HEAT PUMPS	4/00
COMBINATIONS OF WATER AND AIR HEATERS	6/00
FLUID HEATERS FOR EXTRACTING LATENT HEAT FROM FLUE GASES	8/00
DETAILS	9/00

- 1/00 Water heaters having heat generating means, e.g. boiler, flow-heater, water-storage heater (F24H 7/00, F24H 8/00 take precedence; details F24H 9/00; steam boilers F22B; domestic stoves or ranges with additional provisions for heating water F24B 9/00, F24C 13/00) [1, 5, 2006.01]
- 1/06 Portable or mobile, e.g. collapsible [1, 2006.01]
- Packaged or self-contained boilers, i.e. water heaters with control devices and pump in a single unit [1, 2006.01]
- Continuous-flow heaters, i.e. heaters in which heat is generated only while the water is flowing, e.g. with direct contact of the water with the heating medium (F24H 1/50 takes precedence) [1, 5, 2006.01]
- 1/12 • in which the water is kept separate from the heating medium [1, 2006.01]
- 1/14 • by tubes, e.g. bent in serpentine form **[1, 2006.01]**
- 1/16 • helically or spirally coiled **[1, 2006.01]**
- Water-storage heaters (F24H 1/50 takes precedence; combined with water-heating stoves for central heating F24H 1/22) [1, 5, 2006.01]
- 1/20 • with immersed heating elements, e.g. electric elements or furnace tubes [1, 2006.01]
- Water heaters other than continuous-flow or waterstorage heaters, e.g. water heaters for central heating (F24H 1/50 takes precedence) [1, 5, 2006.01]
- 1/24 with water mantle surrounding the combustion chamber or chambers (F24H 1/40, F24H 1/44 take precedence) [1, 3, 2006.01]
- 1/26 • the water mantle forming an integral body [1, 2006.01]
- 1/28 • including one or more furnace or fire tubes [1, 2006.01]
- 1/30 • the water mantle being built-up from sections [1, 2006.01]

- 1/32 • with vertical sections arranged side by side [1, 2006.01]
- 1/34 • with water chamber arranged adjacent to the combustion chamber or chambers, e.g. above or at side (F24H 1/24, F24H 1/44 take precedence) [1, 2006.01]
- 1/36 • the water chamber including one or more fire tubes [1, 2006.01]
- 1/38 with water contained in separate elements, e.g. radiator-type element (F24H 1/40, F24H 1/44 take precedence) [1, 2006.01]
- 1/40 • with water tube or tubes (F24H 1/44 takes precedence) [1, 2006.01]
- 1/41 • in serpentine form [3, 2006.01]
- 1/43 • helically or spirally coiled **[3, 2006.01]**
- with combinations of two or more of the types covered by groups F24H 1/24-F24H 1/40 [1, 2006.01]
- Water heaters having plural combustion chambers [1, 2, 5, 2006.01]
- Water heaters for central heating incorporating heaters for domestic water [5, 2006.01]
- 1/50 incorporating domestic water tanks [5, 2006.01]
- 1/52 incorporating heat exchangers for domestic water (F24H 1/50 takes precedence) **[5, 2006.01]**
- 3/00 Air heaters having heat generating means (F24H 7/00, F24H 8/00 take precedence; details F24H 9/00; domestic stoves or ranges with additional provisions for convection heating of air F24B, F24C) [1, 5, 2006.01]
- 3/02 with forced circulation (F24H 3/12 takes precedence) [1, 2006.01]
- 3/04 the air being in direct contact with the heating medium, e.g. electric heating element [1, 2006.01]

3/12

3/06	<ul> <li>the air being kept separate from the heating medium, e.g. using forced circulation of air over radiators [1, 2006.01]</li> </ul>
3/08	• • • by tubes [1, 2006.01]
3/10	• • • by plates [1, 2006.01]

with additional heating arrangements [1, 2006.01]

#### 4/00 Fluid heaters using heat pumps [5, 2006.01]

- 4/02 Liquid heaters **[5, 2006.01]**
- 4/04 • Storage heaters [5, 2006.01]
- 4/06 Gas heaters **[5, 2006.01]**

## **Combined water and air heaters** (F24H 8/00 takes precedence) **[1, 5, 2006.01]**

- 7/00 Storage heaters, i.e. heaters in which the energy is stored as heat in masses for subsequent release (domestic stoves or ranges with additional heat storage masses F24B 1/24, F24C 15/34) [1, 2006.01]
- the released heat being conveyed to a transfer fluid, e.g. air, water [1, 2006.01]
- 7/04 with forced circulation of the transfer fluid [1, 2006.01]
- 7/06 the released heat being radiated [1, 2006.01]

8/00 Fluid heaters having heat-generating means specially adapted for extracting latent heat from flue gases by means of condensation [5, 2006.01]

#### 9/00 Details [1, 2006.01]

- 9/02 Casings; Cover lids; Ornamental panels [1, 2006.01]
- 9/06 Arrangement of mountings or supports [1, 2006.01]
- 9/12 Connecting heaters to circulation pipes (pipe joints in general F16L) [1, 2006.01]
- 9/14 Connecting different sections, e.g. in water heaters (in radiators F28F 9/26) [1, 2006.01]
- 9/16 Arrangements for water drainage (valves for drainage F16K, e.g. F16K 21/00; in pipes or pipe systems in general F16L 55/00; in domestic-or space-heating systems F24D 19/08) [1, 2006.01]
- 9/18 Arrangement or mounting of grates, burners, or heating elements (burners F23D; grates F23H; electric heating elements H05B) [1, 2006.01]
- Arrangement or mounting of control or safety devices (control valves F16K; safety devices for burners F23D; combustion control devices F23N; of systems comprising a heater, see the relevant subclasses, e.g. of control heating systems F24D 19/10; automatic switching for electric heating apparatus H05B 1/02) [1, 2006.01]

## **PRODUCTION OR USE OF HEAT NOT OTHERWISE PROVIDED FOR** (materials therefor C09K 5/00; engines or other mechanisms for producing mechanical power from heat, <u>see</u> the relevant classes, e.g. F03G for using natural heat)

## 1/00 Apparatus or devices using heat produced by exothermal chemical reactions other than by combustion (for cooking-vessels A47J 36/28; self-heating compresses A61F 7/03; materials for the production of heat or cold undergoing non-reversible chemical reactions, other than by combustion, when used C09K 5/18) [1, 2006.01]

2/00 Use of solar heat, e.g. solar heat collectors (distillation or evaporation of water using solar energy C02F 1/14; roof covering aspects of energy collecting devices E04D 13/18; devices for producing mechanical power from solar energy F03G 6/00; semiconductor devices specially adapted for converting solar energy into electrical energy H01L 31/00; photovoltaic [PV] cells including means directly associated with the PV cell to utilise heat energy H01L 31/0525; PV modules including means associated with the PV module to utilise heat energy H02S 40/44) [4, 5, 2006.01, 2014.01]

#### Note(s) [2014.01]

Supporting structures also intended for use with photovoltaic modules should further be classified in the relevant groups of subclass H02S.

- Solar heat collectors with support for article heated, e.g. stoves, ranges, crucibles, furnaces or ovens using solar heat [4, 2006.01]
- Solar heat collectors having working fluid conveyed through collector [4, 2006.01]
- 2/05 surrounded by a transparent enclosure, e.g. evacuated solar collectors [6, 2006.01]
- 2/06 having concentrating elements (optical elements or systems per se G02B) [4, 2006.01]
- 2/07 • Receivers working at high temperature, e.g. for solar power plants **[6, 2006.01]**
- 2/08 • having lenses as concentrating elements [4, 2006.01]

- 2/10 • having reflectors as concentrating elements [4, 2006.01]
- 2/12 • parabolic **[4, 2006.01]**
- 2/13 • hemispherical **[6, 2006.01]**
- 2/14 • semi-cylindrical or cylindroparabolic **[4, 2006.01]**
- 2/15 • conical **[6, 2006.01]**
- 2/16 • having flat plates **[4, 2006.01]**
- 2/18 • spaced, opposed interacting reflecting surfaces [4, 2006.01]
- 2/20 the working fluid being conveyed between plates [4, 2006.01]
- 2/22 • having extended surfaces, e.g. protrusions, corrugations (F24J 2/28 takes precedence) [4, 2006.01]
- the working fluid trickling freely over collector elements [6, 2006.01]
- • the working fluid being conveyed through tubular heat absorbing conduits **[4, 2006.01]**
- 2/26 • having extended surfaces, e.g. protrusions (F24J 2/28 takes precedence) [4, 2006.01]
- 2/28 having permeable mass, foraminous or porous materials [4, 2006.01]
- 2/30 with means to exchange heat between plural fluids [4, 2006.01]
- 2/34 having heat storage mass **[4, 2006.01]**
- Rollable or foldable collector units [4, 2006.01]
- employing tracking means (F24J 2/02, F24J 2/06 take precedence; rotary supports or mountings therefor F24J 2/54; supporting structures of photovoltaic modules for generation of electric power specially adapted for solar tracking systems H02S 20/32) [4, 2006.01, 2014.01]
- 2/40 Control arrangements [4, 2006.01]

2/42	• Solar heat systems not otherwise provided for [4, 2006.01]	2/52	<ul> <li>Arrangement of mountings or supports [4, 2006.01]</li> </ul>
2/44 2/46	<ul> <li>having thermosiphonic circulation [4, 2006.01]</li> <li>Component parts, details or accessories of solar heat collectors [4, 2006.01]</li> </ul>	2/54	• • • specially adapted for rotary movement [6, 2006.01]
2/48 2/50 2/51	<ul> <li>characterised by the absorber material [4, 2006.01]</li> <li>Transparent coverings [4, 2006.01]</li> <li>Thermal insulation (F24J 2/50 takes precedence) [6, 2006.01]</li> </ul>	3/00 3/06 3/08	<ul> <li>Other production or use of heat, not derived from combustion (use of solar heat F24J 2/00) [1, 2006.01]</li> <li>using natural heat [4, 2006.01]</li> <li>using geothermal heat (devices for producing mechanical power from geothermal energy F03G 4/00) [4, 5, 2006.01]</li> </ul>

## F25 REFRIGERATION OR COOLING; COMBINED HEATING AND REFRIGERATION SYSTEMS; HEAT PUMP SYSTEMS; MANUFACTURE OR STORAGE OF ICE; LIQUEFACTION OR SOLIDIFICATION OF GASES

**REFRIGERATION MACHINES, PLANTS, OR SYSTEMS; COMBINED HEATING AND REFRIGERATION SYSTEMS; HEAT PUMP SYSTEMS** (heat-transfer, heat-exchange or heat-storage materials, e.g. refrigerants, or materials for the production of heat or cold by chemical reactions other than by combustion C09K 5/00; pumps, compressors F04; use of heat pumps for domestic or space-heating or for domestic hot-water supply F24D; air-conditioning, air-humidification F24F; fluid heaters using heat pumps F24H)

#### Note(s) [5]

Attention is drawn to Note (2) following the title of subclass F24F.

#### Subclass index

#### MODE OF OPERATION

Compression type	
characterised by the cycle	1/00, 13/00
characterised by the arrangement	
self-contained rotary; with several evaporation circuits; with several condenser circuits; wi	
cascade operation	3/00, 5/00, 6/00, 7/00
characterised by the refrigerant	9/00
using turbines	11/00
Sorption type	15/00, 17/00
Other types having a single mode of operation, using: evaporation without recovery; electric or	
magnetic effects; other effect	
Combinations: of above modes of operation; of heating and refrigerating	25/00, 29/00
Heat pumpsUsing special energy source	30/00
	27/00
DETAILS, ARRANGEMENTS, OR COMPONENTS	
Components: boilers, analysers, rectifiers; boiler-absorbers; absorbers, adsorbers; evaporators,	
condensers; subcoolers, desuper- heaters, superheaters	33/00, 35/00, 37/00, 39/00, 40/00
Arrangements	
compressor arrangement; fluid circulation; separating or purifying gases	31/00, 41/00, 43/00
for charging or discharging refrigerant; for combating corrosion or deposits	45/00, 47/00
Mounting of control and safety devices	

#### Compression machines, plant, or systems

- 1/00 Compression machines, plant or systems with nonreversible cycle (F25B 3/00, F25B 5/00, F25B 6/00, F25B 7/00, F25B 9/00 take precedence) [1, 5, 2006.01]
- with compressor of reciprocating-piston type (F25B 1/10 takes precedence) [1, 2006.01]
- 1/04 with compressor of rotary type (F25B 1/10 takes precedence) [1, 2006.01]
- 1/047 • of screw type **[5, 2006.01]**
- 1/053 • of turbine type **[5, 2006.01]**

- with compressor of jet type, e.g. using liquid under pressure (F25B 1/10 takes precedence) [1, 2006.01]
- 1/08 • using vapour under pressure **[1, 2006.01]**
- 1/10 with multi-stage compression (with cascade operation F25B 7/00) [1, 2006.01]
- 3/00 Self-contained rotary compression machines, i.e. with compressor, condenser, and evaporator rotating as a single unit [1, 2006.01]

5/00	Compression machines, plant, or systems, with	17/02	the absorbent or adsorbent being a liquid, e.g. brine
3/00	several evaporator circuits, e.g. for varying		(F25B 17/10 takes precedence) [1, 2006.01]
	<b>refrigerating capacity</b> (with cascade operation F25B 7/00) <b>[1, 2006.01]</b>	17/04	<ul> <li>with two or more boilers operating alternately [1, 2006.01]</li> </ul>
5/02	<ul> <li>arranged in parallel [5, 2006.01]</li> </ul>	17/06	• • with the boiler and evaporator built-up as a unit in
5/04	• arranged in series [5, 2006.01]	17/08	<ul><li>a tiltable or revolving arrangement [1, 2006.01]</li><li>the absorbent or adsorbent being a solid, e.g. salt</li></ul>
6/00	Compression machines, plant, or systems, with several condenser circuits [5, 2006.01]	17/10	(F25B 17/12 takes precedence) [1, 5, 2006.01] • using the endothermic solution of salt [1, 2006.01]
6/02	<ul> <li>arranged in parallel [5, 2006.01]</li> </ul>	17/10	<ul> <li>using desorption of hydrogen from a</li> </ul>
6/04	• arranged in series <b>[5, 2006.01]</b>	1//12	hydride [5, 2006.01]
7/00	Compression machines, plant, or systems, with		
	cascade operation, i.e. with two or more circuits, the heat from the condenser of one circuit being		s, plant, or systems, with a single mode of operation,
	absorbed by the evaporator of the next circuit	<u>not cover</u>	red by groups F25B 1/00-F25B 17/00
	(F25B 9/00 takes precedence) <b>[1, 2006.01]</b>	19/00	Machines, plant, or systems, using evaporation of a
		15,00	refrigerant but without recovery of the
9/00	Compression machines, plant, or systems, in which		vapour [1, 2006.01]
	the refrigerant is air or other gas of low boiling	19/02	<ul> <li>using fluid jet, e.g. of steam [1, 2006.01]</li> </ul>
0./02	point [1, 2006.01]	19/04	<ul> <li>using liquid jet, e.g. of water [1, 2006.01]</li> </ul>
9/02	<ul> <li>using Joule-Thompson effect; using vortex effect [1, 2006.01]</li> </ul>	24 / 22	
9/04	• • using vortex effect [5, 2006.01]	21/00	Machines, plant, or systems, using electric or magnetic effects [1, 2006.01]
9/06	• using expanders (F25B 9/10 takes	21/02	<ul> <li>using Peltier effect; using Nernst-Ettinghausen effect</li> </ul>
	precedence) [5, 2006.01]	21/02	(thermoelectric elements H01L 35/00,
9/08	• using ejectors (F25B 9/10 takes		H01L 37/00) [1, 2006.01]
	precedence) [5, 2006.01]	21/04	• • reversible [5, 2006.01]
9/10	<ul> <li>with several cooling stages [5, 2006.01]</li> </ul>		
9/12	<ul> <li>using 3He-4He dilution [5, 2006.01]</li> </ul>	23/00	Machines, plant, or systems, with a single mode of
9/14	<ul> <li>characterised by the cycle used, e.g. Stirling</li> </ul>		operation not covered by groups F25B 1/00- F25B 21/00, e.g. using selective radiation
	cycle <b>[5, 2006.01]</b>		effect [1, 2006.01]
11/00	Compression machines, plant, or systems, using		
	turbines, e.g. gas turbines [1, 2006.01]		
11/02	<ul> <li>as expanders (F25B 9/06 takes</li> </ul>	25 /00	Machines alout assessment assists a southing of
	precedence) [5, 2006.01]	25/00	Machines, plant, or systems, using a combination of modes of operation covered by two or more of the
11/04	• • centrifugal type [5, 2006.01]		groups F25B 1/00-F25B 23/00 (combinations of two or

**PRODUCTION, WORKING, STORING OR DISTRIBUTION OF ICE** (frozen sweets, including ice-cream, their production A23G 9/00; concentrating solutions by removing frozen solvents B01D 9/04; purification of water by freezing C02F 1/22; refrigeration machines, plants, or systems F25B; solidification of gases or gaseous mixtures F25J; freeze-drying F26B) [2]

#### Note(s) [2]

In this subclass, the following term is used with the meaning indicated:

"ice" means any frozen liquid and also covers frozen semiliquids or pasty substances.

<b>1/00</b> 1/02	<ul><li><b>Production of ice</b> (F25C 3/00 takes precedence) [1, 2006.01]</li><li>• Production of natural ice, i.e. without</li></ul>	producti recreatio	or apparatus specially adapted for the on of ice or snow for winter sports or similar onal purposes, e.g. for sporting installations;
1/04 1/06 1/08	<ul> <li>refrigeration [1, 2006.01]</li> <li>by using stationary moulds [1, 2006.01]</li> <li>open or openable at both ends [1, 2006.01]</li> <li>by immersing freezing chambers or plates into water [1, 2006.01]</li> <li>by using rotating or otherwise moving moulds (F25C 1/08 takes precedence) [1, 2006.01]</li> </ul>	for artific snow or s snow or s sporting 3/02 • for ice	con of artificial snow (foundations or pavings cial surfaces for outdoor or indoor practice of the sports E01C 13/10; working on surfaces of the in order to make them suitable for traffic or purposes E01H 4/00) [1, 2006.01] or rinks [1, 2006.01] dging trails or ski trails; Production of artificial
1/12	<ul> <li>by freezing water on cooled surfaces, e.g. to form slabs [1, 2006.01]</li> </ul>		[1, 2006.01] 3, storing or distribution of ice [1, 2006.01]
1/14	• to form thin sheets which are removed by scraping or wedging, e.g. in the form of flakes [1, 2006.01]	5/02 • Tools	or machines for disintegrating, removing, or sting ice [1, 2006.01]
1/16	<ul> <li>by partially evaporating water in a vacuum [1, 2006.01]</li> </ul>		hout the use of saws [1, 2006.01]
1/18	<ul> <li>of a particular transparency or translucency, e.g. by injecting air [1, 2006.01]</li> </ul>		by deforming bodies with which the ice is in contact, e.g. by inflatable members [1, 2006.01]
1/20	• by agitation [1, 2006.01]		by heating bodies in contact with the ice [1, 2006.01]
1/22	<ul> <li>Construction of moulds; Filling devices therefor (metering by volume in general G01F) [1, 2006.01]</li> </ul>		<ul> <li>using hot refrigerant; using fluid heated by refrigerant [1, 2006.01]</li> </ul>
1/24	• • for refrigerators, e.g. freezing trays [1, 2006.01]	5/12 • • •	Ice-shaving machines [1, 2006.01]
			or machines for shaping or finishing ice pieces, e presses [1, 2006.01]
		5/16 • Tools	or devices for ice handling not covered by any

IPC (2016.01), Section F 159

other subclass **[1, 2006.01]** 

5/18 • Storing ice [1, 2006.01]

## **REFRIGERATORS; COLD ROOMS; ICE-BOXES; COOLING OR FREEZING APPARATUS NOT COVERED BY ANY OTHER SUBCLASS** (refrigerated showcases A47F 3/04; thermally-insulated vessels for domestic use A47J 41/00; refrigerated vehicles, <u>see</u> the appropriate subclasses of classes B60-B64; containers with thermal insulation in general B65D 81/38; heat-transfer, heat-exchange or heat-storage materials, e.g. refrigerants, or materials for the production of heat or cold by chemical reactions other than by combustion C09K 5/00; thermally-insulated vessels for liquefied or solidified gases F17C; air-conditioning or air-

humidification F24F; refrigeration machines, plants, or systems F25B; cooling of instruments or comparable apparatus without refrigeration G12B; cooling of engines or pumps, see the relevant classes)

#### Note(s) [5, 2009.01]

- 1. Devices associated with refrigerating machinery are classified in groups F25D 11/00-F25D 16/00.
- 2. In this subclass, the following term is used with the meaning indicated:
  - "device" means an enclosed space to be cooled; such devices being associated either with refrigerating machinery, e.g. in a refrigerator, or with other cold sources, e.g. in an ice-box.
- 3. Attention is drawn to Note (2) following the title of subclass F24F.

#### **Subclass index**

DEVICES NOT ASSOCIATED WITH REFRIGERATING MACHINERY Using cold air or water; other cold materials or bodies	1/00 3/00
Using endothermic chemical reactions, or evaporation without recovery	
Other devices, combinations	
DEVICES ASSOCIATED WITH REFRIGERATING MACHINERY: SELF-CONTAINED MOVABLE;	
STATIONARY; OTHER	11/00, 13/00, 15/00
In combination with a cooling mode not associated with refrigerating machinery	16/00
STRUCTURAL PARTS OR ARRANGEMENTS, OF GENERAL APPLICATION: DEFROSTING;	
GENERAL FEATURES; HANDLING OF ARTICLES TO BE COOLED	21/00, 23/00, 25/00
CIRCULATING COOLING FLUID OR GAS; LIGHTING	17/00, 27/00
ARRANGEMENT OR MOUNTING: OF REFRIGERATION UNITS; OF CONTROL OR SAFETY	
DEVICES	19/00, 29/00
OTHER APPARATUS	31/00

#### **Devices not associated with refrigerating machinery**

1/00 Devices using naturally-cold air or water [1, 2006.01]

using naturally-cold water, e.g. household-tap water [1, 2006.01]

3/00 Devices using other cold materials; Devices using cold-storage bodies [1, 2006.01]

3/02 • using ice, e.g. ice-boxes **[1, 2006.01]** 

3/04 • • Stationary cabinets **[1, 2006.01]** 

3/06 • • Movable containers **[1, 2006.01]** 

3/08 • • portable, i.e. adapted to be carried personally [1, 2006.01]

• using liquefied gases, e.g. liquid air [1, 2006.01]

3/11 • • with conveyors carrying articles to be cooled through the cooling space **[4, 2006.01]** 

using solidified gases, e.g. carbon-dioxide snow [1, 2006.01]

3/14 • portable, i.e. adapted to be carried personally [1, 2006.01]

5/00 Devices using endothermic chemical reactions, e.g. using frigorific mixtures [1, 2006.01]

5/02 • portable, i.e. adapted to be carried personally [1, 2006.01]

7/00 Devices using evaporation effects without recovery of the vapour (butter or cheese dishes with cooling devices A47G 19/26) [1, 2006.01] 9/00 Devices not associated with refrigerating machinery and not covered by groups F25D 1/00-F25D 7/00; Combinations of devices covered by two or more of the groups F25D 1/00-F25D 7/00 [1, 2006.01]

#### **Devices associated with refrigerating machinery**

11/00 Self-contained movable devices associated with refrigerating machinery, e.g. domestic refrigerators [1, 2006.01]

• with cooling compartments at different temperatures [1, 2006.01]

11/04 • specially adapted for storing deep-frozen articles (F25D 11/02 takes precedence) [1, 2006.01]

13/00 Stationary devices associated with refrigerating machinery, e.g. cold rooms [1, 2006.01]

13/02 • with several cooling compartments, e.g. refrigerated locker systems [1, 2006.01]

13/04 • the compartments being at different temperatures [1, 2006.01]

 with conveyors carrying articles to be cooled through the cooling space [1, 2006.01]

15/00 Devices associated with refrigerating machinery not covered by group F25D 11/00 or F25D 13/00, e.g. non-self-contained movable devices [1, 2006.01]

16/00	Devices using a combination of a cooling mode	21/10	• • by spraying with fluid [1, 2006.01]
	associated with refrigerating machinery with a cooling mode not associated with refrigerating	21/12	<ul> <li>by hot-fluid circulating system separate from the refrigerant system [1, 2006.01]</li> </ul>
	machinery [5, 2006.01]	21/14	<ul> <li>Collecting or removing condensed and defrost water; Drip trays [1, 2006.01]</li> </ul>
	r features of the devices covered by groups F25D 1/00-	23/00	General constructional features (F25D 21/00 takes
F25D 16/	<u>00 [5]</u>	22 / 22	precedence) [1, 2006.01]
17/00	Arrangements for circulating cooling fluids;	23/02	<ul> <li>Doors; Covers (F25D 23/08 takes precedence) [1, 2006.01]</li> </ul>
	Arrangements for circulating gas, e.g. air, within refrigerated spaces [1, 3, 2006.01]	23/04	<ul> <li>• with special compartments, e.g. butter conditioners [1, 2006.01]</li> </ul>
17/02	• for circulating liquids, e.g. brine [1, 2006.01]	23/06	• Walls (F25D 23/08 takes precedence; containers with
17/04	<ul> <li>for circulating gas, e.g. by natural convection [1, 3, 2006.01]</li> </ul>		thermal insulation B65D 81/38) [1, 4, 2006.01]
17/06	• by forced circulation [1, 2006.01]	23/08	<ul> <li>Parts formed wholly or mainly of plastics</li> </ul>
17/08	• • • using ducts [1, 2006.01]	22/40	materials [1, 2006.01]
		23/10	<ul> <li>Arrangements for mounting in particular locations,</li> <li>e.g. for built-in type, for corner type [1, 2006.01]</li> </ul>
19/00	Arrangement or mounting of refrigeration units with	23/12	<ul> <li>Arrangements of compartments additional to cooling</li> </ul>
19/02	respect to devices [1, 2006.01]  • plug-in type [1, 2006.01]	237 12	compartments; Combinations of refrigerators with

<b>Processes</b>	for	dry	/in	g

1/00	Preliminary treatment of solid materials or objects to
	facilitate drying [1, 2006.01]

- 3/00 Drying solid materials or objects by processes involving the application of heat (in specific machines or apparatus F26B 9/00-F26B 19/00) [1, 2006.01]
- by convection, i.e. heat being conveyed from a heat source to the materials or objects to be dried by a gas or vapour, e.g. air [1, 2006.01]
- the gas or vapour circulating over, or surrounding, the materials or objects to be dried (F26B 3/14 takes precedence) [1, 2006.01]
- 3/06 the gas or vapour flowing through the materials or objects to be dried (F26B 3/14 takes precedence) [1, 2006.01]
- 3/08 • so as to loosen them, e.g. to form a fluidised bed [1, 2006.01]
- 3/084 • with heat exchange taking place in the fluidised bed **[5, 2006.01]**
- 3/088 • using inert thermally-stabilised particles **[5, 2006.01]**
- 3/092 • agitating the fluidised bed, e.g. by vibrating or pulsating **[5, 2006.01]**
- 3/097 • using a magnetic field to stabilise the fluidised bed [5, 2006.01]
- 3/10 the gas or vapour carrying the materials or objects to be dried with it [1, 2006.01]
- 3/12 • in the form of a spray [1, 2006.01]
- 3/14 the materials or objects to be dried being moved by gravity [1, 2006.01]
- 3/16 • in a counter-flow of the gas or vapour **[1, 2006.01]**
- by conduction, i.e. the heat is conveyed from the heat source, e.g. gas flame, to the materials or objects to be dried by direct contact [1, 2006.01]

- 3/20 the heat source being a heated surface (F26B 3/22 takes precedence) [1, 2006.01]
- the heat source and the materials or objects to be dried being in relative motion, e.g. of vibration [1, 2006.01]
- 3/24 • the movement being rotation **[1, 2006.01]**
- 3/26 • the movement being performed by gravity [1, 2006.01]
- 3/28 by radiation, e.g. from the sun [1, 2006.01]
- 3/30 • from infra-red-emitting elements [1, 2006.01]
- by development of heat within the materials or objects to be dried [1, 2006.01]
- 3/34 • by using electrical effects [1, 2006.01]
- 3/347 • Electromagnetic heating, e.g. induction heating or heating using microwave energy [4, 2006.01]
- 3/353 • Resistance heating **[4, 2006.01]**
- 3/36 • by using mechanical effects, e.g. by friction (by using ultrasonic vibration F26B 5/02) [1, 2006.01]
- 5/00 Drying solid materials or objects by processes not involving the application of heat (separating liquids from solids by straining B01D; replacing liquids in wet solids by other liquids, e.g. water by spirit, B01D 12/00; drying by electrophoresis B01J) [1, 2006.01]
- 5/02 by using ultrasonic vibrations **[1, 2006.01]**
- by evaporation or sublimation of moisture under reduced pressure, e.g. in a vacuum [1, 2006.01]
- 5/06 • the process involving freezing [1, 2006.01]
- 5/08 by centrifugal treatment [1, 2006.01]
- 5/10 • the process involving freezing [1, 2006.01]
- 5/12 by suction **[1, 2006.01]**
- 5/14 by applying pressure, e.g. wringing; by brushing; by wiping **[1, 2006.01]**
- by contact with sorbent bodies, e.g. absorbent mould;
   by admixture with sorbent materials [1, 2006.01]

7/00 Drying solid materials or objects by processes using a 13/24 combination of processes not covered by a single one of groups F26B 3/00 or F26B 5/00 [1, 2006.01] F26B 5/00) [1, 2006.01] 13/26 rollers [1, 2006.01] Machines or apparatus for drying 13/28 wiping [1, 2006.01] 9/00 Machines or apparatus for drying solid materials or 13/30 objects at rest or with only local agitation; Domestic rollers [1, 2006.01] airing cupboards [1, 2006.01] 9/02 in buildings (special types of buildings 15/00 E04H) [1, 2006.01] 9/04 • in presses or clamping devices [1, 2006.01] 9/06 • in stationary drums or chambers [1, 2006.01] 9/08 • • including agitating devices [1, 2006.01] 15/02 9/10 · in the open air; in pans or tables in rooms; Drying circle [1, 2006.01] stacks of loose material [1, 2006.01] 15/04 11/00 Machines or apparatus for drying solid materials or 15/06 objects with movement which is nonother [1, 2006.01] progressive [1, 2006.01] 15/08 • in a vertical plane [1, 2006.01] 11/02 in moving drums or other mainly-closed receptacles 15/10 (F26B 11/18 takes precedence) [1, 2006.01] 11/04 rotating about a horizontal or slightly-inclined 15/12 axis [1, 2006.01] inclined [1, 2006.01] 11/06 with stirring devices which are held 15/14 stationary [1, 2006.01] 11/08 rotating about a vertical or steeply-inclined 15/16 axis [1, 2006.01] with stirring devices which are held 11/10 15/18 stationary [1, 2006.01] 11/12 · in stationary drums or other mainly-closed 15/20 receptacles with moving stirring devices (F26B 11/22 inclined [1, 2006.01] takes precedence) [1, 2006.01] 15/22 11/14 · · the stirring device moving in a horizontal or slightly-inclined plane [1, 2006.01] 15/24 11/16 • • the stirring device moving in a vertical or steeply-15/26 inclined plane [1, 2006.01] • on or in moving dishes, trays, pans, or other mainly-11/18 17/00 open receptacles [1, 2006.01] with stirring devices which are held 11/20stationary [1, 2006.01] precedence) [1, 2006.01] 11/22 · on or in stationary dishes, trays, pans, or other 17/02 mainly-open receptacles, with moving stirring devices [1, 2006.01] surfaces [1, 2006.01] 13/00 Machines or apparatus for drying fabrics, fibres, 17/04 yarns, or other materials in long lengths, with

## progressive movement [1, 2006.01]

- 13/02 with movement in a straight line [1, 2006.01]
- 13/04 • • using rollers [1, 2006.01]
- 13/06 · with movement in a sinuous or zig-zag path [1, 2006.01]
- 13/08 • • using rollers [1, 2006.01]
- Arrangements for feeding, heating, or supporting 13/10 materials; Regulating movement, tension, or position of materials (heating processes F26B 3/00) [1, 2006.01]
- 13/12 Regulating movement, tension, or position of material [1, 2006.01]
- 13/14 Rollers (sorbent surfaces F26B 13/26) [1, 2006.01]
- perforated (F26B 13/18 takes precedence; for 13/16 applying suction F26B 13/30) [1, 2006.01]
- 13/18 heated; cooled [1, 2006.01]
- Supporting materials by fluid jets, e.g. 13/20 air [1, 2006.01]
- • Arrangements of gas flames [1, 2006.01] 13/22

- Arrangements of devices using drying processes not involving heating (such processes per se
- using sorbent surfaces, e.g. bands or coverings on
- for applying pressure; for brushing; for
- for applying suction, e.g. through perforated
- Machines or apparatus for drying objects with progressive movement; Machines or apparatus with progressive movement for drying batches of material in compact form (F26B 13/00, F26B 17/00 take precedence; conveyors in general B65G) [1, 2006.01]
- with movement in the whole or part of a
- in a horizontal plane [1, 2006.01]
- involving several planes, one above the
- with movement in a path composed of one or more straight lines, e.g. compound [1, 2006.01]
- the lines being all horizontal or slightly
- the objects or batches of materials being carried by trays or racks [1, 2006.01]
- the objects or batches of materials being carried by wheeled trucks [1, 2006.01]
- the objects or batches of materials being carried by endless belts [1, 2006.01]
- the lines being all vertical or steeply
- the objects or batches of materials being carried by endless belts [1, 2006.01]
- in a zig-zag path [1, 2006.01]
- with movement in a helical path [1, 2006.01]
- Machines or apparatus for drying materials in loose, plastic, or fluidised form, e.g. granules, staple fibres, with progressive movement (F26B 13/00 takes
- with movement performed by belts carrying the materials; with movement performed by belts propelling the materials over stationary
- the belts being all horizontal or slightly inclined (F26B 17/08 takes precedence) [1, 2006.01]
- 17/06 the belts being all vertical or steeply inclined (F26B 17/08 takes precedence) [1, 2006.01]
- the belts being arranged in a sinuous or zig-zag 17/08 path [1, 2006.01]
- with movement performed by fluid currents, e.g. 17/10 issuing from a nozzle (F26B 3/08 takes precedence) [1, 5, 2006.01]
- with movement performed solely by 17/12 gravity [1, 2006.01]
- 17/14 the materials moving through a counter-current of gas [1, 2006.01]
- the materials passing down a heated 17/16 surface [1, 2006.01]
- 17/18with movement performed by rotating helical blades or other rotary conveyors moving materials in stationary chambers [1, 2006.01]
- 17/20 the axis of rotation being horizontal or slightly inclined [1, 2006.01]
- 17/22 the axis of rotation being vertical or steeply inclined [1, 2006.01]

17/24	with movement performed by shooting or throwing	21/08	<ul> <li>Humidity [1, 2006.01]</li> </ul>
	the materials <b>[1, 2006.01]</b>	21/10	• • Temperature; Pressure [1, 2006.01]
17/26	with movement performed by reciprocating or	21/12	• • Velocity of flow; Quantity of flow [1, 2006.01]
	oscillating conveyors propelling materials over stationary surfaces; with movement performed by reciprocating or oscillating shelves, sieves or	21/14	<ul> <li>using gases or vapours other than air or steam [1, 2006.01]</li> </ul>
17/28	trays [1, 2006.01] • with movement performed by rollers or discs with	23/00	<b>Heating arrangements</b> (using heated air or gases F26B 21/00) <b>[1, 2006.01]</b>
	material passing over or between them, e.g. suction drum, sieve [1, 2006.01]	23/02	<ul> <li>using combustion heating (F26B 23/10 takes precedence) [1, 2006.01]</li> </ul>
17/30	<ul> <li>with movement performed by rotary or oscillating containers; with movement performed by rotary</li> </ul>	23/04	<ul> <li>using electric heating (F26B 23/10 takes precedence) [1, 2006.01]</li> </ul>

21/04	• • partly outside the drying enclosure [1, 2006.01]	25/22	Controlling the drying process in dependence on
21/06	• Controlling, e.g. regulating, parameters of gas supply (F26B 21/14 takes precedence) [1, 2006.01]	<del>-</del>	liquid content of solid materials or objects [1, 2006.01]

#### F27 FURNACES; KILNS; OVENS; RETORTS

#### Note(s) [7]

- 1. This class <u>covers</u>:
  - furnaces, kilns, ovens, retorts, open sintering apparatus and other similar apparatus for heat treatment of materials or articles, and details or accessories therefor, in general;
  - the arrangement of electrical heating elements in or on furnaces.
- 2. This class <u>does not cover</u>:
  - combustion apparatus <u>per se</u>, i.e. apparatus for direct combination of oxygen gas and a burnable substance;
  - electrical heating elements per se;
  - processes carried on within the furnaces.
- 3. In this class, the following term is used with the meaning indicated:
  - "furnaces" covers kilns, ovens, or retorts.

## F27B FURNACES, KILNS, OVENS, OR RETORTS IN GENERAL; OPEN SINTERING OR LIKE APPARATUS (combustion apparatus F23; electric heating H05B)

#### Note(s)

Attention is drawn to the references and Notes following the title of class F27 and the Note (3) of section H.

Supports, screens, or the like for the charge within

Forming, maintaining, or circulating atmospheres in

the furnace (travelling or movable supports

F27D 3/12) [1, 2006.01]

liquids [1, 2006.01]

heating chambers [1, 2006.01]

Supplying steam, vapour, gases, or

- 7/04 Circulating atmospheres by mechanical means [1, 2006.01]
- Forming or maintaining special atmospheres or vacuum within heating chambers (F27D 7/02 takes precedence) [1, 2006.01]
- **9/00** Cooling of furnaces or of charges therein (F27D 1/00, F27D 3/00 take precedence) [1, 2006.01]
- 11/00 Arrangement of elements for electric heating in or on furnaces (electric heating per se H05B) [1, 2006.01]
- 11/02 Ohmic resistance heating [1, 2006.01]
- 11/04 with direct passage of current through the material being heated [1, 2006.01]
- 11/06 Induction heating, i.e. in which the material being heated, or its container or elements embodied therein, form the secondary of a transformer [1, 2006.01]
- 11/08 Heating by electric discharge, e.g. arc discharge [1, 2006.01]
  - Disposition of electrodes (automatic control of temperature G05D 23/00; electric discharge apparatus H01T; arrangements for feeding or guiding electrodes H05B 7/10; automatic control of power by positioning of electrodes H05B 7/144) [1, 3, 2006.01]
- with electromagnetic fields acting directly on the material being heated [1, 2006.01]
- 13/00 Apparatus for preheating charges; Arrangements for preheating charges [1, 2006.01]
- 15/00 Handling or treating discharged material; Supports or receiving chambers therefor [1, 2006.01]
- 15/02 Cooling [1, 2006.01]

11/10

- 17/00 Arrangement for using waste heat (heat-exchangers per se F28); Arrangement for using, or disposing of, waste gases (removing fumes in general B08B 15/00) [1, 2006.01]
- 19/00 Arrangement of controlling devices [1, 2006.01]
- 21/00 Arrangement of monitoring devices; Arrangements of safety devices [1, 2006.01]
- Observation or illuminating devices [1, 2006.01]
- Arrangements of indicators or alarms [1, 2006.01]
- 25/00 Devices for removing incrustations [2010.01]
- **27/00 Stirring devices for molten material** (F27D 3/14 takes precedence) **[2010.01]**

99/00

#### F28 HEAT EXCHANGE IN GENERAL

#### Note(s)

- 1. In this class, the following expressions are used with the meanings indicated:
  - "heat exchange" means the heating or cooling of a fluid or fluent solid by direct or indirect contact with a heated or cooled fluid or fluent solid;
  - · "heat transfer" means the heating or cooling of a fluid or fluent solid by direct contact with a heated or cooled surface or body.
- 2. Apparatus using heat exchange or heat transfer (as defined in Note (1) above) for specific purposes is classified either in subclass F28B or in the appropriate subclasses of, for example, classes F22, F24, F25, F26, or F27; if no such other subclass is appropriate, such apparatus is classified in subclass F28C or F28D.
- **STEAM OR VAPOUR CONDENSERS** (condensation of vapours B01D 5/00; condensation during pretreatment of gases prior to electrostatic precipitation of dispersed particles B03C 3/014; steam engine plants having condensers F01K; liquefaction of gases F25J; details of heat-exchange or heat-transfer arrangements of general application F28F)

1/00	Condensers in which the steam or vapour is separated from the cooling medium by walls, e.g. surface condenser [1, 2006.01]	5/00	Condensers employing a combination of the methods covered by groups F28B 1/00 and F28B 3/00; Other condensers [1, 2006.01]
1/02 1/04	<ul> <li>using water or other liquid as the cooling medium [1, 2006.01]</li> <li>employing moving walls [1, 2006.01]</li> </ul>	7/00	Combinations of two or more condensers, e.g. provision of reserve condenser [1, 2006.01]
1/06	<ul> <li>using air or other gas as the cooling medium [1, 2006.01]</li> </ul>	9/00	Auxiliary systems, arrangements, or devices [1, 2006.01]
1/08	• • employing moving walls [3, 2006.01]	9/02	<ul> <li>for feeding steam or vapour to condensers [1, 2006.01]</li> </ul>
3/00	Condensers in which the steam or vapour comes into direct contact with the cooling medium [1, 2006.01]	9/04	<ul> <li>for feeding, collecting, and storing cooling water or other cooling liquid [1, 2006.01]</li> </ul>
3/02	<ul> <li>by providing a flowing coating of cooling liquid on the condensing surface [1, 2006.01]</li> </ul>	9/06	<ul> <li>with provision for re-cooling the cooling water or other cooling liquid [1, 2006.01]</li> </ul>
3/04	• by injecting cooling liquid into the steam or vapour (F28B 3/08 takes precedence) [1, 2006.01]	9/08	• for collecting and removing condensate [1, 2006.01]
3/06	• by injecting the steam or vapour into the cooling liquid (F28B 3/08 takes precedence) [1, 2006.01]	9/10	<ul> <li>for extracting, cooling, and removing non- condensable gases [1, 2006.01]</li> </ul>
3/08	• with rotatable members <b>[1, 2006.01]</b>	11/00	Controlling arrangements with features specially adapted for condensers [1, 2006.01]

F28C HEAT-EXCHANGE APPARATUS, NOT PROVIDED FOR IN ANOTHER SUBCLASS, IN WHICH THE HEAT-EXCHANGE MEDIA COME INTO DIRECT CONTACT WITHOUT CHEMICAL INTERACTION (heat-transfer, heat-exchange or heat-storage materials C09K 5/00; fluid heaters having heat generating means F24H; with an intermediate heat-transfer medium coming into direct contact with heat-exchange media F28D 15/00-F28D 19/00; details of heat-exchange apparatus of general application F28F)

1/00	<b>Direct-contact trickle coolers, e.g. cooling towers</b> (building construction E04H 5/12; enclosed spaces cooled by trickle F25; component parts of trickle coolers F28F 25/00) <b>[1, 2006.01]</b>	1/16	<ul> <li>Arrangements for preventing condensation, precipitation or mist formation, outside the cooler (F28C 1/14 takes precedence) [3, 2006.01]</li> </ul>
1/02	• with counter-current only [1, 2006.01]	3/00	Other direct-contact heat-exchange
1/04	<ul> <li>with cross-current only [1, 2006.01]</li> </ul>		apparatus [1, 2006.01]
1/06	• with both counter-current and cross-current [1, 2006.01]	3/02	<ul> <li>the heat-exchange media both being gases or vapours [1, 2006.01]</li> </ul>
1/08	<ul> <li>Arrangements for recovering heat from exhaust steam [1, 2006.01]</li> </ul>	3/04	<ul> <li>the heat-exchange media both being liquids [1, 2006.01]</li> </ul>
1/10	• Arrangements for suppressing noise [1, 5, 2006.01]	3/06	<ul> <li>the heat-exchange media being a liquid and a gas or</li> </ul>
1/12	<ul> <li>Arrangements for preventing clogging by frost [3, 2006.01]</li> </ul>		vapour (temperators for cooling steam F22) <b>[1, 2006.01]</b>
1/14	<ul> <li>comprising also a non-direct contact heat exchange [3, 2006.01]</li> </ul>	3/08	<ul> <li>with change of state, e.g. absorption, evaporation, condensation (generating steam under pressure F22) [1, 2006.01]</li> </ul>

- one heat-exchange medium at least being a fluent solid, e.g. a particulate material [1, 2006.01]
- the heat-exchange medium being a particulate material and a gas, vapour, or liquid [1, 2006.01]
- 3/14 • the particulate material moving by gravity, e.g. down a tube [1, 2006.01]
- 3/16 • the particulate material forming a bed, e.g. fluidised, on vibratory sieves [1, 2006.01]
- 3/18 • the particulate material being contained in rotating drums [1, 2006.01]

F28D HEAT-EXCHANGE APPARATUS, NOT PROVIDED FOR IN ANOTHER SUBCLASS, IN WHICH THE HEAT-EXCHANGE MEDIA DO NOT COME INTO DIRECT CONTACT (heat-transfer, heat-exchange or heat-storage materials C09K 5/00; fluid heaters having heat generating means and heat transferring means F24H; furnaces F27; details of heat-exchange apparatus of general application F28F); HEAT STORAGE PLANTS OR APPARATUS IN GENERAL [4]

#### **Subclass index**

### HEAT-EXCHANGE APPARATUS WITHOUT INTERMEDIATE HEAT-TRANSFER MEDIA OR BODIES

With stationary conduit assemblies

for only one medium using: mass of fluid; trickle or film; the cooling effect of evaporation	1/00, 3/00, 5/00
for both media: by tubular conduits; by plate-like conduits	7/00, 9/00
With moving conduit assemblies	11/00
With fluidised bed	13/00
HEAT-EXCHANGE APPARATUS WITH INTERMEDIATE HEAT-TRANSFER MEDIA OR BODIES	
With the intermediate medium in closed tubes passing into or through the conduit walls	15/00
In which the intermediate medium or body is contacted successively by the other media	17/00, 19/00
HEAT STORAGE PLANTS OR APPARATUS	20/00
OTHER HEAT-EXCHANGE APPARATUS	21/00

- 1/00 Heat-exchange apparatus having stationary conduit assemblies for one heat-exchange medium only, the media being in contact with different sides of the conduit wall, in which the other heat-exchange medium is a large body of fluid, e.g. domestic or motor car radiators (F28D 5/00 takes precedence) [1, 2006.01]
- with the heat-exchange conduits immersed in the body of fluid [1, 2006.01]
- 1/03 • with plate-like or laminated conduits [4, 2006.01]
- 1/04 • with tubular conduits **[1, 2006.01]**
- 1/047 • the conduits being bent, e.g. in a serpentine or zig-zag [4, 2006.01]
- 1/053 • the conduits being straight **[4, 2006.01]**
- with the heat-exchange conduits forming part of, or being attached to, the tank containing the body of fluid [1, 2006.01]
- 3/00 Heat-exchange apparatus having stationary conduit assemblies for one heat-exchange medium only, the media being in contact with different sides of the conduit wall, in which the other heat-exchange medium flows in a continuous film, or trickles freely, over the conduits (F28D 5/00 takes precedence) [1, 2006.01]
- 3/02 with tubular conduits [1, 2006.01]
- 3/04 Distributing arrangements [1, 2006.01]
- 5/00 Heat-exchange apparatus having stationary conduit assemblies for one heat-exchange medium only, the media being in contact with different sides of the conduit wall, using the cooling effect of natural or forced evaporation [1, 2006.01]
- in which the evaporating medium flows in a continuous film or trickles freely over the conduits [1, 2006.01]

- 7/00 Heat-exchange apparatus having stationary tubular conduit assemblies for both heat-exchange media, the media being in contact with different sides of a conduit wall [1, 2006.01]
- 7/02 the conduits being helically coiled (F28D 7/10 takes precedence) [1, 2006.01]
- 7/04 the conduits being spirally coiled (F28D 7/10 takes precedence) [1, 2006.01]
- 7/06 the conduits having a single U-bend (F28D 7/10 takes precedence) [1, 2006.01]
- the conduits being otherwise bent, e.g. in a serpentine or zig-zag (F28D 7/10 takes precedence) [1, 2006.01]
- the conduits being arranged one within the other, e.g. concentrically [1, 2006.01]
- 7/12 the surrounding tube being closed at one end, i.e. return type (F28D 7/14 takes precedence) [1, 2006.01]
- 7/14 • both tubes being bent **[1, 2006.01]**
- 7/16 the conduits being arranged in parallel spaced relation (F28D 7/02-F28D 7/10 take precedence) [4, 2006.01]
- 9/00 Heat-exchange apparatus having stationary platelike or laminated conduit assemblies for both heatexchange media, the media being in contact with different sides of a conduit wall [1, 2006.01]
- 9/02 the heat-exchange media travelling at an angle to one another (F28D 9/04 takes precedence) [1, 2006.01]
- 9/04 the conduits being formed by spirally-wound plates or laminae [1, 2006.01]
- 11/00 Heat-exchange apparatus employing moving conduits [1, 2006.01]
- 11/02 the movement being rotary, e.g. performed by a drum or roller (F28D 11/08 takes precedence) [1, 2006.01]
- 11/04 • performed by a tube or a bundle of tubes **[1, 2006.01]**

11/06	• the movement being reciprocating or oscillating (F28D 11/08 takes precedence) <b>[1, 2006.01]</b>	17/02	<ul> <li>using rigid bodies, e.g. of porous material [1, 2006.01]</li> </ul>
11/08	<ul> <li>more than one conduit assembly performing independent movements, e.g. rotary bundle of tubes</li> </ul>	17/04	Distributing arrangements for the heat-exchange media [1, 2006.01]
	in a rotary drum <b>[1, 2006.01]</b>		
13/00	Heat-exchange apparatus using a fluidised bed [1, 2006.01]	19/00	Regenerative heat-exchange apparatus in which the intermediate heat-transfer medium or body is moved successively into contact with each heat-exchange medium [1, 2006.01]
		19/02	<ul> <li>using granular particles [1, 2006.01]</li> </ul>
	hange apparatus employing intermediate heat-transfer bodies [3]	19/04	<ul> <li>using rigid bodies, e.g. mounted on a movable carrier [1, 2006.01]</li> </ul>
15/00	Heat-exchange apparatus with the intermediate heat- transfer medium in closed tubes passing into or through the conduit walls [1, 2006.01]	20/00	<b>Heat storage plants or apparatus in general</b> (specially adapted for particular applications, <u>see</u> the relevant places, e.g. F24D 15/02); <b>Regenerative heat-exchange</b>
15/02	<ul> <li>in which the medium condenses and evaporates, e.g. heat-pipes [4, 2006.01]</li> </ul>		apparatus not covered by groups F28D 17/00 or F28D 19/00 [4, 2006.01]
15/04	• • with tubes having a capillary structure <b>[6, 2006.01]</b>	20/02	• using latent heat <b>[6, 2006.01]</b>
15/06	• • Control arrangements therefor [6, 2006.01]		
17/00	Regenerative heat-exchange apparatus in which a stationary intermediate heat-transfer medium or body is contacted successively by each heat-exchange medium, e.g. using granular particles [1, 2006.01]	21/00	Heat-exchange apparatus not covered by any of the groups F28D 1/00-F28D 20/00 [1, 4, 2006.01]

#### **WEAPONS; BLASTING**

#### F41 WEAPONS

#### Note(s) [4, 5]

- 1. This class <u>covers</u> also means for practice and training which may have aspects of simulation, e.g. in apparatus for so-called "military games", although simulators are generally covered by class G09.
- 2. In this class, the following terms or expressions are used with the meanings indicated:
  - "smallarm" means a firearm which is generally held with one or both hands for firing, but this term also includes a light machinegun which may be supported on a tripod or the like during firing;
  - "gun" means any weapon having a barrel and a trigger or firing mechanism for projecting a missile; it may be a piece of ordnance or a smallarm. It may use combustible or explosive propellant charges, air pressure, electromagnetism or other propulsive forces;
  - "revolver-type gun" means a gun having a revolving drum magazine, the chambers of which are used successively as firing chamber;
  - "revolver" means a revolver-type pistol;
  - "semi-automatic firearm" means a firearm from which one shot is fired after actuation of the trigger and which then returns to a condition for firing a subsequent shot upon renewed actuation of the trigger;
  - "automatic firearm" means a firearm which will continue firing so long as the initial firing pressure is maintained on the trigger;
  - "sighting" means bringing into visual coincidence a direction defined by a so-called "sighting" device with the direction of a target;
  - "aiming" means bringing a weapon to a direction differing from the sighting direction by corrections in order that the projectile may hit the target;
  - "laying" means setting a weapon in the correct position for hitting a target.
- 3. Attention is drawn to the definitions of "projectile", "missile" and "rocket" given in Note (2) following the title of class F42.

## F41A FUNCTIONAL FEATURES OR DETAILS COMMON TO BOTH SMALLARMS AND ORDNANCE, e.g. CANNONS; MOUNTINGS FOR SMALLARMS OR ORDNANCE [5]

#### Note(s) [5]

- 1. This subclass <u>covers</u> those features or details which are considered to be of a kind generally applicable to, or to be concerned with intrinsic functions common to, both smallarms and ordnance.
- 2. Such features or details are classified in this subclass, even if they are stated to be applied only to smallarms or only to ordnance.
- 3. Attention is drawn to the definitions given in Note (2) following the title of class F41.

**F41C SMALLARMS, e.g. PISTOLS OR RIFLES** (projecting missiles without use of explosive or combustible propellant charge F41B); **ACCESSORIES THEREFOR** [5]

# Note(s) [5]

Attention is drawn to the definitions in Note (2) following the title of class F41.

## **Subclass index**

KINDS OF SMALLARMS	
Pistols, revolvers	3/00
Shoulder-fired smallarms	7/00
Other smallarms, e.g. hidden, muzzle-loaded, underwater	9/00
BUTTS, BUTT PLATES, STOCKS	23/00
ACCESSORIES; OTHER DETAILS	27/00
WEARING OR CARRYING-MEANS	33/00

3/00	<b>Pistols</b> (for shooting bolts into concrete constructions,	7/00	Shoulder-fired smallarms, e.g. rifles, carbines
	metal walls or the like B25C) [1, 3, 5, 2006.01]		or shotguns [1, 3, 2006.01]
3/02	• Signal pistols, e.g. Very pistols [1, 2006.01]	7/02	• Pump-action guns, i.e. guns having a reciprocating
3/04	• Starting pistols; Alarm pistols [1, 2006.01]		handgrip beneath the barrel for loading or
3/06	• Cap-firing pistols, e.g. toy pistols [1, 2006.01]		cocking <b>[1, 2006.01]</b>
3/08	• • with band supply [1, 2006.01]	7/04	<ul> <li>with reciprocating handgrip under the buttstock for</li> </ul>
3/10	• • with rotatable cap carrier, e.g. drum [5, 2006.01]		loading or cocking <b>[1, 2006.01]</b>
3/12	• • with slidable cap carrier, e.g. clip (F41C 3/08	7/06	• Lever-action guns, i.e. guns having a rocking lever
	takes precedence) [5, 2006.01]		for loading or cocking [1, 2006.01]
3/14	• Revolvers (F41C 3/10 takes precedence) <b>[5, 2006.01]</b>	7/11	<ul> <li>Breakdown shotguns or rifles [5, 2006.01]</li> </ul>
3/16	• • Hinge-frame revolvers [5, 2006.01]		

9/00	Other smallarms, e.g. hidden smallarms or smallarms specially adapted for underwater	23/18	• characterised by the material used (F41C 23/08 takes precedence) <b>[5, 2006.01]</b>
0.400	use [1, 3, 2006.01]	23/20	• Butts; Butt plates; Mountings therefor (F41C 23/08,
9/02	• Concealed pistols, e.g. in pencils [1, 2006.01]	22/22	F41C 23/10 take precedence) [5, 2006.01]
9/04	• Walking-stick guns [1, 2006.01]	23/22	• Stocks having space for the storage of
9/06	• Smallarms specially adapted for underwater		objects [5, 2006.01]
0.700	use [1, 2006.01]	27/00	Accessories; Details or attachments not otherwise
9/08	<ul> <li>Muzzle-loading smallarms; Smallarms with flintlock mechanisms; Accessories therefor [5, 2006.01]</li> </ul>		provided for [1, 2006.01]
	mechanisms, Accessories diefetol [3, 2000.01]	27/04	<ul> <li>Arrangements for mounting spades or shields [1, 2006.01]</li> </ul>
<u>Details</u>		27/06	<ul> <li>Adaptations of smallarms for firing grenades, e.g. rifle grenades, or for firing riot-control ammunition;</li> </ul>
23/00	Butts; Butt plates; Stocks [1, 2006.01]		Barrel attachments therefor [1, 2006.01]
23/02	<ul> <li>Attachment of slings [1, 2006.01]</li> </ul>	27/16	Smallarms combined with thrusting or cutting
23/04	Folding or telescopic stocks or stock		weapons; Bayonets; Bayonet mounts [5, 2006.01]
	parts [5, 2006.01]	27/18	• • Bayonets; Bayonet mounts <b>[5, 2006.01]</b>
23/06	Stocks specially adapted for recoil	27/20	<ul> <li>Attachments for wire cutting [5, 2006.01]</li> </ul>
	reduction [5, 2006.01]	27/22	<ul> <li>Balancing or stabilising arrangements [5, 2006.01]</li> </ul>
23/08	• • Recoil absorbing pads [5, 2006.01]	22/00	Manus for recoving or covering
23/10	• Stocks or grips for pistols, e.g. revolvers (F41C 23/12 takes precedence) [5, 2006.01]	33/00	Means for wearing or carrying smallarms [1, 2006.01]
23/12	<ul> <li>Auxiliary stocks for stabilising, or for transforming pistols, e.g. revolvers, into shoulder-fired guns [5, 2006.01]</li> </ul>	33/02	<ul> <li>Holsters, i.e. cases for pistols having means for being carried or worn, e.g. at the belt or under the arm [1, 2006.01]</li> </ul>
23/14	<ul> <li>Adjustable stock or stock parts, i.e. adaptable to</li> </ul>	33/04	<ul> <li>Special attachments therefor [1, 2006.01]</li> </ul>
	personal requirements, e.g. length, pitch, cast or drop [5, 2006.01]	33/06	• Containers for carrying smallarms, e.g. safety boxes, gun cases (F41C 33/02 takes
23/16	<ul> <li>Forestocks; Handgrips; Hand guards [5, 2006.01]</li> </ul>	22 /00	precedence) [5, 2006.01]
		33/08	• Handles for carrying smallarms [5, 2006.01]
EA1E	ADDADATUS EOD I AUNCHING DDOIECTH ES OD	MISSII ES I	EDOM BADDELS og CANNONS (smallarms E41C).

F41F APPARATUS FOR LAUNCHING PROJECTILES OR MISSILES FROM BARRELS, e.g. CANNONS (smallarms F41C); LAUNCHERS FOR ROCKETS OR TORPEDOES; HARPOON GUNS (functional features or details common to both smallarms and ordnance, mountings therefor F41A; projecting missiles without use of explosive or combustible propellant charge F41B) [5]

# **Subclass index**

LAUNCHING FROM BARRELS	1/00
ROCKET OR TORPEDO LAUNCHERS	3/00
LAUNCHING GRAVITY-PROPELLED PROJECTILES OR MISSILES	5/00
OTHER LAUNCHING APPARATUS.	7/00

1/00	Launching apparatus for projecting projectiles or missiles from barrels, e.g. cannons (F41F 3/00 takes precedence); Harpoon guns [1, 2006.01]	3/055 • • Umbilical connecting means <b>[4, 2006.01]</b> 3/058 • • Means for removing duds or misfires <b>[4, 2006.01]</b> 3/06 • • from aircraft <b>[1, 2006.01]</b>
1/06	• Mortars (base plates therefor F41A 23/54) [1, 2006.01]	3/065 • • • Rocket pods, i.e. detachable containers for launching a plurality of rockets [5, 2006.01]
1/08	<ul> <li>Multibarrel guns, e.g. twin guns [5, 2006.01]</li> </ul>	3/07 • • Underwater launching-apparatus [4, 2006.01]
1/10	<ul> <li>Revolving-cannon guns, i.e. multibarrel guns with the barrels and their respective breeches mounted on a rotor; Breech mechanisms therefor [5, 2006.01]</li> </ul>	<ul> <li>3/073 • Silos for rockets, e.g. mounting or sealing rockets therein (F41F 3/077 takes precedence) [5, 2006.01]</li> <li>3/077 • Doors or covers for launching tubes [5, 2006.01]</li> </ul>
3/00	Rocket or torpedo launchers [1, 2006.01]	3/08 • for marine torpedoes <b>[1, 2006.01]</b>
3/04	• for rockets [1, 2006.01]	3/10 • • from below the surface of the water <b>[1, 2006.01]</b>
3/042	<ul> <li>the launching apparatus being used also as transport container for the rocket [4, 2006.01]</li> </ul>	5/00 Launching-apparatus for gravity-propelled missiles or projectiles (from aircraft B64D 1/04) [1, 2006.01]
3/045	adapted to be carried and used by a person, e.g. bazookas (F41F 3/042 takes  precedence) 14, 2006 011	5/04 • from ships, e.g. for mines, for depth charges [1, 2006.01]

7/00

precedence) **[4, 2006.01]**3/048 • • Means for imparting spin to the rocket before

launching [4, 2006.01]

apparatus [4, 2006.01]

3/052 • • Means for securing the rocket in the launching

Launching-apparatus for projecting missiles or

takes precedence) [1, 3, 2006.01]

projectiles otherwise than from barrels (F41F 3/04

1/00	<b>Sighting devices</b> (for indirect laying of fire F41G 3/16;	3/00	Aiming means; Laying means (sighting devices
1/01	<ul><li>bombsights F41G 3/24) [1, 2006.01]</li><li>characterised by the visual combination effect of the</li></ul>		F41G 1/00; determining direction, distance or velocity by use of radio or other waves G01S; computers G06;
	respective geometrical forms of fore and rear sight	2 / 2 2	aerials H01Q) [1, 2006.01]
4 / 0.0	(F41G 1/42 takes precedence) <b>[5, 2006.01]</b>	3/02	• using an independent line of sight [1, 2006.01]
1/02	• Foresights [1, 2006.01]	3/04	• for dispersing fire from a battery [1, 2006.01]
1/027	• • with lens [5, 2006.01]	3/06	• with rangefinder (rangefinders <u>per se</u>
1/033	• • adjustable [5, 2006.01]	2/00	G01C) [1, 2006.01]
1/04	• • Protection means therefor [1, 2006.01]	3/08	<ul> <li>with means for compensating for speed, direction, temperature, pressure, or humidity of the atmosphere</li> </ul>
1/06	• Rearsights [1, 2006.01]		(measuring G01) [1, 2006.01]
1/08	• • with aperture [1, 2006.01]	3/10	<ul> <li>with means for compensating for canting of the</li> </ul>
1/10	• • with notch [1, 2006.01]	3, 10	trunnions [1, 2006.01]
1/12	• • with line or mark other than notch [1, 2006.01]	3/12	<ul> <li>with means for compensating for muzzle velocity or</li> </ul>
1/14	• • with lens [1, 2006.01]		powder temperature [1, 2006.01]
1/16	<ul> <li>Adjusting mechanisms therefor; Mountings therefor [1, 2006.01]</li> </ul>	3/14	<ul> <li>Indirect aiming means [1, 2006.01]</li> </ul>
1/17	• • Convertible sights, i.e. sets of two or more	3/16	<ul> <li>Sighting devices adapted for indirect laying of</li> </ul>
1/1/	sights brought into the sight line		fire [1, 2006.01]
	optionally <b>[5, 2006.01]</b>	3/18	Auxiliary target devices adapted for indirect laying
1/18	Clicking indicators with spring		of fire [1, 2006.01]
	detents [1, 2006.01]	3/20	• • specially adapted for mountain
1/20	• • • coarse and fine [1, 2006.01]	2/22	artillery [1, 2006.01]
1/22	• • • Friction clamps [1, 2006.01]	3/22	<ul> <li>for vehicle-borne armament, e.g. on aircraft [1, 2006.01]</li> </ul>
1/24	<ul> <li>rack-and-pinion; lever; linkwork [1, 2006.01]</li> </ul>	3/24	Bombsights [1, 2006.01]
1/26	• • • screw [1, 2006.01]	3/24	Teaching or practice apparatus for gun-aiming or
1/28	• • • wedge; cam; eccentric [1, 2006.01]	3/20	gun-laying [1, 2006.01]
1/30	<ul> <li>Reflecting sights specially adapted for smallarms or</li> </ul>	3/28	Small-scale apparatus (relief models or maps)

### F42 AMMUNITION; BLASTING

### Note(s) [2, 4, 5]

- 1. This class <u>covers</u> also means for practice or training which may have aspects of simulation, although simulators are generally covered by class G09.
- 2. In this class, the following terms or expressions are used with the meanings indicated:
  - "primer" effects the first explosive step in the sequence of explosion;
  - "percussion cap" means a primer which is struck to explode;
  - "igniter" effects the first spark-producing or heat-producing step but may not be explosive;
  - "firing-means" or "initiator" (used respectively in the arts of weaponry and blasting) means a device acting directly on the primer, which device may or may not form part of the fuze;
  - "detonator" or "detonator charge" means a charge used to amplify the explosion of the primer;
  - "fuze" means an assembly or mechanism which incorporates safety and arming means in order that the explosion can only take place under certain conditions; this assembly or mechanism determines also the moment (instantaneous or delayed) or the manner, e.g. impact, proximity, hydrostatic pressure, of the firing;
  - "ammunition" covers propulsive charge and projectile whether or not forming a single body, unless otherwise made clear;
  - "projectile", "missile" or "projectile or missile" means any body which is projected or propelled;
  - "guided missile" means projectile or missile which is guided during at least part of its trajectory;
  - "rocket" means projectile or missile which is self-propelled, during at least part of its trajectory, by a rocket engine, i.e. by a jet-propulsion engine carrying both fuel and oxidant therefor;
  - "fuse" or "fuse cord" means a continuous train of explosive enclosed in a usually flexible cord or cable for setting-off an explosive charge in the art of blasting.

	fuzes F42C 9/00) [1, 2006.01]	14/00	precedence) [5, 2006.01]
1/14	<ul> <li>operating at a predetermined distance from ground or</li> </ul>	14/02	• for hand grenades [5, 2006.01]
	target by means of a protruding member [1, 2006.01]	14/04	• for torpedoes, marine mines or depth charges
2/00	Eugas actuated by amagure to a liquid a g can vector	14/06	(influenced marine mines F42B 22/04) <b>[5, 2006.01]</b>
3/00	Fuzes actuated by exposure to a liquid, e.g. sea-water (F42C 5/00 takes precedence; time fuzes	14/06	• for fall bombs [5, 2006.01]
	F42C 9/00) [1, 2006.01]	14/08	• for land mines <b>[5, 2006.01]</b>
E /00	Firm a street of his arm a sure to a more determined	15/00	Arming-means in fuzes; Safety means for preventing
5/00	Fuzes actuated by exposure to a predetermined ambient fluid pressure [1, 2006.01]		premature detonation of fuzes or charges [1, 2006.01]
5/02	• barometric pressure [1, 2006.01]	15/16	• wherein the firing pin is displaced out of the action
3/02	barometric pressure [1, 2000.01]		line for safety (F42C 15/40 takes
7/00	Fuzes actuated by application of a predetermined	15/10	precedence) [1, 2006.01]
	mechanical force, e.g. tension, torsion, pressure (by	15/18	<ul> <li>wherein a carrier for an element of the pyrotechnic or explosive train is moved (F42C 15/40 takes</li> </ul>
	ammunition impact F42C 1/00; by exposure to a		precedence) [1, 5, 2006.01]
	predetermined ambient fluid pressure	15/184	<ul> <li>using a slidable carrier [5, 2006.01]</li> </ul>
	F42C 5/00) <b>[1, 2006.01]</b>	15/188	<ul> <li>using a shuable carrier [5, 2006.01]</li> <li>using a rotatable carrier [5, 2006.01]</li> </ul>
7/02	Contact fuzes, i.e. fuzes actuated by mechanical	15/192	<ul> <li>rotatable in a plane which is parallel to the</li> </ul>
	contact between a stationary ammunition, e.g. a land	13/132	longitudinal axis of the projectile [5, 2006.01]
	mine, and a moving target, e.g. a person (F42C 7/12	15/196	• • • by the action of centrifugal or inertia forces
7/04	<ul><li>takes precedence) [1, 2006.01]</li><li>actuated by applying pressure on the ammunition</li></ul>	15/ 150	on the carrier body, e.g. the carrier having eccentrically mounted weights or eccentric
	head [5, 2006.01]		centre of gravity [5, 2006.01]
7/06	• • • and comprising pneumatic or hydraulic	15/20	wherein a securing-pin or latch is removed to arm the
= /00	retarding means [5, 2006.01]	15/20	fuze, e.g. removed from the firing pin (F42C 15/40
7/08	• • of release type, i.e. actuated by releasing pressure		takes precedence) [1, 2006.01]
7/10	from the ammunition head [5, 2006.01]	15/21	• • using spring action (F42C 15/23 takes
7/10	• of antenna type [5, 2006.01]		precedence) [5, 2006.01]
7/12	<ul> <li>Percussion fuzes of the double-action type, i.e. fuzes cocked and fired in a single movement, e.g. by</li> </ul>	15/22	<ul> <li>using centrifugal force (F42C 15/23 takes</li> </ul>
	pulling an incorporated percussion pin or hammer		precedence) [1, 2006.01]
	(percussion caps F42C 19/10) <b>[5, 2006.01]</b>	15/23	<ul> <li>by unwinding a flexible ribbon or</li> </ul>
	(percussion cups 1 120 15/10) [5, 2000/01]		tape <b>[5, 2006.01]</b>
9/00	Time fuzes; Combined time- and percussion- or	15/24	<ul> <li>wherein the safety or arming action is effected by</li> </ul>
	pressure-actuated fuzes; Fuzes for timed self-		inertia means (F42C 15/196, F42C 15/20 take
	destruction of ammunition [1, 2006.01]		precedence) [1, 2006.01]
9/02	<ul> <li>the timing being caused by mechanical</li> </ul>	15/26	• • using centrifugal force [1, 2006.01]
	means [1, 2006.01]	15/28	• operated by flow of fluent material, e.g. shot, fluids
9/04	• • by spring motor [1, 2006.01]		(F42C 15/26 takes precedence) [1, 2006.01]
9/06	<ul> <li>by flow of fluent material, e.g. shot,</li> </ul>	15/285	• • stored within the fuze housing <b>[5, 2006.01]</b>
	fluids <b>[1, 2006.01]</b>	15/29	operated by fluidic oscillators; operated by
9/08	<ul> <li>the timing being caused by chemical action, e.g. of acids [1, 2006.01]</li> </ul>		dynamic fluid pressure, e.g. ram-air operated [5, 2006.01]
9/10	• the timing being caused by combustion [1, 2006.01]	15/295	<ul> <li>operated by a turbine or a propeller; Mounting</li> </ul>
9/12	<ul> <li>with ring combustion elements [1, 2006.01]</li> </ul>		means therefor <b>[5, 2006.01]</b>
9/14	• Double fuzes; Multiple fuzes [1, 2006.01]	15/30	• • of propellant gases, i.e. derived from propulsive
9/16	<ul> <li>for self-destruction of ammunition [1, 2006.01]</li> </ul>		charge or rocket motor [1, 2006.01]
9/18	• • when the spin rate falls below a predetermined	15/31	• • generated by the combustion of a pyrotechnic or
27.10	limit, e.g. a spring force being stronger than the		explosive charge within the fuze [5, 2006.01]
	locking action of a centrifugally-operated	15/32	• operated by change of fluid pressure (F42C 5/00,
	lock <b>[5, 2006.01]</b>	. <b>.</b>	F42C 15/29 take precedence) [1, 2006.01]
11 /00	Electric fuzza (provimity fuzza E42C 12/00: -ltri-	15/33	• • by breaking a vacuum or pressure
11/00	Electric fuzes (proximity fuzes F42C 13/00; electric igniters F42C 19/12) [1, 2006 01]		container <b>[5, 2006.01]</b>
	igniters F42C 19/12) [1, 2006.01]		

	preventing premature detonation F42C 15/00) [1, 2006.01]	99/00 Subject matter not provided for in other groups of this subclass [2006.01]	
19/0	( 8 , 3	21/00 Checking fuzes; Testing fuzes [1, 2006.01]	
<b>17/0</b> 17/0 17/0	2 • Fuze-setting keys [1, 2006.01]	19/12 • • electric [1, 2006.01] 19/14 • • operable also in the percussion mode [5, 2006.01]	
15/4	or mine fields [5, 2006.01]  4 • Arrangements for disarming, or for rendering harmless, fuzes after arming, e.g. after launch [5, 2006.01]	detonators, dispersed around a warhead, one of the primers or detonators being selected for directional detonation effects [5, 2006.01]  19/10  • Percussion caps [1, 2006.01]	he
15/4	electrically <b>[1, 2006.01]</b> 2 • from a remote location, e.g. for controlled mines	<ul> <li>19/09 • Primers or detonators containing a hollow charge [5, 2006.01]</li> <li>19/095 • Arrangement of a multiplicity of primers or</li> </ul>	
15/4	(F42C 3/00 takes precedence) [1, 2006.01]	Detonators [1, 2006.01] 19/085 • Primers for caseless ammunition [5, 2006.01]	
15/3	of an element (F42C 15/31 takes precedence) [1, 2006.01]  wherein arming is effected by chemical action	missiles <b>[5, 2006.01]</b> 19/08 • Primers (initiators for blasting cartridges F42B 3/10	0);
15/3	blocking-member in the pyrotechnic or explosive train between primer and main charge (F42C 15/18, F42C 15/40 take precedence) [1, 2006.01]  • wherein arming is effected by combustion or fusion	<ul> <li>19/04 • Protective caps [1, 2006.01]</li> <li>19/06 • Electric contact parts specially adapted for use with electric fuzes [1, 2006.01]</li> <li>19/07 • Nose-contacts for projectiles or</li> </ul>	l
